1799. TT and SVGA Scan Rate?

Newsgroup: comp.sys.atari.st
Date: 1996-04-26 00:00:00 UTC
From: fl@zap.io.org
Message-ID: <4lqpq3$gme@zap.io.org>
Source record: 146178

I recently got a Compac QVision 150 SVGA monitor to use with my new TT (yet another Don Thomas special). After the computer and monitor have been on for a while (in TT medium or ST high resolution) the monitor starts putting out a high pitched whine (roughly 10 kHz.) that is loud enough and pervasive enough to get really annoying, especially during longer computing sessions.

I plan to take the monitor back to the place where I got it, to see if this can be fixed, but I fear that once I get it there, it will not exhibit this behaviour, as it won't be hooked up to a TT.

Does anyone know the scan rates that the TT uses for its various screen resolutions? I know that TT medium doesn't put out a true 640 by 480 image (at least as far as the SVGA is concerned); could this have something to do with the whine?

Could someone at least provide me with the proper numbers to quote to the service person at the store; somehow mentioning Atari in a PC store gets you a lot of dumb looks...

Thanks in advance.

1801. Weird Space Quest error

Newsgroup: comp.sys.atari.st
Date: 1996-04-26 00:00:00 UTC
From: Michael.Hill@den.mmc.com
Message-ID: <4lr7jp$3tk@tel.den.mmc.com>
Source record: 146180

I'm having a strange problem with Space Quest I (whether playing from
the original disks or backups). Saving and restoring games used to
work fine; I used the first 4 positions, up to the first time you enter
the cavern with the grate, and had no trouble restoring from there.
Recently, though, I can save up to standing outside the pod after
crash-landing on the planet (Kerona?); but if I save anytime after
crossing the bridge, restoring causes the drive to make a horrible
grinding noise (sounds like it's ripping itself apart!), then an error
dialog "Read error: seek error". So maybe it's trying to seek to
a nonexistent track number. But the files are regular TOS files, and
copying them to another disk works normally.

Has anybody seen this? It's a real drag, as it makes the game almost
unplayable! :^(

TIA for any help.

1802. Alternate Harddisk Drivers for a TT

Newsgroup: comp.sys.atari.st
Date: 1996-04-26 00:00:00 UTC
From: <>
Message-ID: <4lredj$pqs@nw003.infi.net>
Source record: 146181

I am looking into alternate drivers to use instead of AHDI 5.x that came with my new TT. I have ICD 6.5.5 and it is nice but I wanted to insure maximum compatibility between my various setups. I plan to have Mint/Mintnet, Magic/Thing and Linux all on the machine, not running at the same time of course. :-) I played with CBHD a little last night and while I got it running it seemed to be causing Magic/Thing some problems. I also had BigDOS loaded to see if the combination could work. With them both loaded I couldn't run any programs, anything I double clicked did nothing and start from the Magic menu caused bombs and a reboot. I did replace my magxboot with the one from CBHD. I am currently using Magic 2.01 so it might be that. I have ordered HDDriver 4.51 from Toad and may upgrade Magic but am putting it off since I have seen as many problems as compliments about Magic 4.0. Any opinions or pointers are appreciated. If anyone has decent english docs for CBHD I would like to see them.

> It keeps you busy and off the streets, Katherine :-)

You know what really annoys me, it's not the German menus but the docs themselves. You have to get those German text file translators in order to read those read me's. That's why I couldn't use LZH which is a TTP in German(I realy hate TTP's unless I can double-click on a file and let it work it out). I finally found the English doc and just set it to so unpack a LZH file when I click on it, but since I got DC-Sea which makes self-extract archieves I ditched LZH. I'm sure in other non-English speaking countries they do the same thing with PD stuff.

BTW, how's a college student like yourself find the time for ST translation. I had barely enough time for playing games and IRC chats :)

From: eretic@tiac.net
Message-ID: <4lrg2l$hrd@news.tiac.net>
Source record: 146184

I have Ultrascipt for the Atari ST. But my .RSC file for the program is crapped out on my install floppy.

I need just the .RSC for the 1 meg version of US. The one designed NOT for the Atari Laser, but for HP's and Dot Matrix printers.

The reason I need this, is I wish to print a bunch of postscript files from PC linux, but their ghostscript has some sorry pixelated fonts, but I have the full 35 font set for Ultrascript still, and I have Gemulator 4.15. And seeing how fast Gemulatore is, I wouldn't mind booting Win 95 to get some linux docs printed out.

Also, looking for Calamus SL with ALL the modules at a reasonable cost.

I already have many Calamus fonts, as well as the original Calamus Font editor, and Cal Assistant for Calamus 1.09.

Source record: 146186

Hello,

I'm looking for the following three items. They are Infocom game
packages dating from approximately 1987-88. What I want is the following:

Zork Trilogy -- In one package (box says Zork Trilogy on it)
Must include coin in package.

Enchanter Trilogy -- Enchanter, Sorcerer, and Spellbreaker in a special
slipcase that says 'Enchanter Trilogy'

Classic Mystery Library -- Moonmist, Witness, and Suspect in a special
slipcase that says 'Classic Mystery Library'

All game must include complete packaging in good condition, ie, the box,
disk, and ALL packaging elements must be included. If you're unsure, let
me know what's included, I'll tell you if anything is missing.

Any computer format will do.

Thanks.

Source record: 146187

Going slightly off thread I have written a Mac program that reads Mac files resource forks and extracts any Icons and saves them as Atari Colour Icons in an Atari style resource file that at least Ease and Interface seem to find acceptable.

The main problem was the colour mapping table but the table Interface generates when it save resource files as C source seemed to be the best approxiamation of an RGB table for the Atari while the Macs was easy to get, then put them in the same scale and find the closest matches.

: Hi, I have a falcon and a SVGA 14" Acer 34T.
: If I add a graphic card like screen blaster or blow up, what are the good
: things about it.

ScreenBlaster and BlowUp are *not* graphic cards, they are just a small
hardware-hack that increases the speed of the original videochip.

: I mean, can I get something like 800*600*true colors?

You have to speed up the Falcon's bus to something like 25MHz! There is
currently only one speeder that can do this today (The Polish SpeedUp), but
if you wait a bit, Black Scorpion's Nemesis (Or whatever.) will also do this.

: Or do I get more memory available when I work under 640*480*256?

No, absolutely not. You'll need a new graphic card (A Nova-card) to to this,
as these cards have their own videchip and videoRAM. In addition to enhancing
the graphics dramatically, they will also speed up your Falcon. So if you can
afford one...

If you just want to get a larger work area and perhaps a virtual screen, I'll
recommend ScreenBlaster or BlowUp. They're extremely easy to install and are
very reliable. You can also get a freeware software-only solution like Videl
Inside, which will give you something like 892x528 in 16 and 256 colours.

Hi,
I've been using Nvdi v4.10 for a few months and recently I've
noticed it slow down somewhat and so I cleared the system except for
NVDI & xcontrol and ran Gembench, instead if the 286 6ncrease when I
first ran it a few months ago I only got 186% and the control pannel
had the 4 parameter boxes greyed out.
I re-installed it on a different partition and it worked fine
and I then copied the NVDI.Prg to C and it slowed back down again!
Does anyone have any idea what is going on and how to fix it??? I'd
really appeciate some help with this so thanks in advance.

Thanks very much ...

and

You should have quoted the rest of my posting too. I explained why I wrote "RTFM". In one of the first english lines in - I think it was SCC.TXT - is a sentence were Harun describes the capabilites of each serial port in the TT (in English !). So I assumed, that you haven't read it.

About 2 weeks ago, I posted a message stating I am interested in buying an Atari Lazer printer. Someone responded to me via e-mail for a SLM804 (I think that was the number). If you were that person (all I do remember it was in Canada) PLEASE re e-mail me your address I am going to purchase it for the agreed upon price we set (I need to know where to send my money in two weeks).

My moniterm comes into the Mega ST through a graphics card for the
moniterm. I'd think you would need the same thing for the TT although
it does have a few extra graphics modes so maybe someone else out there
knows for sure. Wayne

1820. WANTED: Dealers for SwapMeet: Pacific NorthWest!

Newsgroup: comp.sys.atari.st
Date: 1996-04-26 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <4ls9dp$rok@kelly.teleport.com>

The next SwapMeet is Monday, May 6th, 1996.

WANTED: Dealers to sell at Upcoming Swap Meets. Dealerships sought fall into such Categories as Computer Dealers, all kinds. All kinds of Computer HardWare, SoftWare, Peripherals & Accessories for ALL Computer Makes and Types.

Also Sought are Dealers in Video Gaming Equipment, such as Video Game Consoles, Cartidges, Video Game CD Players and Video Game CDs. ALL Video Game Makes and Types. ALL Video Game Consoles, Cartridges, CDs, Peripherals & Accessories.

On the May 6th SwapMeet, we will be Raffling off a Panasonic Printer! Anyone showing up can win. Just be their for the Drawing. The first Ticket is ***FREE***! Additional Tickets are a Dollar each. This is One of Many good reasons to come to Our SwapMeets.

Recruiting New Dealers with Membership for Dealer Value. You could setup at a full year of swapmeets, 12 Monthly swapmeets at $10 a Meet, for $120 a year, or join our group and setup ***FREE*** for a year for ONLY $50! Greater than a 50% Savings!

Also Wanted are Dealers in ALL Types of Electronics.

WANTED are Dealers in Ham Radio, CB Radio, Music CDs and other Recorded Music. Stereo Equipment also Wanted.

Also Wanted are VCR's, Video Tapes, TVs and Satelite Gear.

This is an ALL Computers, Game Machine and Electronics Swap Meet!!

Small Businesses, and Dealers Welcome and Wanted!!

NO ADMISSION CHARGE!!! PLENTY OF FREE PARKING!!! NO ADMISSION CHARGE!!!

TABLES $10! TABLES, FIRST COME, FIRST SERVE!

Swap Meet Location in Portland, Oregon. USA. At 1819 N.W. Everett St. at the NorthWest Service Center On the First Monday of each Month.

To find out about more about the Swap Meet call our 24 Hour Recorded info line at (503)650-7196 or for Live info, call from 3 PM - Midnight, Monday - Thursday, Friday 3 PM - 6 PM. Please call, especially dealers at: (503)256-9974 (VOICE/VOICE MESSAGING), leave your home number if Ben is not answering!

Reply in E-Mail to bensmith@teleport.com. Or Call Ben Anytime at

>completely replaces it.

Hmmmm. I never thought that was a very good idea.... MagiC is good,
but never IMHO good enough to _totally_ replace the OS, especially for
those many many, old and tricky programs that are not compatible with
programs like Magic. IMO it would be a good idea to get a TOS
switcher so you can use TOS 2.06, and your current TOS (1.6 ???), to
solve any compatibility problems, and then buy magic, and fall back to
TOS when you want !!!

>a URL. It says "resolving host" and after a minute or two, it stops
>resolving and it opens a window with nothing in it! However, a friend goes
>further with his ST.

Look in your DEFAULT.CFG and make sure that you have set the Domain Name
Server (DNS) properly according to your service provider. They should have
given you the ip address of that server when you signed up for the service.

If this is not the problem, then check to be sure that you have a SLIP
connection. If your IP address is static, make sure that you have it set
properly in the config. If it is dynamic, make sure that you have the $GET_IP
set up correctly in the dial.scr file (same dir as default.cfg). STiK will
also not work with a CSLIP connection, so be sure of that, too!

Hope this helps ya! -gkelly@sat.net-

1825. Why a graphic card?

Newsgroup: comp.sys.atari.st
Date: 1996-04-26 00:00:00 UTC
From: Andre_Leistner@b.maus.de
Message-ID: <199604262357.a6878@b.maus.de>
Source record: 146204

In Msg A6302@B, Katherine L Ellis (kellis@mtholyoke.edu) wrote:

>If I add a graphic card like screen blaster or blow up, what are the
>good things about it.

The good thing is that you'll have a higher resolution, i.e. more room on the screen. If you're doing some word processing, drawing, painting or spread sheet calculations then you'll soon appreciate the improved overview over your documents.

>I mean, can I get something like 800*600*true colors?

No. The best resolution I achieved with a ScreenBlaster was 896x624x16 colours at 68 Hz. I also tried to improve the 256-colour modes but the slowdown in system performance and the high memory consumption kept me from experimenting too long. I finally worked with 600x800x16 at 70 Hz for quite a while (now I have a Nova graphics card).

Note that graphics cards like BlowUp and ScreenBlaster are just extensions to the Falcon's internal video system. Since the video system uses normal RAM for storing the screen picture and the system bus for transferring it to the screen any higher resolution will decrease the amount of memory available to applications and it will cause a slowdown of the system's speed. Especially all resolutions with >= 256 colours become more or less unusable at higher resolutions.

If the video system refreshes the screen display (70 times in a second if it's 70 Hz) it uses the system bus, thus preventing the CPU from doing any calculations. Now, the higher the resolution is the longer the video system needs to refresh the screen (more data has to be transferred) and the longer it will lock the system bus causing the slowdown in performance. That's why there are enhancements for increasing the bus speed (I think BlowUp comes with that option) which can compensate the slowdown effect.

AFAIK the Nova graphics card is the only 'real' graphics card for the Falcon. It comes with it's own memory and video system. Thus, higher resolutions will not cause any system slowdown and a greater amount of memory will be left to applications (however, GEM still needs the 'Half Screen Buffer' which has to be in the normal RAM).

Summary: If you just need a higher resolution at 16 colours for word processing or drawing then a graphics extension like BlowUp or ScreenBlaster is a good choice. If you need higher resolutions at 256 colours I'd recommend an additional bus speed enhancer and more RAM (e.g. the FX card). If you want really good resolutions like 1024x768x256 (and even higher) at 75 Hz or 1024x768x16bit (65536 colours) or 800x600x24bit (16.7 million colours) then you need the Nova card (+ RAM, esp. in true colour modes).

1828. CBHD Problems

Newsgroup: comp.sys.atari.st
Date: 1996-04-27 00:00:00 UTC
From: dickie@mistral.co.uk
Message-ID: <830660286_OASIS_@mistral.co.uk>
Source record: 146113

I managed to install CBHD on my Falcon, and in all respects it seems much faster than AHDI which I had been using. Im finding one problem however which I cant understand, maybe someone can help. When I download zipped files, I get CRC check problems (using STZIP 2.6) when inflating the files, and trying to run the resulting files causes spectacular arrays of bombs. Re-installing AHDI or HDDriver and inflating the files from these drivers works just fine. Any ideas?

Richard

Wordflair supports GDOS - I think WordFlair 2 supported FSMGDOS, didn't it?

GDOS printer drivers should be available from any good PD library.

Were you using UNLZH.PRG to unarchive it? This will not support the current
versions of LHArc. You'll need LZHSHELL (aka LHA310.TOS I think).

Hi Blair!

Jim replied to you:

: My new TT (yes, a Don Thomas special) has a problem. When it's
cold : booted after being turned off for a while, it will not recognize
the : internal HD (a Seagate ST157N, 50 Meg). It boots to an ST low

Could be worth trying something like noroach, I had a lot of probs with my
hard drive not booting at switch on until I installed a boot sector onto a
floppy in drive A, this keeps polling the SCSI bus until the drive responds.
Apparently the SCSI standard is that the drive must be accessed twice before
it will boot, odd I know! (This on an STFM with Fujitsu 540M drive and LinkII

j> Recommendation: Get ICD Pro from TOAD, for about $50. I did, and
j> and have been pleasantly surprised by what it could do.
Might be worth trying HDDriver, the newer versions are very fast and a demo
is available!

Good luck.

Speak to 'ya later!

It may well have been the intention for such a product to exist for the Mega STe but it cann't have been successful, otherwise MarPet themselves would not now be saying that they would not be developing it.

For those with 450DM there seems to be an alternative, but this is really not economically viable ISTM. Not unless it included all the RAM anyway...

a> the manual.

In the Keyboard Shortcuts section it says that the Backspace key can be used
to move up one directory level unless you are already in the root directory.
Is that a typo or is it a bug in Mag!XDesk v3.01 ? It does nothing here,
although Ctrl-Backspace does. Similarly, Alt-Backspace doesn't work as
described in the manual (or at all).

Also, why does APPLICAT not support Window iconify? (45732 bytes 15-02-96
with Magic 4.02 (vom 13-01-96) and Mag!XDesk v3.01

: >> There is a folder /gemsys/gemdesk/rsc.
: >> Any rsc file placed in this folder is scanned for icons.
a>
a> The RSC file must contain icons, nothing more. You can take any icon
a> file from any other shell (newdesk (TOS), gemini or thing).

So, if I put DESKICON.RSC in this directory or any RSC files for use with any
other desktop, they will be made available for use with Mag!XDesk? Will they
support color icons or just mono?

If so, excellent.

I've never used any other replacement desktop apart from TOS (2.06 and
earlier). Apart from the precious memory it takes up I'm quite pleased. I
also fully realise that any other replacement desktop will take up much more
RAM... B^{<

I wish I could >quote some of the stupid statements made recently
on this subject. It seems obvious that us poor English only
speaking Users are second class citizens. Thing is not the
only program like that in respect to German speakers having
ready access to a publicly available piece of software.
Recently I had problems with ST-Guide 1.3, and asked
J.C. (no that is really Joe Conner, not the other J.C) where one
a version of 1.4E (thats ENGLISH, y'all) and was sent a short reply
with a long insert, that was J.C.'s support.txt statement.
In it was the clear inclusion of 1.4E as being in Hensa.
The ONLY program there is ST-Guide 1.4G. No English, not
even the old 1.3E that is on many other archives.
If we poor Americans or Canadians want a copy we have to go
to the bank, get a Bank Draft in Sterling, and wait weeks for the
mails to go back and forth across the Deep Blue.
Hell, when I got married, I didn't wait to try it until
after I had paid.
I personally applaud K.Ellis for her efforts. I tried it
and found that as far as I was concerned, ver. 0.59EEE was
indeed better. 0.59 would redraw the screens as they were
before a reboot, and with 1.0E you have to reclick all over again
to get the windows up. There is no way in 1.0 to change the format
of how you want the files displayed in text mode. There is a grayed
out change resolution in 1.0. Is that a teaser, available only for
registered versions??
Maybe the Europeans are getting even with us for the fact
that Atari WAS an American Co.??

Boris D. Cahan
bdc2@po.cwru.edu
P.S. I wouldn't have married ver. 1.0E. And I wouldn't have known
if I hadn't the chance to try it first.

I'm sure German only speaking German users feel the same way... And
once again I think there is a distinction to be drawn between not
being able to get something for test purposes and only being able to
get something for test purposes in a foreign language...

Personally I believe it is the author's loss not to have a translation
of Thing 1.0 available to non-registered users, this does not however
mean I agree with K.Ellis flouting his wishes.

> Recently I had problems with ST-Guide 1.3, and asked

> after I had paid.

It should be noted that in Hensa there is a note which say :-

"This version is in German only. An English version is to follow soon
when Joe Connor finishes the translations."

> I personally applaud K.Ellis for her efforts.

I'm sorry but I don't: firstly she translates a program and
distributes it without even attempting to contact the author when in
the documentation it clearly says that the archive may not be altered
and redistributed. Then when forbidden to distribute her translation
and asked to take it off her page by Joe Connor she blatantly ignores
this request...

> I tried it
> and found that as far as I was concerned, ver. 0.59EEE was
> indeed better. 0.59 would redraw the screens as they were

> before a reboot, and with 1.0E you have to reclick all over again

> of how you want the files displayed in text mode. There is a grayed
> out change resolution in 1.0. Is that a teaser, available only for
> registered versions??

Firstly K.Ellis did nothing more than a hack of the RSC file (as far as I can see), the actual program binary has not changed from the German version of Thing 1.00, also the documentation is not translated.

The change resolution wasn't greyed out in either my un-registered or registered version of Thing 1.0.

> Maybe the Europeans are getting even with us for the fact
> that Atari WAS an American Co.??

Maybe the Americans are getting paranoid because the majority of good software tends to originate from Germany?

No, okay that was silly, but so, IMO, was your comment, how does this situation only affect Americans? Surely non-German speaking Atari users all over the world are affected?

Regards

Cajun

1846. NVDI 3 and Falcon Truecolor?

Newsgroup: comp.sys.atari.st
Date: 1996-04-27 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <DqIL36.KxE@news.hawaii.edu>
Source record: 146131

Greetings,

I was wondering whether anyone hase successfully run NVDI 3 or
later in a VGA Truecolor mode on a Falcon. I am attempting 320x200
Truecolor. Why? Simply because I have a BlowUp FX installed, and the
acceleration will not work without NVDI, yet even with the accelerations
and FX drivers disabled, NVDI crashes in Truecolor graphics modes. Any
suggestions? The documentation for NVDI says it is compatible with all
Atari resolutions...
Aloha,

: : been sitting all night drawing and rendering scenes.
: The one time I tried to use it, it bombed out.. That was under GEM on
: TOS 4.04, I have yet to try it under Magic 4.. What kind of system are you
: using? If it's a falcon - what's the secret! :)

I have grabbed it and also found that it bombs my TOS4.04 Falcon quite a bit. Is it written in GFA Basic 3.5? I know that stuff compiled with GFA will upset Falcons due to some nonexistent 'features' of Falcon TOS that GFA basic will try to use (stuff that is able to be used on 68000 machines but not 68030).

I must say it looks VERY good however. I hope to be grabbing AutoCad files and converting them to POV-ray :-)

>If I add a graphic card like screen blaster or blow up, what are the good
>things about it.

Larger graphics modes :)

>I mean, can I get something like 800*600*true colors?

No. I guess you'll need to upgrade the Falcon for good TC resolutions. You'll
need something like BlowUp-FX or Nemesis...

>The monitor is supposed to display more than that.

You're 14" monitor WILL limit you, and you'll find that for practical reasons
you won't go above 800x600 as the text will be too small.

>Or is the screen is faster in the usual resolution?

Yes. :(
Expanding a 16colour resolution is good though. I run in 800x608 in 16cols
and it's still nice n'fast. (mono + 4cols are even faster! Mmm)
Expanding 256cols is a pain though.. :(

>Or do I get more memory available when I work under 640*480*256?

Dunno, work it out.. :)
I should imagine it's better to run in 16cols @ 800x608 (and faster) rather
than running in slowwww 256cols @ 640x480 IYSWIM?

>Please , answer me I don't understand...

Give Titan Designs a call about Nemesis !
Give System Solutions a call about BlowUp-FX !

I'm after Nemesis myslef, it's the same'ish price as a normal Screenblaster2
or BlowUp-Hard1 adaptor! :-)

a> but has since gone PD.

QuickST was shareware up to about v1.8, going commercial at v2 until v3.03.
The Codeheads picked it up and it became Warp 9 up to v3.8 (?)

Look for second hand sales - maybe someone here still has it. FWIW I've got
v3.03 here, but it's hardly worth the from here in the UK.

AFAIC it was the fastest screen accelerator around, even if it did take a few
liberties to achieve that speed. NVDI3 only made it onto my system because
of the vector fonts and (now) as a screen driver for my graphics card.

The PAK can only fit into a Mega STe case if the power supply is relocated
outside. Speak to Guillermo Campo at System Solutions in Windsor about it.

d>
d> Well, from what I've seen, in order to purchase an ST that would allow
d> me to move easily to a TT or Falcon later, the MegaSTE is recommended.

Sort of. The TT and Falcon are the only Atari models that use a 68030 CPU,
while the Mega STe retains the 68000, but the updated TOS, enhanced serial
ports and VME ports make it the nearest halfway house you're going to get.

d> I figure if I buy a graphics card or something for the VME slot, I can
d> make sure I get one that is TT compatible and use it later if I upgrade.

That's right. I'm not aware of any graphics card that'll not be
transferrable to a TT.
d> Anyway, I'm looking for a reasonably priced and clean MegaSTE in the
d> United States. It doesn't need a hard drive, but I'd like to have a
d> host adaptor (The MegaSTE doesn't have SCSI built in, right?) 1.44Mb

Correct.

d> Also, I already have a monitor -- a SC1224. Is this suitable to get
d> started with? I suspect I'll need a monochrome soon too, but this
d> isn't necessary right now.

That's fine for now. Any graphics card you get will require an (S)VGA though.

>connector was described down to the bones !

I think that the current computer market is on the brink of collapse. Many clone makers and Apple are posting sinking margins and losses. Only Intel and Microsoft are prospering, and those companies cannot survive without the support of the ailing clone makers. By draining margins from the clone makers, Intel and MS are draining money from the companies that keep them in business.

In the next five years, I look forward to a renaissance of computing - much of it from new, young, customer-oriented companies. Rather than concentration around a single OS (the mass-production theory), I am looking for a wide variety of OSes (lean production/customization). People will want their machines to be completely customizable, not generic. The new generation of CPUs from ARM and PowerPC/Motorola/IBM will help fuel these machines. Since, in many cases, the producer will be producing the OS, the computer maker will receive the margins rather than Microsoft - allowing it to market its products and grow at a more frenetic pace than the typical PC clone company, which is a high-flyer for three years, and then crashes and burns.

What we're witnessing now is the last gasps of the mass-production hierarchy in the computer business.

Source record: 146148

You might also want to try a program called ViewGIF 1.2 (I think that's the one).

It eventually became commercial... It'll let you save GIF files as PI1 (DEGAS) or
NEO (Neochrome) files. CrackArt 1.36 also is able to load 16 color GIF files and
it supports virtually all ST picture formats including PI1, PC1, NEO, ART, IFF, etc.

Here's MY Apple support story.

I recently installed my Quantum Maverick Hard Drive in my TT and I needed the wire that connects from the tiny connector on the drive to the LED on the front panel of the machine. The technical support person at a largish Toronto Apple outlet told me that although they probably had the wire in stock (all I really needed was the plug for the Quantum and two wires which I could easily connect to the wires in the TT) it probably wouldn't work on my machine AS IT WASN'T A MAC.

Wooee! Apple specific wire! The mind boggles.

1869. New FX software V1.9 available (with EMS)

Newsgroup: comp.sys.atari.st
Date: 1996-04-27 00:00:00 UTC
From: acher@informatik.tu-muenchen.de
Message-ID: <4ltvdo$4sp@sunsystem5.informatik.tu-muenchen.de>
Source record: 146154

Hi,
the new V1.9 for the FX-board is now available at ftp.leo.org in
/pub/comp/platforms/atari/Falcon/fx_1_90.lzh.
The FX can now access more than 14MB-RAM with the EMS-system, our PS/2 adaptor
board is also supported. Because the EMS is a very complex system (like virtual
RAM, but in hardware) there may be problems with some programms floating around.
Please report that to me.

BTW: Version 1.1 is also on the ftp-site, if you don't have it, please download
that, too.

Source record: 146205

<blakeney@inforamp.net> writes:

>Does anyone know if you can run older ST colour (ex games) software on a
>STacy portable?

The Stacy has a mono screen so some color games that don't run in mono
will not work. However, you can connect a color monitor to the Stacy
and doing so will bypass the Stacy's screen. I do it all the time when
I want to run color-only programs.

>Also, is there anything you should watch for buying one second hand?

Internal drives are usually the old Conner drives, likely 20-megs unless
they've been swapped. I'd recommend checking the machine out before
buying one. Like buying anything used, it's usually a gamble. I bought
one used a few years ago and have never had a problem with it. My wife
uses it regularly now.

anyone have any docs on installing softpc?

tae

You asked for it and here it is :). Raymond

This is one of the most solid programs I have ever run on my computer.
I limited SoftPC under Geneva to 2 megs. It is really a nice program
to run dos programs on your Atari.

DETAILED INTRUCTIONS ON HOW TO SET UP and USE SOFTPC FOR ATARI
Available on Power CD From Compo Software (TOAD COMPUTERS)

by Raymond Lohengrin

UNZIP FILE softPC and copy SoftPC folder to your C: Partition. Inside
the softPC folder you will find a zip file called C_DRIVE.ZIP. Unzip
this file and copy the file C_DRIVE.HDF to partition D: or just keep
it in the SoftPC folder. (this folder is a virtual IBM PC C: dive)

SoftPC looks at the file C_DIVE.HDF as a PC C: DRIVE. All files that
you copy from DOS to C: will be stored in the HDF file.

Loading SoftPC.

To load SoftPC run PCRUN.PRG. After about 5 to 15 seconds you will see a
Balck screen with GEM menues on top. This GEM menus are to configure
SoftPC and they are available at all times. If you have any problems
returning to DOS just select from the FILE menu RESET PC and then
abort. This trick can be used at any time to "WAKE UP" SoftPC.

The Gem menu PC drives is used to tell SoftPC where to find is
program folders and wich files will be used as "PC Drives" Remember
that your PC drive C: is not really your Atari C: Drive. When you use
DOS commands to format, write and copy to any DOS Drive (not A: or
B:) you are really refering to your .HDF files.

Select from the PC Drives menu E: HARD DISK to tell SoftPC where your
folder SOFTPC is. (C:\SOFTPC*.*) The path should be set up already.

To configure your PC drives go to the PC DRIVES menu and select C:
HARD DISK. Select your original C_DRIVE file and click OK
To created additional drives, select D: HARD DISK. Then, select
"CREARTE". You will need to write the information about the path of
the new HDF file you are creating and its size. Make sue not to
create an HDF file larger than the space available.

Example:
Create a new HDF file called MY-DATA.HDF with a size of 5 megabytes
long. on partition E: of your Atari Hard Drive.

Select D: HARD DISK from PC Drives menu and then select CREATE.
Type the following.
Disk Name E:\MY-DATA.HDF
Disk Size 05 Megabytes

Click OK.

The new file will be created on partition E: and then you will select
again D: HARD DISK but this time select FILE and locate the file
MY-DATA.HDF. The program will asked to be reset to activate the DRIVE
you have just created.

Now, load DOS from your floppy and at the DOS pront A:\ type "dir"
to list the available files.

Type C:\ and then "dir" to list files on C:\

To copy all file from a:\ to c:\ type a:\ retun and then copy *.* C:\ return.

To format your new created "D:" drive which is really your folder
MY-DATA.HDF"

Type fdisk to run the fdisk program.
After it loads select 5) to change current fixed disk drive.

Enter 2 at the:
"Enter fixed Disk drive Number (1-2).............2"
Use option 1 to create a DOS partition or Logical DOS Partition.
Select "y" for yes to use all the available space.
Press ESC to exit the fdisk program.

At the DOS pront type
format D:
the system will warn you that

"ALL DATA WILL BE ERASED"

Don't Panic this is just refering to your folder My-Data.hdf :-)

After your file is formated (drive D:) guive your new drive a label
like "PROGRAMS"

That is it, you have now a new drive D: available to SoftPC.

At the DOS pront type A:\ and return
Then type copy *.* D:\ to copy all information from a:\ to d:\

You can create as many D: partitions or HDF folders as you like, but
you will have to reset SoftPC for the DHF file to be available.

Enjoy softPC.

Raymond Lohengrin 4/4/96

Some useful DOS Commands:

"dir" List information on Drive
"copy (file name) C:\ Copy the file to C:\
"del" Delete
. Every thing
*.DOC all file ending with DOC
CD (directory or folder name) Chage to a directory Example CD DATA

Other Information.

To return to DOS use Control/Alternate/Delete.
Clr Home Key resets the GEM mouse and takes you back to activates the
GEM Menu.
If you are booting from C:\ make sure not to have a floppy on A:\
If you want to boot from A:\ use a floppy containing DOS.
A great program that makes life on SoftPC easier is Norton Comander.
This program uses "GEM Style" menus to perform file management
functions and also to view and edit files.

Use PCDFMT to format floppys.
to format C:\ to autoload DOS use command

Format C:/s

The Drive will be formated and DOS will be set to AUTOBOOT.

Classical guitarist Raymond Lohengrin

>In the other res I don't have maximum:
>768 x 608 2 colors 77 Hz
>768 x 608 4 colors 77 Hz

I too want something like BlowUp-FX or Nemesis, but I am quite disapointed
with these resolutions you say BlowUp-FX manages.

I run a standard 4mb Falcon (with the 32Mhz PowerUp) and use Videl Inside to
get higher resolutions. -I get 800x608 in 16 and 256colour modes. (s/w)

I was expecting the BlowUp-FX upgrade to give resolutions like 1024x768 in
16 and 256colours. :-(

However, True Colour is good! 600x400 in TC is very nice, but why is the
virtical res. so low? Shouldn't you be getting 640x480??

Same here, Paul. I use Selectric under MagiC4, but if I change resolution for
some reason MagiC seems to loose Selectric and use it's own file selector,
and this has the probs you (+me!) have! :-(

Guess we'll have to live with it! :-/ Anyone know why MagiC4 ignores
Selectric *after* a res change???

If you have only an Atari ST, prefer Laser C, because it's the faster (the faster I know) and he is easy to use. I think it don't run on a Falcon. It dislike to run with accessorys and Gdos, and it compile only in 68000. It do all in memory so to use it you must have 2Mo to run well.
I have a Laser C and Mark Williams, no problem with an ST I prefer the Laser C.
Excuse me for my English, I am French.

Nova Card??? Please tell me more! :-)

IF you've got your BlowUp-FX yet Leslie, how about some details on your
choices of resolutions in 16, 256 and TC modes in svga mode? :-)

I currently use Videl Inside (s/w) to get 800x608 in 16 and 256 colour modes,
but I would like to go to 1024x768 (at least). And would also love a decent
TC resolution on VGA!! -Ofcourse, I expect the BlowUp-FX to keep the screen
refresh rates high and the screen updates speedy!! :-)))))

Cheers,
Steve!

>Hi, I have a falcon and a SVGA 14" Acer 34T.
>If I add a graphic card like screen blaster or blow up, what are the good
>things about it.

firstly it is not a card (unless you go for BlowUP FX with the added CPU
accelreation <G> . They are adaptor like things that plug into the monitor
port.

good things .. read on.

>I mean, can I get something like 800*600*true colors?

afraid not there are other limits to screen like bus width, you can
of course use the blowup software to make a 800*600 virtual screen
in TC mode.

>Or is the screen is faster in the usual resolution?

no this is not a graphics card as I said but merely some software to
configure the falcons pixelclock and an external adaptor which allows
an extra pixelclock of upto 50khz. Using just the software you should
be able to get 800*608 or maybe slightly more depending on your monitor
in 16 col anyway. Using the hardware you can get considerable more , I
use 1280*1024*2 and 1024*768*16 on my falcon. 256 colour is like TC mode
quite tricky and will not really work that well above 800*600 due to
bus trouble esp if scsi comes into your system anywhere.

>Or do I get more memory available when I work under 640*480*256?

nope there is no videoram on these devices.

>Please , answer me I don't understand...
>Nobody is really clear about that..

How did I fare in this respect ?? <G>

Source record: 146213

thomas@mistral.co.uk (Thomas E Haines) wrote:

Myself and a friend have recently written a parallel port file
transfer program.
The program should work between all Ataris and PCs with a
bi-directional parallel port.

It has been tested:-
PC<->Falcon
STE<->Falcon
Falcon<->Falcon
PC<->PC

It is not as elagent as Ghostlink as it does not re-map the PCs drives
onto the Atari (we don't know how to do this:-), but it does have an
interface or command line version on the Atari end, the PC end just
has a command line version.
It is also faster (being parallel), and can be used between more
computers.

If some of you are interseted in this then perhaps I could tidy it up
and post it?

And if anyone has code to get virtual drives on the Atari desktop,
(or the PC for that matter) then we could hopefully churn out a good
version.

I would really like to test your software, and I could even help you to
build the virtual drives, what is the source ?

Really? I haven't managed to make my TOS 2.06 formatted disks work on a PC!
Instead I use 'Hcopy 1.7' which works perfectly (and much quicker than the
crappy desktop formatter).

flori@stingbox.sb.sub.de barked in U.COMP.SYS.ATARI.ST on 26 Apr 1996:

>> f> Sorry, but RTFM !
>>
>> Oh, very funny. I have HSmodem working, but the docs are less than
>> useless, thanks. I quote:
f> [...]
>> So telling someone "RTFM" is real helpful. You'll fit in just FINE in
>> the PC world.
f>
f> Thanks very much ...

My pleasure.

f> You should have quoted the rest of my posting too. I explained why I
f> wrote "RTFM". In one of the first english lines in - I think it was
f> SCC.TXT - is a sentence were Harun describes the capabilites of each
f> serial port in the TT (in English !). So I assumed, that you haven't
f> read it.

Here's the most important English portion of the SCC_X.TXT file:

(The most important parts translated from German to English on 1994-01-09
by Harun Scheutzow. I have no time for translating all.

I have read all of the English, and as much of the German as could
understand, of each of the Dok files that Harun has worked on. While the
prescence of English is appreciated, I reiterate that, becasue it is
incomplete, it is less than useless. Certainly, there's no English
information that states unequivocally that, in a Mega STe, one should
either use or not use MFP.PRG when using Serial 2 in Modem1 Emulation mode.
By experimenting - wasting about 15 hours of my personal time - I
determined that MFP.PRG is not required. Harun could have said so in 15
seconds.

So, if you are offended that I think that "RTFM" is a nasty remark - good.
It _is_ a nasty, unhelpful, typically-PC, elitist remark, and if that also
also offends you, consider how the person who NEEDS help feels when he
reads "RTFM."

I would be the first to admit that I have offended many. I don't believe
I've ever done so by implying that they were too stupid to read the README
file, however.

f>
f> Do you know what "they" told me at the Apple hotline: Sorry, we can't
f> tell you - you don't have (must not) to know this :-(((

Apple is the world's number 2 computer manufacturer - second at losing market share, primarily due to short-sighted marketing and support practices.

IBM is Number 1 in that field. Which, when you consider that they were the world's leading computer manufacturer at one time (a very LONG time), and they practically invented open architure desktop computers, is strange and sad.

Atari, OTOH, has never been the world's leader at anything since the VCS 2600, has been on a "cash & carry" basis since Jack Tramiel bought them, and has had some of the most innovative products - and certainly the most fiercely loyal users -of the entire industry. And the world's worst marketing.

Maybe you could try this in demon.ip.support or demon.ip.support.pc,
afaik Ka9q was oringinally designed for this use. It may be possible
to get Nos working "normally", assuming the relevent code has not been
dumped over the years.

Apple seem to have a reputation for this sort of behaviour. :-(

>I remeber my not too thick manual for my first Atari - every
>connector was described down to the bones !

I'd start asking in the apple groups to find out what sort of SCSI
device it is, and more importantly, if there are *any* third party
devices available to plug into it. You could then ask the third party
company for specs. There must be an apple owner out there somewhere
using a non apple disk (if it is SCSI or course).

>>knowledge. The gist is this.
>>
>>My ST has been lying unused for about 4 or 5 years now, it was my second ST
>>and is an early 1040 STE, with the dodgy TOS in it. Recently I acquired some
>>PC bits which I thought I would fit to it (memory chips hard drive et al.) Of
>>course not having opened the thing in years I didn't realise it's SIMMS were
>>not the same as the PC SIMMS and of course I'd forgotten it was a SCSI and not
>>an IDE controller.
>Ermmmm. AFAIK its ACSI not SCSI... so even then not comaptible !!!

ASCI was developed before SCSI was finialised. They are very similar
and an adaptor (typically The Link) makes it SCSI compatible. An IDE
interface can be obtained for the ST but is just not worth the
trouble.

>>
>>So my questions are things like:
>>
>>1. Could I use PC SIMMS in an ST?
>Not straight off unless they have the right number of Pins and are
>SIMMS, otherwise you'll need an adaptor, and I'm not sure one exists.

PC SIMMS are typically 9 pin, STE SIMMS 8 pin. iirc PC simms can be
used, the parity bit is just ignored. Probably needs an adaptor board
though.

>>2. Could I use an IDE drive in an ST?
>again I don't thinks so, the Falcon yes, ST no... get a SCSI drive
>instead.

I forget which, either the ST or STE did have an IDE interface board
designed. On one machine it's possible, on the other it is not. In
either case the board is nigh on impossible to find and you would be
much better off using SCSI.

>>3. Is there anyway to get a better TOS? (I can blow my own ROMS if need be.)
>yes buy a switchable 2.06 upgrade.... then you can switch to your old
>TOS if you like.... they are about 50UKP

Good solution unless you ever intend to purchase MagiC in which case
it replaces TOS which would render the switchable upgrade useless.

>>4. Where do I get those funny monitor plugs so I can hook up a VGA monitor to
>> the beast.
>I think for an ST you just use a modified VGA, don't know much about
>these except they work as Mono Monitors... I've seen some sold already
>converted.
>
>>5. What are Atari doing now anyway?
>Produceing games for their Jaguar Games console, and software for
>other platforms I think.
>>
>>I'm an averagely incompetent electronics engineer, with a leaning
>>towards MIDI and strange noises, who gave up his ST as it was too
>>stupid and he was fed up with floppy disks holding about a quarter of
>>a sample he wanted to keep.

If you can get the datasheets on the PC and ST SIMMS then you'll
probably be able to work out if the PC ones can be made to fit
(easily) or not.

>>My ultimate aim is to get the ST back in shape but this time with a
>>monitor, hard drive and more RAM, hooked up to my Yamaha (synthesizer
>>not motorbike :)) for the purpose of creating more wierd and
>>wonderful answer machine messages than ever before.

As most sound software tends toward accessing the ST at a low level,
you would be better using the switchable TOS upgrade.

>>My net access is restricted to e-mail and newsgroups, so please don't upset me
>>by pointing me at the WWW :)
>>
>>Failing this, the ST will be retired again and only brought out on special
>>occasions for quick games of Lemmings.
>>
>>Oh yes, one final thing, the ST comes/came with a VT-52 terminal emulator, is
>>there anyway of getting a VT-100 emulator, so I can dump my old HP terminal.

There is a VT100 emulator on ftp - I dunno where, probably hensa and
umich.

>TOS when you want !!!

But why install TOS 2.6 - just disable MagiC and use the old ROMS? The
prices are comparible, the machine does not have to be sent anywhere
to have it fitted, and the only time I ever have to disable MagiC is
after I have written something (to test it).

The only area I can think of where use of MagiC would not be a good
idea is if the system gets heavy use with non Gem programs, like midi
stuff.

>a version of 1.4E (thats ENGLISH, y'all) and was sent a short reply
>with a long insert, that was J.C.'s support.txt statement.

Joe Connor works his socks off translating all these German programs into English and writing good documentation. He does it for no monetary gain, and really should be applauded. He deals direct with the authors of the programs, which means that programs are officially supported, and no dodgy or out-of-date archives get distributed. No-else could be bothered to set up a registration scheme in the UK for 'Foreign' programs, so Joe took it on. His hard work is appreciated by many in Europe.

>In it was the clear inclusion of 1.4E as being in Hensa.
>The ONLY program there is ST-Guide 1.4G. No English, not

>If we poor Americans or Canadians want a copy we have to go
>to the bank, get a Bank Draft in Sterling, and wait weeks for the
>mails to go back and forth across the Deep Blue.

I bought tons of software from the states and Canada in 1990/91/92. It was a bit of a hassle and a wait, but well worth it! If you're that desperate to get a copy of ST Guide 1.4E, send me a disc and return postage, and I'll do it for you!

>Hell, when I got married, I didn't wait to try it until
>after I had paid.

Not a good comparison to make!

> I personally applaud K.Ellis for her efforts. I tried it

Unfortunately, I gather from my exchange of e-mails with Katherine, that she wasn't aware that Joe Connor was running an official support scheme for the program, thus duplicating the effort. It's great to see people like Katherine being prepared to do some graft, but personally I think it would have been better to contact the author direct to ascertain the position before embarking on the exercise. Even if it is difficult to contact the author, a message in this newsgroup usually brings the required response.

>and found that as far as I was concerned, ver. 0.59EEE was

>registered versions??
> Maybe the Europeans are getting even with us for the fact
>that Atari WAS an American Co.??

That's the biggest load of bollocks I have ever heard uttered in this
newsgroup. If you're being serious, then I suggest that you go elsewhere!
Us Brits could start saying stupid things about the Germans, but we don't,
mainly because the war has been over 50 years, and it's much better to
trade and exchange goods and programs rather than bullets and bombs!
Considering that Atari marketed its goods all over the world, the fact that
it was American-owned had little or no bearing on it at all.

Geez, I've heard some crap in my life, but you thinking that most Europeans
are anti-American really takes the biscuit.

Get a life Boris, it's too short as it is!

Katherine L Ellis (kellis@mtholyoke.edu) wrote:
: Ok, I understand, in short, I need a faster falcon or a real graphic card
: to run higher resolutions.

I'm using a ScreenBlaster Inside on my 18/36MHz Falcon, and I have a resolution of 832x608 at a refreshrate of 60Hz on my 14" SVGA, in both 16 and 256 colours. This does not use the ScreenBlaster's clock at all, since my system-clock is changed from 32 to 36MHz. When using the 50MHz ScreenBlaster-clock, I can have 1280x960 in 2 or 16 colours with a refresh-rate of 80Hz!

I'm planning to upgrade my speeder to 20/40MHz, which will allow a resolution of 640x480 in TC on a VGA.

The downside of this is that such resolutions slows down the Falcon :-(
I'd recommend the BlowUP FX-card, which speed up your Falcon *and* give you higher resolutions at the same time.

d> host adaptor (The MegaSTE doesn't have SCSI built in, right?) 1.44Mb
d> floppy is preferred.

Dan, the Atari host adapter that came with the MSTe is, frankly, trash.
Get a Link II or AdSCSI+ from Toad Computers, you'll be much happier.

d> Also, I already have a monitor -- a SC1224. Is this suitable to get
d> started with? I suspect I'll need a monochrome soon too, but this
d> isn't necessary right now.

That's fine for low and medium rez (320x200x16 or 640x200x4). The SM124
will give you 640x400x2 and is rock-solid and sharp.

d> Since I'm not an Atari user, any extras like programs, utilities,
d> manuals, etc. would be very helpful.

Spend a little time at some of the Atari ftp sites (Hallvard keeps posting
them here, I won't repeat) and you can collect more software than you have
storage in a very short time.

Hi out there!
As I happen 2 know, my Falcon (i.e. 68030) is able to support virtual memory (that is: It uses a part of the harddisk - say 16 mb - as swap space for the real memory - say 4 mb -. It looks now as if one has 16 mb memory. Pieces which are not in the computer, the computer loads in from harddisk.)
But I don't know where I can find a program which does the job for me!
Does anyone know if and where I can find such a program??
Thanx a lot!!
Jan Kamphuis(bikamph@cs.few.eur.nl)

From personal experience, I would stay away from Maxtor 7213S and 7345S
hard drives for your MSTE's internal. They do NOT work, some timing
problem or other. I did use one internally by putting a regular ICD ADScsi
board in the space where the video card was supposed to fit, using the
computers internal power supply to power both the HD and the ADScsi. I
still had to run a standard 19-pim DMA cable out through the little plate
that holds the Serial 2 connector and into the external DMA port. It
worked fine, but was a bit messy. The ICD board was not mounted , it just
rested on something inside the computer, with a piece of cardboard under
it to keep anything from shorting out.
Good luck. Now i have Quantum 730 meg Lightning installed and it works
fine, setup was easy, I used the ICD Pro utilities.

Tom,
Cubase lite is an exellent music program for the Atari ST. Mine was only $99
and runs on 1 meg of ram. It has score and can also print the score. You can
purchase it through Toad Computers. The number is: 1-800-448-8623.
Good luck!

>JP>> It is the Afterburner 68040 board from Titan Designs. I didn't want
>JP>D'you have any more info - prices, specs, etc? Perhaps this might be

According to the recent Titan Designs press release the prices are
as follows:

board with 68LC040 (ie without built in FPU) 449 pounds
board with 68RC040 (ie full spec) 539 pounds

The specs are as Frank says below but to add that the 040 runs at
64MHz internally with 32MHz buses.

>
>Don't know anything about prices outside of germany, but the specs are:
>68040 (with or without FPU), 2 PS/2 simm-slots for fastram up to 128megs, supports
NOVA-graphicscard, doesn't fit into original falcon-case, only little soldering (8 cables
or so).
>Anybody interested in benchmarks?

Yes please Frank.
You posted some benchmarks a month or so back, didn't you?
In those test you used the ST as the reference machine. Could you
redo the benchmarks with a Falcon030 as the reference machine?
Perhaps running at 640x480 in 16 colours (VGA) with the Nova graphics
disabled.

Thanks.

Rich.

>This whole CAB thing is a cruel joke really, isn't it? Probably some
>PC owner messing with our minds...

No, it's for real. Development of the STiK/CAB package is continuing, and the package continues to improve as more and more modules become available for it, and the already-available ones get updated and improved. If you can find an isp that will offer a plain SLIP account, you can use it on your atari, too. I am sorry to hear it has frustrated you. It did the same to me when it was early in the development stage, but now it is has become entirely useable and well-worth a try if you want to get your Atari online.

Oasis is another Atari package that is worth a try as well. The config is a little bit more difficult than STiK, but that comes with the added capabilities that Oasis/NOS offers. Those added capabilities are slip or ppp connectivity, popmail, smtp, nntp, ftp, telnet, and finger all in one package! Granted, it is a cli environment, but it works very well. Any time now there will be a version 2.? release offering much more streamlined functionality than previous versions.

All in all, don't sweat it, the atari internet scene is alive with activity, and this will only result in developments to make the internet more and more accessible to the ST/TT/STe/Falcon user. -glen-

Hi Ian,

IT>When will PC MagiC be available?
IT> Will there be an upgrade option from Atari MagiC?

You can ask Oliver_Buchmann@ka2.maus.de. He might know the answers to your questions. But I think it's some days or weeks too early to say something concrete. In a german ATARI-magazine ASH offers MagiC-PC for 299 DM which is the same price as for MagiC-Mac.

Wow, out of 21 TT's, I must have run across messages for half of them so far. That was a good deal wasn't it. I stuck my order onto the back of some Portfolio stuff. I figured the TT's were long gone based on the number they started with. Fortunately, I got one too though.

>(I.E. like a modem cable extention cable) and use that too hook it up
>to the TT's SCSI port?

Yes, I assume you either have a host adapter in your external drive, in which case you want to use the TT DMA port.
If you have a host adapter inside your MegaST, but the external case has a 50 pin centronics connector, then use the TT SCSI port (you'll need a 25 pin to 50 pin centronics cable).

You probably can use a 25 pin modem cable (but be sure all 25 lines are hooked up). I've never hooked anything up like that though. What could go wrong .. other than maybe blowing up your TT or your Syquest?

>And my TT is suppost to have 2 megs of ST ram and 4 megs of TT ram, is
>there any way to verify this and what's the best way to set program to

Unless you are booting up and pressing some key right away, the desktop should give you an ST and TT memory check. Depending on the values you get from that check, well those are the amounts of memory you have installed. The TT I got from the Warehouse sale had the TT ram board laying loose (you could hear it rattling around in the TT) apparently it came loose during shipment. All I had to do was plug it back into the connector. By the way, it was an "upgradeable to
16 Meg" type of TT ram board.

Your STe has 4,096 colors, but you can only get 16 'on screen' colors in low rez and 4 in med rez. The only way to get more is to get your self a graphics card such as Nova and Crazy Dots. You also need an adaptor to plug over the STe's CPU. Or you can get a more powerful computer such as TT's(and compatibles), Falcon's, and even emulators for PC's and Mac's.

Obession, I suppose, uses a palette switching trick to get more than 16 colors on screen. If you want to work with pictures with more than 16 colors, than look into Spectrum 512. If it's mainly for games than 16's the limit use the programmer is super clever.

IT's not a font realated problem (the only reason why that should come
into it) but I de-frag my disks every week or so, it's in the raw speed
in Gembench that is affected like screen re-draws etc. Anyway I got
out my masters and installed again on K:, it used the same font path
and worked great with a boot from K:, the SAME nvdi.prg in C: still
wouldn't fix it either :-(((

Actually, although I have a definite opinion (I'm not saying either way), and I do applaud Katherine Ellis for translating Thing 1.0, I had translated Thing 1.0 about 1 1/2 month after it came out (I think I had about 4 or 5 bits I hadn't finished), and ended up throwing it out, as I had gotten nasty mail about the fact that I had wasted 1/2 month on translating it without permission. No one complained that I had translated Duet or the demo version of Arabesque 2, or a multitude of other programs from both french and german (mostly german). Perhaps, if it's not a problem, authors/distributors could state that either a) he/she/they do/do not want their product translated or b) want anyone who translated the program to send it to the author/distributor for re-admission to the populace in general. I thought I was doing a good thing, but instead, for my troubles, I got a lot of gripes. It doesn't sound like the thing to do when it's the users who support the platform, and if I feel as though I'm not wanted, I could simply jump to a different system (not IBM, mind you - I'm not that foolish)

>and this has the probs you (+me!) have! :-(

The same thing happens with Alice, the new iconiser that comes with Wincom
1.6. It knocks selectric out and you are left with the MagiC file selector.
Now that is a _real_ pity because Alice is very good.

A fix soon hopefully.

1927. C-Lab Falcon/Logic Questions

Newsgroup: comp.sys.atari.st
Date: 1996-04-28 00:00:00 UTC
From: bjr@EbiCom.net
Message-ID: <4lvcau$e4q@Einstein.ebicom.net>
Source record: 146239

Aloha,
I'm considering buying the Logic Sequencer to run on my 1040 STe,
but also plan to upgrade to one of the MK Falcons in the next year or so.
Essentialy, I'd like to know if there is a Logic Audio for use
with the MK Falcon. I've noticed many Atari dealers package CueBase audio
on the MK Falcons and find this rather odd seeing that C-lab has its own
Logic sequencer. So...Is there a Logic Audio out there? If not...will
there be? Should I forgo Logic and opt for CueBase? From what I've seen
thus far...Logic is my definate sequencer of choice on the midi end...but
I'd like to be open for future hard disk multi track sessions.
Anyone out there using Logic on a Falcon? If so, do you do any
HD recording? How?
Please...any suggesstions...opinions...and advice are needed.
Ooops...almost forgot to mention...I already run Notator SL in combination
with the Unitor 2 and Export modules...one more reason I was leaning
towards Logic. I'd already have a multitude of midi ins and outs at my
disposal, as well as SMPTE control.
Perhaps I should just get logic, an ADAT and keep my STe???
I'm at a loss...mainly what I want to do is add the lowest cost 8 track
capabilities to my studio...considering the Falcon in hopes that it would
bypass the need for an expensive mixing console, and fill the 8 track
media requirements. I'd like to be able to mix down midi and 8 tracks of
audio at minimal cost, and thus far prices I've obtained on 8 bus mixing
consoles alone far surpass a full falcon set up.
Thanks,
Brian

From: Billy D'Augustine <azog@worldnet.att.net>
Message-ID: <31835A6A.5AA5@worldnet.att.net>
Source record: 146241

Well, basically the title says it all. Is it possible to plug my Falcon (3.5") hard drive into my PC's IDE port, and use the PC to copy the data onto a new hard drive?

I currently have a 340mb hard drive in my Falcon, and recently got a 1.2gb drive. I don't want to copy all the files onto diskettes. I figured I could plug the 340 into IDE 2 master and the 1.gb into IDE 2 slave on my PC, and just use an xcopy command or the like.

The thing that worries me is subtle differences in the filesystems.

Brian,

There is good news for you, as well as bad news.

Good news: Logic runs on any ST with at least 2M RAM, and is easily the best sequencer i've ever used. The learning curve for it is a bit steep sometimes, but it's not that hard to get going with it at first, then use all the really cool/nifty features as you need them. Emagic _does_ produce Logic Audio Falcon as well -- it runs on any Falcon with at least 4M RAM (though more memory is obviously better).

Bad news: Logic Audio Falcon is no longer supported by Emagic, (at least here in the USA). As far as I know LAF will not be maintained -- what is available now is pretty much it. Logic is currently at v2.01 for the Atari and, though v2.5 will be available soon, I hear it will be the last (ST and Falcon included).

This is the way I look at it: My ST has been great -- i've made a lot of really cool music with it. However, it's old, and slow, and technology marches on. The way I currently do my music is with Logic running on the ST for MIDI, synced to Deck II running on my PowerMac 6100 for digital audio. As soon as I get a bigger MIDI interface for the Mac I plan on upgrading to Logic Audio Macintosh. The music is really the important thing ...

1935. UK ATARI SHOWS 96

Newsgroup: comp.sys.atari.st
Date: 1996-04-28 00:00:00 UTC
From: fd18@dial.pipex.com
Message-ID: <4lvvqk$kuo@soap.news.pipex.net>
Source record: 146247

The UK Atari Shows for 1996 have now been confirmed.

Organised by Goodman International

SPONSORED BY ST FORMAT MAGAZINE

Sat September 28th ----- Motor Cycle Museum Birmingham

Sun September 29th ---- Osterley Four Pillars Hotel, London

Companies that have made a provisional booking are:

Goodman's, ST Format, System Solutions, Upgrade Shop, FaST Club, Best Electronics, Titan Designs, 16/32, Owl Associates, Calamus User Group, Merlin, Top Byte.

All the exhibitors I have spoken to so far intend to make these the best shows to date, with new product launches, demonstrations etc., but we do need your support. You've plenty of notice this time, and they are not as close to Christmas as last years.

Admissions prices have been set at 3UKP for adults, 1UKP for children

More detailed news will be posted over the coming months.

Regards to all.

Mike Goodman

I think NVDI v3.1 has problems with TC, you'll have to give System Sols a
call, as I'm sure they offer free-upgrades to v3.02 that is the same
version as yours(?) BUT without this bug.

btw, with BlowUp-FX, can't you get 640x480 in TC on a VGA monitor?

RE: Monitors

Hi! I am wondering about Monitors. I currently use the Atari SC1224 and Atari SM124 (with Monitor Master) and my Atari 1040STe system works great with both of them. I am wondering is it possible to get higher resolutions or more colors? If the STe is supposed to have 4,096 colors, why can I not see them all on the SC1224? I only get 16 in low res and 4 in med res unless I am running Obsession Pinball.

RE: Charles Johnson

Does Charles Johnson still support the Atari series of computers. I was thinking of registering his ArcShell 3.1 and wondering if he made any improvements to it by registering it. Thanks...

Hi there!

I have a 520STE with 2 Meg RAM. The monitor is a Commodore 1084.
I want to know if I can get some software to use the 1084's interlace modes.... I have seen it running on a falcon in 640x480xTruecolour - I don't care about the number of colours, I just want to be able to use the monitor in a res that is at least 640x400.

Is it possible?

Yes, you can do it with blow-up too, but do you really have 78 Hz?

> I was expecting the BlowUp-FX upgrade to give resolutions like 1024x768 in
> 16 and 256colours. :-(

Maybe BlowUp-FX can give a little more than blow-up (hard-II).

> However, True Colour is good! 600x400 in TC is very nice, but why is the
> virtical res. so low? Shouldn't you be getting 640x480??

It's tricky to configure so all resolutions works without changing channel on monitor.
I can use the same channel on ALL resolutions even without blow-up the borders are
the same. If I decrease the scan-freq I can have higher resolution.

Here you are wrong, ASH announced a software 68k emulator that runs
Tos 2.06 and MagiC under Windows 95 (and probably NT too) and emulates
the ST-Hardware to be available soon (second quarter) in Germany. It's
probably going to take some time for translation.
Prize is 290 DM (about $200), if you already have MagiC they might
charge you only for the emulator.

Don't do this, it will mess up your harddrive! Why not plug both your IDE-
-drives to your Falcon, with the old drive as slave? You'll need a driver
like HD-Driver, Hushi or similar though, as AHDI doesn't support multiple
IDE-drives.

1948. Advice needed for a CD-Rom driver

Newsgroup: comp.sys.atari.st
Date: 1996-04-29 00:00:00 UTC
From: acounis@lpnhp3.in2p3.fr
Message-ID: <4m1s6f$5gf@ccpnws.in2p3.fr>
Source record: 145983
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello folks,
Here is my setup: MegaST 4, PAK3 68020 33Mhz, ICD AdSCSI+, Apple CD300 CD-Rom

So, which driver is the most suited to my setup ? CD Tools or Extendos Pro ?

Thank you all

AFAIR, PC disks > 32 Mbyte have a different structure to Atari's, so you
cannot hook an Atari IDE into a PC & copy the files.

How about using Ghostlink to copy the files via the serial ports.

As you have a Falcon. you should be able to run at 115 Kbaud.
Might take a while (overnight) !

>Is there STOS support anywhere on the net (not www as I don't have this yet
>:(( ), usenet or cix conference maybe?

Yes, there is a STOS mailing list, which can be subscribed to by either mailing me, or sending a mail to stos-request@man.ac.uk with the word subscribe in the body.

Tony Greenwood (of STOSSER) is no longer on the net :/ but his pages (with LOTS) of info are still there, at http://www.airtime.co.uk/users/stosser/ (I know you haven't got WWW access, but when you do...)

Hope this is of some help...

> How much would cost a real graphic card like nova or whatever...
> Thanks..
> Bye..
>

Well I use Screenblaster with a 14" SVGA. Admittedly it's not running at as high a resolution as it could with a multiscan monitor, or as large as I could get from a graqhpics card, but i for one wouldn't boot my falcon for serious work without it.

If you look at the figures, you don't deem to be getting _that_ much extra space for your money, but it really does make a difference. A better monitor (multisync) would improve matters as well.

BTW I mainly use 16 colours, where the increase is dramatic enough to be worth the money. If you only use TC or 256, then a graphics card would disappoint you less ;)

Cheers,

Xav

Yes it will - its Fast-Ram that requires either NVDI or the little
auto folder program supplied by Blow-UP (called noblit.prg or something)

Just a tip to A. Kromke:

Why not look for the FILEID.DAT-file on the floppy, that way we can use the
long filenames used by the Mac on these disks.

>on the MK Falcons and find this rather odd seeing that C-lab has its own
>Logic sequencer. So...Is there a Logic Audio out there? If not...will

Yes. There is a Logic Audio Falcon module. It's not supported anymore -
in fact EMAGIC were never particular optimistic about the Falcon.

> Please...any suggesstions...opinions...and advice are needed.

Cubase Audio is probably a better bet on the Falcon, as Steinberg put
more of a development effort in on the Falcon side.

> Perhaps I should just get logic, an ADAT and keep my STe???

You could get Logic Atari 2.5 then (there won't be a 2.5 Audio version).

Recently there was a post about AHDI Version 6. I missed
an answer if any. Umich has ver 5, and an upgrade patch for
6.0->6.1. But Where is 6.0?

Boris D. Cahan
bdc2@po.cwru.edu

1965. Why AHDI 6?

Newsgroup: comp.sys.atari.st
Date: 1996-04-29 00:00:00 UTC
From: cj439@FreeNet.Carleton.CA
Message-ID: <4m2ku8$gjf@freenet-news.carleton.ca>
Source record: 146000

I'm using an old version of AHDI with my MegaFile 30. I wonder if there are any significant advantages to the newer AHDI, or some of the other boot programs available? I also have an ICD HD with ICD boot program. Can I use this with the MegaFile, and would it work as well/better than AHDI? The ICD drive is very fast, but that could be from the Quantum mechanism, or from a better booting software.(?)

After a long time in waiting, this game is now released to the general public.

I apologise for the delay it should have been back in Jan'96, but after my shops burglary and sorting insurance whilst trying to keep a business going things got a little hectic.

ANYWAY

ROAD RIOT 4WD is now released.
A nice racing game featuring 4 WD buggies, 11 tracks and 11 opponents, such as Aunt Artic and Cha Cha Macready you have the chance to become the new World Series (this is racing, honest!! ;-))Champion. Cost is £24 (UK pounds)

You can also get this game from

Systems For Tomorrow in the good old USA
Computer Direct in Canada
Frontier in France
WBW in Germany

More details available by email.

1969. NVDI 3.02 and Falcon Incompatabilities

Newsgroup: comp.sys.atari.st
Date: 1996-04-29 00:00:00 UTC
From: rojewski@primenet.com
Message-ID: <rojewski-2904961209490001@ip050.phx.primenet.com>
Source record: 146004

I have recently installed NVDI 3.02 and am having some compatability problems with several programs.

The "problem" is that programs are told the system is in Low-res when the truth is that it is in 640x480x256 VGA mode. (i.e. Diamond Edge says "Please switch to medium res")

The programs work fine in native TOS 4.04, and with Warp 9 (vers 3.18?).

What can I do to get NVDI to recognize that 640x480 is not Low-resolution????

1970. FS: vairious games

I've got a bunch of games that I'd like to pass on to someone who will
get some use out of them. I'm doing some spring cleaning, and haven't
played any of these in quite a while...

Feel free to email me if you want some more information about any of
these.

Price for each is best offer, plus shipping costs. I just sent a game
to someone in Georgia, and shipping was $3.53 Cdn ($1 for a padded
envelope, $2.something for postage) via regular mail.

Moebuis: The Orb of Celestial Harmony (Origin)
- Oriental-flavour fantasy role-playing game
- disks, box, manuals, cloth headband; complete, good condition

Storm Master (Silmarils)
- unique fantasy role-playing game
- disks, box, manual; complete, good condition
- runs in colour or monochrome

Uninvited (Mindscape)
- text/graphics horror adventure with a point-n-click interface
- disks, box, manual; complete, good condition

Paladin (Omnitrend)
- wargame, lets you design your own multiplayer scenarios
- disk, manual

Captain Blood (Mindscape)
- science-fiction role-playing game
- disks, manual

The Bard's Tale (Electronic Arts)
- fantasy role-playing game (a classic!)
- disks only

I had exactly the same problem with the same drive mechanism, but with a MEGA STE.
After searching all over the place for a little plug to go into the Quantum, I gave
up and soldered the wire from the LED directly to the drive's PCB :-)

Hmm - and the ascii one doesn't print then?

Are there any buffer options in the gemulator config? if so, bung 'em down
small.
Try closing every other win95 application when next printing.

I don't know much about win95 - does it have a print manager? If so - does
anything come up in it?

Or maybe you could get hold of a disc spooler for the tos side of things.
Gemspool would be ideal. Probably on HENSA.

Good luck, let us know how it goes.

Yours etc.

David.

Yup. And I've also made a web page with links to all of those sites along
with a file-search tool! Go to the Atari section of my web page and you'll
find that plus more. Oh, there are links to the FTP site list as well, but
if you want to go directly to the list:

ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt

The URL to my web page can be found below.

1980. Space Quest I problem

Newsgroup: comp.sys.atari.st
Date: 1996-04-29 00:00:00 UTC
From: Michael.Hill@den.mmc.com
Message-ID: <4m369q$i43@tel.den.mmc.com>
Source record: 146065

Well, I tried the official route, with about the expected lack of success.
I'm having a peculiar problem with Space Quest I. I contacted Sierra, and
a couple phone conversations later I got the final answer that they don't
have anybody in technical support who is familiar with the Atari ST platform
any more. Like I said, 'bout what I expected. :^(

Anyway, the game loads and plays fine, and I can save games w/no errors.
I can copy the save-game files to other disks, so the files aren't bad
in any discernable way. When I go to restore a game, though, it starts to
read the disk, then suddenly makes a loud, grinding noise (the first time,
I thought the drive was tearing itself apart!) several times, then I get
an error window that says "Read error: seek error".

Unfortunately, this renders the game unplayable. :^(Pleeeeeeeze, can
anybody help me fix this?! (Yes, I'm loading with the original disks.
DUH! But I play from a backup after the game has loaded.)

>>> 1. Could I use PC SIMMS in an ST?
>> Not straight off unless they have the right number of Pins and are
>> SIMMS, otherwise you'll need an adaptor, and I'm not sure one exists.
g>
g> PC SIMMS are typically 9 pin, STE SIMMS 8 pin. iirc PC simms can be
g> used, the parity bit is just ignored. Probably needs an adaptor board
g> though.

"PC SIMMs" don't exist, per se. There are 8-bit-wide and 9-bit-wide 30-pin SIMMS, and 32-bit and 36-bit 72-pin SIMMs. Any 30-pin SIMMs should work in an STe; jsut be sure to install two matched ones at the same time (i.e., 2 Matshushitas or 2 Panasonics with the same speed, andthing from 70 to 150 ns will be fine).

>>> 2. Could I use an IDE drive in an ST?
>> again I don't thinks so, the Falcon yes, ST no... get a SCSI drive
>> instead.
g>
g> I forget which, either the ST or STE did have an IDE interface board
g> designed. On one machine it's possible, on the other it is not. In
g> either case the board is nigh on impossible to find and you would be
g> much better off using SCSI.

Not only that, IDE is slower than SCSI (IBM's claims notwithstanding).

>for IBM by Satsuma and it also says the factory setting for SCSI id is 6.

The IBM drives, including the DSAS series, do not have a parity disable option, neither as jumper nor through software. Get a Quantum Trailblazer 850S and have parity check disabled through software _before_ you plug it into your MSTE, or get a Quantum Lightning 730S (or 540S) - this one has a Parity Option jumper.

Why try doing it on a PC, when you can connect two IDE-drives to your Falcon?
Connect them as Master and Slave and use SCSI-tools or HD-driver as your hard
disk driver and you'll be able to use them both at the same time. Won't work if
you still use AHDI though...

You need a HD where you can disable the parity, or it won't work.
Conner CFP1060S (1GB) works fine, as well as most old Quantum LPS drives. Don't
even think of the new Quantum drives - they need bus arbitration, which can't
be handled by the Mega STe's SCSI-interface.

bk> record it or a way to record at a MUCH higher volume.

Hi Keith,
Do you record a microphone directly into the Falcon's input?
Then it could be that your Falcon has had the linemodification made from the start and you don't have a real mic input anymore. The level will always be too low if that's the case and the only way to go is thru a mixer or mic preamp.
Otherwise, you have a recording level fader in the "Hardware setup" menu, as well as one in the control panel's audio setup. Check these out as they're rather important when recording thru the standard input.
If your recordings are slightly low, you can always use "Normalize" in the offline-menu, to maximise the level - but be aware! the noise level will also rise if you use this on low-level recordings.

Best regards,

Claes

Well, Freedom does survive a resolution change and according to the
"asterisk problem" this can be solved with UKEX (a keyboard mapping
utility). I have no problem with not being able to enter the asteriks in
Freedom, or any other program.

Hi friends: First thing, Logic Audio is not a module but a complete MIDI Sequencing , Automated Notation and Scoring and also Digital Audio System.

I requested the file to be posted as ZIP as if you download the PRG it will NOT work. Remember that it would not run unless you have the original hardware key that came with LOGIC.

LOgic Audio does not have Digital effects (on Atari Falcon) but it is really the best. It really is.

Raymond.

PS. (I also have Cubase)

Hello folks,

I have bought a used Atari for making MIDI and it had the game Zak
Mackrakken from Lucasfilm with it.
I have been playing it for quite a while, but now I seem to be stuck:

I successfully have 2 of the three chrystals I need for switching on the
"machine" but I need the 3rd one, I guess it must be white.

Does anybody have an experience on this?
Or can anybody tell me where to look for the solution?

Thanks a lot, greetings, Joachim

Yes, some programs behave like this, I don't know why, but the Freedom
"manual" says something about that it only happens to programs that's not
100% multitasking friendly or something, I dunno...

Devpac always "hide" its windows, Connect doesn't... 8-/

A-yup. Based on the symptoms, I'd say the buffer isn't getting flushed
at the end of the GEM print jobs. The solution may be as simple as
configuring the programs (or maybe a common printer driver, if that's
what your Gemulator setup is using) to send a formfeed after each job,
but I'm not sure if that will be possible. I don't know enough about
your setup or about the Gemulator/Windoze interface to know for sure
how to fix it. One hint might be to obtain a hex dump on the printer
if you can.

>and at last from the auto-folder, but with no luck.

That means it isn't finding the DEFAULT.CFG file where it expects it to
be. IINM, STiK itself requires this file to be in a subdirectory called
STIK_CFG in the root directory of the boot drive. Are you using a
STIK_DIR.DAT file?

[Hmm... on re-reading the readme file, I suppose I may not have made it
clear that the DEFAULT.CFG file is in fact required. I use the one out
of the STiK distribution; if you don't have one, you can probably get
by with creating one with the single line 'ALLOCMEM=50000'.]

2021. HDDRIVER & ICD HOST

Newsgroup: comp.sys.atari.st
Date: 1996-04-30 00:00:00 UTC
From: pbaker@mettav.demon.co.uk
Message-ID: <12396_pbaker@mettav.demon.co.uk>
Source record: 146020

Now I am using HD Driver with my ICD host adapter I would like to read the clock on board of the ICD Host and also write the current system time to it if I change the time.

I have an Forget me not clock but would rather use the built in clock on the host.

Has anybody written one or does anyone know of such a program(s) ?

Failing that does anyone know of a program that will set the Forget me not clock with the current system time instead of having to use the Gemmed program supplied.

2022. Problem with Magic 4 , HSMODEM and STE

Newsgroup: comp.sys.atari.st
Date: 1996-04-30 00:00:00 UTC
From: pbaker@mettav.demon.co.uk
Message-ID: <12397_pbaker@mettav.demon.co.uk>
Source record: 146021

Hmmm

I have a problem running Magic on a TOS 2.06 with 4 meg Ram 28 Mhz
Accelerator and an RSVE board.

I can't get HSMODEM to work , the fastest speed I can get the port to run at
is 19200, if I attempt to run at a higher port speed as soon as I access the
Modem Port the whole computer freezes.

When Drivin is run it says 'No Extra Gemdos ,installed'

Anyone any ideas?

Certainly true (so says a registered user of many of the programs that Joe
supports who would certainly nothave done so without him).

That said, the likes of Thing (which I don't use btw so I'm probably not
qualified to say this) seems to have been in beta of v1 for quite a while and
Danny's overwork at Hensa seems to have resulted in STG_14E not being
available yet (as others seem to be saying) which is certainly a probl

You should have gotten it by now, but if not, tell me and I'll e-mail ya
again. There isn't a readme, but to make a transparent gif, do this..

giftrans -t #RRGGBB -o outfile.gif infile.gif

where #RRGGBB is the hex color level of the color to be transparent.
Alternatively, you can just type in the color index # instead of #RRGGBB.

Makes a big difference on the Falcon though, if I use any other driver
excepting AHDI 6.01 I get problems with the SCSI port to the external
hard disk locking up. With AHDI no problems ever. I do own ICD and
HDDriver, but can't use them due to the above.

In theory this should be very simple, but I don't know if anybody has written such a program yet... I wrote a similar routine for a small demo way back in 1992 (It was approx. 50 bytes large.), but since it didn't tell VDI about it, it wasn't very useful outside the demo.

BDC2@PO.CWRU.EDU (BORIS D. CAHAN) schrieb am 24.04.96 um 3:10:

> All very interesting! What about with a TT?

Hi Boris ... I'm sorry, I thought the HSMODA-questions are all about
the MFP circuit.

So I had a look into the SCC-manual of the HSMODA-package. I ain't
got a TT so I don't really know what it's capable of ...

Reading a little deeper into the manual let me agree to what other
people had said before - I do not understand it either (Neither the
German nor the English version)
In fact, the part about the speeds above 19200 are absolutely
confusing.

Maybe there's somebody who knows how many clock inputs the serial
controller inside a TT has ... and maybe which frequencies are feeded
into the chip.

As far as I understand the manual there's one clock input called
PCLK. This one is connected to the system-clock (8 MHz).
I think, the SCC can't work the needed baud-rates out of this
frequency. So maybe that's why Harun is talking of an extra oszillator
with - I think - 14.xxxx MHz to get the exact frequencies for more
than (don't flame me to death if I'm wrong) 19200 (?)

As I said before - I don't know what Harun is talking about when he's
talking about the max. speed of the SCC, but with the information I
asked for, I _maybe_ can sort things out ...

Later - Florian

From: Simon@husbands.demon.co.uk
Message-ID: <830989684_OASIS_@husbands.demon.co.uk>
Source record: 146035

Can anyone help me print WWW pages with CAB? I'm having difficulties.

Firstly, when I go to print I get 3 options:
Printer #21
Metafile #31
Device #61

None of these work.....if I try to print, CAB bombs out (two bombs). Inside CAB, I'm just allowed to use the regular internal font ie. I don't seem to have a choice. Now, I do have SpeedoGDOS, but I have no idea how to set up different fonts. Am I right in thinking if I can do that, then maybe CAB will print?

Or is there a way to get Cab to just print using regular fonts?

I don't have a state of the art printer, just a Amstrad DMP 2160 (dot matrix).

Any ideas?

Thanks to all for any input!

Simon

MH> can anybody help me fix this?! (Yes, I'm loading with the original
MH> disks. DUH! But I play from a backup after the game has loaded.)

Sounds like the disk is worn out. That happens. Will the backup load and
run, or is the game copy-protected? If it's copy-protected, tell Sierra
you want to buy a replacement disk. If they say there are no such disks
avaialbe, point out that they never said anything in the warrantee about
reserving the right to refuse support for paying customers, and your state
attorney general (or the equivalent if you live out side the USA) may have
something to say about that.

This is a documented 'feature'. It happens to all applications that do not know about Freedom and expect the file selector to be a modal, non-window dialogue. If you move Freedom around the background windows have to be redrawn. Applications that aren't aware of Freedom cannot redraw their windows because they're waiting for the file selector AES call to return.

2044. Atari 1040STF or Atari1040STFM?????

Newsgroup: comp.sys.atari.st
Date: 1996-04-30 00:00:00 UTC
From: Chris Robin <nivek@pcez.com>
Message-ID: <3186C8B0.4427@pcez.com>
Source record: 146043

Could someone briefly tell me what the difference between the two model numbers are? I'm looking at buying one of the two, or both, and just want to know which one I should get. I wanted to get it mainly for a cheap sequencer for some of my midi equipment. Kind of a portable setup for gigs etc.

Also, if there is a quick way to tell how much RAM they have, let me know. The prices on these are like 20-40 bux each. (no big investment). Also will be getting the 1224SC(?) color monitor for 40 bux.

Thanx, all.
Please reply via private email, as I don't subscribe to this group yet.

I'm hardly going to defend the translation here, except to say that it's a
lot better than my German, but what is the problem here?

On a Mega STe or TT the modem 1 port is controlled by an MFP chip, requiring
MFP.PRG. The Serial 1 port (on the TT only) is also controlled by the MFP
chip and requires MFP_TT.PRG. The Modem 2 and Serial 2 ports on both
machines are controlled by an SCC chip requiring SCC.PRG.

You use the appropriate one according to what hole you plug the modem into.

I've just checked the docs and this information is pretty clearly stated in a
concise form in the opening of the english parts of 1_README.TXT, MFP_X.TXT
and SCC_X.TXT. I honestly don't see the problem, especially for experienced
users like yourselves - sorry.

Hi!

Offers Accepted... and reductions made on bulk offers!

* = awaiting buyer confirmation

Hardware:

127MB MiniS hard drive + ICD Link + ICD Utils + Case&PSU - offers
*Forget Me Clock II - offers
Supra 144LC Modem (14400) STILL WELL UNDER GUARENTEE - offers
*2 x 1meg simms - offers
Atari Mouse - (the one you get with the ST) - £5
Quick-Shot Joystick - (basic Joystick.. no autofire) - £5
Konix speedking joystick - (excellent handheld!) - £5
Broken Supra 144LC Modem (missing ROM) - £5
Ultimate Ripper - (cart based memory/screen/disk/music hacker) - £10

Software:

Lattice C 5.5 & Manuals - Offers

Music Software:

Steinburg Pro24 III - (industry standard MIDI software) - £10
Quartet - (excellent 4 track stave based music package that uses samples)

Books:

Program In GFA Basic (with example disk) - £5
Introducing Atari ST Machine code (with disk) - £5

Games:

Ishar 3 - The Ultimate RPG Game - £15
Epic - Excellent 3D Space Shoot 'em up/strategy - £10
Fire and Ice - Highly Acclaimed Platformer - £10
Chaos Engine - The famous puzzle 'em up! - £10
Populous/Sim City - Two Of The Best God Games - £10
Space Crusade - The Citadal Board Game Made Easy - £10
Hero Quest and Return Of The Witch Lord - RPG/puzzle - £10
Lemmings - Need I explain? ;) - £10
Gods - /THE/ Best platformer on the ST!!! - £10
Kick Off 2 - The original, addictive footie sim - £5
Microids Action Pack (includes Sliders) - £5
Trivial Persuits - £5
1st Division Manager - £5

Italy 1990 - £5
Crazy Cars - £5
Super Cars - £5

Magazines:

I am selling my copies of STF.... but I don't have the complete set. If you want to buy separatly I will see what I can do :)

All magazines come with their cover disks:

5, 8, 17, 24, 25, 27, 29-32, 34-56, 59-82

: Yes. There is a Logic Audio Falcon module. It's not supported anymore -
: in fact EMAGIC were never particular optimistic about the Falcon.

Logic Audio Falcon in its Last incarnation is available at ftp.mcc.ac.uk
in the /pub/music/emagic/ directory. You will have to peek a bit further
to find it as I cant remember the exact subdirectory after what I just
gave. I believe the file name is something like LAF295.PRG (not sure but
close).

DO NOT CALL EMAGIC for any support of this program as they won't answer you.

Have a look at the demo version of OUTSIDE
(ftp://acp5.chemie.uni-kl.de/pub/atari/). BTW, OUTSIDE is commercial software.
There is no non-commercial program that gives you virtual memory.

Probably not (for this configuration).

> or some of the other
> boot programs available? I also have an ICD HD with ICD boot program. Can
> I use this with the MegaFile, and would it work as well/better than AHDI?

Most non-Atari drivers are at least slightly faster than AHDI, and they
offer better configuration.

> The ICD drive is very fast, but that could be from the Quantum mechanism,
> or from a better booting software.(?)

A Quantum SCSI drive beats the socks off a Megafile 30, so it's mainly
the speed of the drive that you are seeing. The ICD driver, however,
is also a tad faster than AHDI.

2054. Hard Drives...

Newsgroup: comp.sys.atari.st
Date: 1996-04-30 00:00:00 UTC
From: richardw@dma.org
Message-ID: <4m439k$m80@sally.dma.org>
Source record: 146100

I have two 100 meg 3.5" Conner SCSI hard drives on my Atari STe system with the LINK 1 plug. When I had only one of them hooked up along with an external CD ROM (single speed) DRIVE it worked absolutely GREAT!

Now...when I tried to install the second one it would not even format it, so I backed up my first one and figured I should start from scratch. Now I can't get either one to work. I tried to shut off the 2nd one completely and even taking it out of the chain and no luck. I am running my FZT Term program off a floppy now and I would like to know what can I do about my hard drives. Please respond via e-mail, I would appreciate it! By the way, the first one is ID #4, 2nd one is ID #5 and the CD Rom Drive is ID #2 (if that really matters any).

Richard Wegner - richardw@dma.org

p.s. if I have to buy new hard drives that will be no problem actually but I prefer to use the ones I have instead.

>
>IT's not a font realated problem (the only reason why that should come

Here's another, even dafter possibility:

Have you got NVDI.PRG configured (with your desktop) to run in STRAM
on your TT? _if_ you're using a TT and _if_ you have NVDI configured
in this way it _might_ provide an explanation for the slowdown.

How's that for a long shot ;-)

Best wishes

Neil

2056. QST: magicfix updated??

Newsgroup: comp.sys.atari.st
Date: 1996-04-30 00:00:00 UTC
From: ppospis@mtroyal.ab.ca
Message-ID: <1996Apr30.070246.197@mtroyal.ab.ca>
Source record: 146102

A while ago I picked off the net a program called magicfix that altered MagiC 2.01 so that Devpac would work correctly. I can't remember the site I got it at, nor does the documentation give the author's location.

The docs are fairly strenuous in saying NOT to use this with any other version of MagiC. I have just upgraded to MagiC4 and would like to have Devpac run without extraneous steps at startup. Does anyone know if this program has been upgraded to work with MagiC4 and if so where it can be found?

The docs are signed Ofir Gal, if anyone knows the author.

Source record: 145905

Hi folks!

Even though I now have a IBM PC, I do miss some of the games on my old 1040ST machine. A few years ago, the disk drive broke, and I never got around to fix it.

Just the other day I thought about this again, and I would like to know what a new drive will cost. Is it better to go for an external drive (like the one on the 520ST) or replace the internal drive on the 1040? And what is a fair price for such a thing? I guess they are very hard to find new (do they even make those anymore?) but I could just as well take a used one.

I'm not interested in buying it right now (I'll have to wait until I get some more money) I just want to check the market... :-)

Please email me directly as I do not have time to browse this newsgroup for a while (I have exams coming up in a few days).

Thanks!

I highly recommend X-or, distributed by Mark of the Unicorn. This general purpose synth librarian/editor makes all your synths behave like one giant mega-synth. I use it with 4 modules, a couple of effect controllers & a master controller (Kat midi mallet controller). This system lets me work on 2 or 3 different projects at once with different patches in different synth banks on different channels & reconfigure the whole system with just a couple of key presses. I don't have a jv 80 but, there is a profile for it on the MOTU home page (It uses win doze Unisyn profiles so you won't be outmoded for a while). Sure it costs more to start with but after two or 3 dedicated module editors the software ends up much cheaper.

After some more experimentation I figured that out. :-(One strange thing I did notice, though, using the patched AHDI.PRG (SHDRIVER.SYS) under Magic 2.01 seems to allow me to access my DOS Zip disks without BIGDOS. I reread the Magic manual and saw no mention of this "feature" did I discover something new? I haven't tested it extensively yet but I was able to read files from an MSDOS formatted ZIP disk under Thing/Magic with just the AHDIBIGD.PRG as the boot driver.

2073. Any Logic/LOG3/FX users?

Newsgroup: comp.sys.atari.st
Date: 1996-05-01 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <Dqr3y2.JAw@news.hawaii.edu>
Source record: 145919
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings,

I have a Falcon030 in a Wizztronics Rack Case, with 14meg of ram, and a BlowUp FX expander installed. I recently got my Emagic Logic and LOG3 interface back, and to my dismay, when it is installed the computer will no longer boot. The following will happen if the LOG3 Cartridge is plugged in: First, the Atari logo appears, then

1. 4 Bombs
2. Message: CRC error in ROM E
3. System reboot (repeats)

I am wondering if anyone else out there is using a Falcon with FX and Logic. I am going to be tearing the FX out of my system shortly if I can't get Logic to work with it (after all, bought the Falcon for Logic Audio!) Any suggestions or recommendations would be very much appreciated.

Buy a new disk drive. US$39 or less at any reputable dealer for a
brand-new 1.44-capable drive (of course, you'll only get 720k on a
bog-standard ST, but so what?).

m> "TOAD IS GREAT" posts (and at one time I would have agreed).

While I agree that Sheldon (Computer Studio) is a strong supporter of both his customers in general and Atari customers in particular, I must take issue with your denigration of Toad. I had an email conversation with dave@toad.net not a week ago regarding RAM upgrades using SIMMs and he was very helpful, aas he has always been. I suggest, if you have found it to be otherwise, you should email him immediately with the details and see if he has anything to say on the subject.

Richard, I think you just need to look at termination. The last device in the SCSI chain should be terminated, and no others. That can be difficult with some CD drives, but there's usually a jumper or a SIPP-style resistor on
a hard drive. Since you are, I beleive, using Conner drives, you can go to www.conner.com and get all the specs on your drives to determine how to disable termination. Also be sure that parity is disabled, and make the CD the last device (physically - numbers don't matter) on the SCSI cable. Good
luck!

>appreciate it! By the way, the first one is ID #4, 2nd one is ID #5 and
>the CD Rom Drive is ID #2 (if that really matters any).

Seems that you didn't get the SCSI termination right. The first and last device on the chain have to be terminated, the others may not be terminated. For ICD Link owners, this means that the drive where the Link plugs in has to be terminated, and the one at the end of the daisy chain has to be terminated, too. The Link itself is not terminated.

A three-device setup should look like this:

Link-Drive(T)----Drive----Drive(T)

where (T) indicates present terminators.

bye, Peter

2083. Re: AHDI Ver. 6???

Newsgroup: comp.sys.atari.st
Date: 1996-05-01 00:00:00 UTC
From: Mike Allen <sma@sprynet.com>
Message-ID: <318839A7.4AAF@sprynet.com>
Source record: 145929

The last version of AHDI that Atari US released was 6.05c. It is part of the HDX 5.03c package.

Make sure you get the 'c' versions. HDX 5.03 and AHDI 6.05 had partitioning problems - if you filled a partition you could overwrite parts of the next partition.

2090. What's it worth? ST

Newsgroup: comp.sys.atari.st
Date: 1996-05-01 00:00:00 UTC
From: ironside@nbnet.nb.ca
Message-ID: <4m7oes$68e@darwin.nbnet.nb.ca>
Source record: 146050

I have a system which I would like to sell -- haven't used it for a couple years -- although my son still plays games on it.

Atari 520 STfm (TV compatible)
Upgraded to 2.5 megs RAM -- can be upgraded to 4 megs
30 Meg ext. Hard Drive in XT case (ICD and Adaptec Controllers)
720 K internal and 360 K external floppy drives
High res Mono monitor (SM 124)
Color Monitor (SC1224)
Assorted software
2 Joysticks
Original Manuals

Also a Spectre GCR cartridge/ROMs/Software
[this is a Mac Emulator] -- original manuals

All hardware is good working order

I would like an idea of what the above unit(s) are worth, so I can determine whether to put it in a yard sale locally, or go to the time and expense of shipping it long distance. I live in New Brunswick Canada -- so shipping may be prohibitively expensive.

Any help would be appreciated.

contact K Ironside <ironside@nbnet.nb.ca>

2091. AT-ONCE+ and Windows

Hi all.

As I haven't found one yet, I am presuming that there are no shareware jv-80 editors/librarians available for the Atari Ste.

Could anyone please tell me if there is a commercial package available? I think I saw one advertised once in a UK publication.

Thanks, John.

2095. Help: Redacteur & HP320

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: B.S.Senior@bradford.ac.uk
Message-ID: <4mabb7$fi7@columbia.acc.brad.ac.uk>
Source record: 145855

Has anyone, who uses Redacteur V3 and outputs on a HP320 printer, managed to use the printer's internal fonts directly from the program - rather than using the Graphics Printing program. ie. printing out in text mode.

The manual also implies that even when printing in text mode, graphic printing is possible, by 'being clever with the control codes'. Indeed this works on my Citizen 120D but I am having no luck with the HP320. (My main reason for wanting to do this is the better quality and increased speed when using internal fonts.)

Anyone who uses the above configuration please email me and tell me how you manage.

Is UIS still being developed? Just wondering as I bought it years ago,
and then had to drop it as it would not work on the Falcon.

Yep, I've had the modifications done by Atari UK years ago, and later
checked out by System Solutions. But I still can't get rid of the
problems, comes down to owning an early Falcon or so I am told.

From: Christoph.Wawrosch@univie.ac.at
Message-ID: <4m9kh6$m66@www.univie.ac.at>
Source record: 145859

Hi STers!

Could anybody tell me where I could find a sound editor & librarian for the Roland SC-55 Sound Canvas? When I browse through various informations in the web I understand that there should be several editors for the Atari ST, but I couldnï¿½t find any on the major Atari ftp sites.

Any hint would be highly appreciated!

chris

You can get the needed files by any of 3 methods from the umich archive.
You can send a mail message to atari@atari.archive.umich.edu with these
lines as the body of the text
send Archivers/zoo21.ttp
send Archivers/zooshl06.zoo
or you can use ftp to atari.archive.umich.edu or one of the mirror sites
closer to you! Then cd to Archivers directory and give the bin command
then get zoo21.ttp and zooshl06.zoo
or the really easy way is to use CAB with sdcabprg.prg installed as an
external viewer for zoo and ttp file types and get to umich over the WWWeb.
http://www.umich.edu/~archive/atari/ You can actually get in this way!
Not busy like FTP! Just click on the Archivers directroy then scroll down
to the bottom and you should see the zoo files there!

2102. Problems with Magic4 ...

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: fp5@brighton.ac.uk
Message-ID: <DqsBzr.FA9@bton.ac.uk>
Source record: 145862

Hi,

I've just began to use Magic4 (v4.02) on my Falcon, and i'm faced with
some problems. One of them is the * problem, but this one has already
been described and some solutions given...

My main problem is that once under Magic, the cookie jar seems to be
cleared, i don't know why. When i wanna run the MagicConf CPX, or the
TimeSlice CPX, they tell me "Magic not installed" when i run them under
Magic, and more surprising, i can run the MagicConf CPX under TOS
without any problem... What's more i can't configure HDdriver with its
CPX, i am also told that HDdriver is not installed, i don't understand as
it works fine under TOS.
The CPX view cookie shows me that the cookie jar is completely empty
but i know that some boot programs i use install a cookie (vi for instance)
So what's the problem with this Cookie Jar, am i the only one to have this
problem, or is it something i have to change in a config file... ?

I also want to change the name of the Printer and Trashcan icons, but i can't
figure where these names are stored. I would also like not to have the
printer icon on the screen, as i haven't any printer, can i delete it ?

Last problem, is that each time i wanna open the U drive, Magic tries to
access the Floppy disk (A:) for a while, and then gives me an error
(cannot access Drive A), is it a normal behaviour, or a bit to change in a
config file ?

Well, that will be all for the moment, if someone can give me some tips,
or explain me what's wrong with my problems, it would be great ...
Thanks.

2103. MIME help!

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: john.blackwell@aspects.com
Message-ID: <9605020712133933@aspects.com>
Source record: 145863
Body handling: 1 inline base64-encoded payload block was not displayed

Um, brain picking time again folks I'm afraid! :)

To cut a long story short, the only way I can get to receive certain documents is to get them e-mailed to me in MIME format, the problem being that I can't seem to persuade ESSCO to decode them without it crashing in one of 2 quite spectacular ways.

I suspect the problem lies somewhere in the "description" lines preceeding the actual content, and, if I may be so bold, I quote:

From: w3mail <w3mail@mogli.gmd.de>
To: john.blackwell@aspects.com
Date: Tue, 9 Apr 1996 07:45:54 +0200
Subject: 1/2 get ftp://ftp.swcp.com/pub/users/lazlo/lists/exotica/theremin/thrm
nsch.ps

[Inline base64-encoded payload not displayed]

etc etc ad nauseum.

Now I've tried snipping the beginning off, resulting in a particularly pretty crash, looking a bit like an extended beach towel accompanied by 2 bombs, and I've tried preceeding the whole shebang with a few well chosen words like "base 64" and "multipart", and so far succeeded only in crashing esscode with comments like "this operation will overwrite a file" reappearing endlessly till I reboot.

Can anyone help me out here?

Hoping

John

From: fp5@brighton.ac.uk
Message-ID: <DqsB03.EJy@bton.ac.uk>
Source record: 145864

Hi,

How can i convert a picture using Gemview so that i can use it as a
background picture (with the 16 first colors being the system colors,
and the rest of the palette being the picture colors) ?
I would like to convert a large amount of 256 colors GIF pictures, into
IMG format to use them as background tiles under Magic ...
I also want to convert them with 256 colors, because some of them are
saved with only 128 or 64 colors, and then Magic does not recognize
them as color pictures ...

Can anybody help, please ?

>Can anyone help me print WWW pages with CAB? I'm having difficulties.
>

Hi Simon,

Dead easy :-)

Make sure you have a disk cache set up

While online, make a note of the file numbers in the cache of the pages you
want to print - use source button

When off line, load a program called CONVERT, get it from 42BBS, and
convert all HTML pages that you want to print. This program turns them into
standard text files.

Then print them out

Simple as that :-)

Any probs, drop me an Email

Yours Roy

2109. CoSTa 1.40 Now Available!

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: Gary@the-gap.demon.co.uk
Message-ID: <16513120_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 145869
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version of CoSTa is now available! This is version 1.40.

It now supports and costs calls made by Atari NOS, MiNTnet, CoNnect, CixComm and ICE. STiK support is planned for the NEXT release.

There are various bug fixes and enhancements (also a new filter option for registered users).

As I'm not really sure where to upload it to (now that Danny is leaving Hensa) it's available on Cix and direct from me via e-mail.

If anyone can suggest any ftp sites to upload to (and how) then please let me know.

Regards, Gary.

>Bye, Rainer
>
>Big-DOS for big MS-DOS partitions
>http://www.uni-karlsruhe.de/~Rainer.Seitel/bigdos.html
I did read the english help file and saw the notice about not using the patched AHDI.PRG without BIGDOS. As far as Magic not reading greater than 32M it sure seemed happy to read my 100M MSDOS format ZIP disk the other night. Maybe it will have problems with files stored beyond the 32M point on the disk but I never ran in to any, picking files at random and there is over 50M of Atari files on this disk. I will do some more experimentation and let you all know. As far as BIGDOS though, if it won't work under Magic/Thing it doesn't help me much.
Thanks for the response, anyway.

Pete

2116. MagiCMac Audio

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: zan660@usa.pipeline.com
Message-ID: <4m956g$uu@news2.h1.usa.pipeline.com>
Source record: 145876

Is there any way to use a GEM appliction under MagiCMac which uses sounds?
I relize the Atari has a different sound system but I hate having 48khz 16
bit stereo sound and only being able to hear a keyboard click!
Zan

2117. MagiCMac and Movies!!!

Newsgroup: comp.sys.atari.st

I have the same problem. After a lot of testing, i found that's a bug
of Twoinone. When two in one call zoo.ttp it ALWAYS send backslash(\),
even if the zoo file has unix like directory(with /). I don't remember
if zoo only uses slash(/) in command line, but have tested with \ and
/ and get error with \. The tested file was a unix like archive(long
names, ...).

Thierry.

Perhaps Termpower was missing. Without Termpower, terminator down
electrical signals and then your scsi drive can't communicate with
your computer.

Thierry.

" Did You know that you can get Logic Audio 2.01 for free at: "
Not exactly free Raymond because you must have the original key . This
sort of defeats the purpose of the dowload doesn't it . Its to bad
because I wanted to see what Logic Audio looked like on my Falcon .
Any cheap copies out there for sale and I do mean cheap since it's not
supported no more .

First thing CAB doesn't do FTP or Gopher or E-Mail! So don't expect any
link that uses these to work! Second, when you upgraded, did you bother
to redo the paths to the cache!

On Fri, 26 Apr 1996, Magnus Thylander wrote:

ST Format stated in an article a while back that WD1772 chips with the
02-02 suffix can quite happily drive internal HD floppies.

>
>My TOS version is 3.05 (UK ROMs), and I can read, write and format DSHD
>discs using the built-in desktop formatter, as well as the numerous "High
>density aware" formatters available.

You can replace the internal floppy with a 1.44 drive with no problems
at all, the only change is to switch the DIP switch No 7 to on. On my
motherboard the DIP switches are at the front left ie under the hard drive
in a standard TT case. This works fine on my UK TT with the same ROMs that
you have.

>Would I gain anything from the AJAX controller? (More reliable? Faster?)

Don't know!!
>
>Or would I be advised to "sit on my hands" and do nothing?

Replace the internal, it makes life easier.
>
>Also, does anyone have a source of _internal_ high density floppy drives I
>can mount in my TT _without_ having to modify the TT case? Mine only had a
>DSDD 720k drive fitted :(

I got my drive from The Upgrade Shop (TUS) in Macclesfield for about
40 pounds. they advertised in Atari World. I upgraded when I mounted my TT
in a PC full tower, so I can't say whether the case would need any cutting.
You could try System Solutions, although they may be a little more
expensive!

Hope this helps.

>fonts.

Fine. SpeedoGDOS comes with a program called outline.prg. You can install and un-install fonts using it (note that you have to reboot to make the changes effective).

>I don't have a state of the art printer, just a Amstrad DMP 2160 (dot
>matrix).

Did you install a SpeedoGDOS printer driver for it? Check this with driver.prg which comes with SpeedoGDOS as well.

Then, take a vector graphics program like Kandinsky, draw some lines and circles, and try to print that. This will show you whether your printer works with your printer driver in general. If it works, then put some text onto the page using Speedo fonts. Try to print it, too. If that works CAB should be able to print. If it doesn't then try another printer driver.

I should have said: 'uttered in this newsgroup IMO.' :-)

>>If you're being serious, then I suggest that you go elsewhere!
>Steady on Mike, seemed to me like a poor attempt at a joke, no need to
>tear his head off.

If he was being serious, and having seen his other postings, I think he was being serious, offensive comments like this can so easily dissuade people from translating and/or supporting excellent programs emanating from Germany or elsewhere. It's a two-way street as well, programs like ExtenDOS are being bought in the UK, and NeoDesk is also popular. We all own Ataris, where the programs come from is irrelevant.

The only think I think we ought to be concerned with is people limiting distribution of Atari programs to one country or another as a matter of politics. With shareware or PD, this isn't really a political or commercial thing, more to do with the difficulty of moving small sums of money inexpensively around the world banking system.

Nonsense about Euros being upset that Atari is American, needs to be answered, even if it seems as though I'm biting this geezer's head off, which I don't think I did. If anyone, anywhere in the world, is having difficulty getting a PD or shareware program, I'd be more than happy to obtain it for them if I can, as long as my costs were covered.

Sorry if I have caused offence to anyone, that's not the intention, but as Boris caused offence to me and others, and knowing Joe Connor, I felt I had to comment.

Enough of this Euro-American antagonism, which only exists in the small minds of certain people, and let's get on with bashing the anti-Atari organisations - together!!!

ATB

2136. Octalyser where?

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: firefox@goal.apana.org.au
Message-ID: <835416771801@goal.apana.org.au>
Source record: 145930

Hi there

Im trying to track down a Atari STE program call Octalyser.
For those who don't know what this is,Octalyser is a program used for making,editing etc for music MODs.
Why am I after this one is that you can use 8 tracks which by the way is the only one for the Atari STE that can do 8 tracks.
I have Protacker,Noisetacker and soon Stormtracker but all of these only can do 4 tracks.
Now I have obtain the Demo version of Octalyser and have E-Mail and PHoned of of the contacts who were dealing with this program and I only got one reply from the US who only said that he no longer deals with it.
I can't understand why I cannot get a reg ver,I mean I do want to pay for it,but who the hell down I send my money too?
IF I send it to one of these contacts,Im pretty sure Im not going to get any thing.
I still want this program and I still want to remain Atari user but I can see why many of my mate are going to PC.
I do know and can get PC mod editors which are far better but I would like to remain Atari user,only it seem that Atari must trully be Dead.
Oh and yes I have written to ST format ask about this too,and yes I got no reply at all and these guys are Atari.....mmmmmm

Anyway can anyone help me? Anyone got a old copy they dont want?
PEASE HELP!!!!

Mike Murphy firefox@goal.apana.org.au - Please E-Mail me.

Ah the elusive zoo dearchiver that wasn't saved in a zoo archive!

I found one on the UMICH archive, http://www.umich.edu/~archive/atari.
The program you'll need is zoo.ttp. It's a command line program, so it
may give you a bit of problem if you aren't familiar how they work.
Run the .ttp and enter: -extract program-name.zoo. If you have a shell
like two in one, just install the .ttp's path etc.
I was amazed out how hard it was to find a version of zoo that wasn't
"zoo-ed". But once you get the basic zoo.ttp, you can upgrade to other
versions.
BTW you can also dl a couple of other zoo files there--the docs and the
various binaries that may or may not be of use to you.

2139. [FS] 8 MB St RAM for TT030

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: damms002@acpub.duke.edu
Message-ID: <4m96r6$7r2@news.duke.edu>
Source record: 145933

I have a 8 MB St RAM card for Atari TT for sale. It expands the builtin
2 MB ST RAM to a total of 10 MB.

Althought ST RAM is not as fast as TT RAM I always found it more universel
since every Programm can use it, whether it can utilize TT RAM or not.

Toad is asking 649 $.

I'm asking 350 $ + COD.

Does your Falcon have a clockpatch? If not you will get in trouble with fast SCSI drivers.
HDDRIVER is
about 1/3 faster than AHDI 6.061.
If you already have a clockpatch activate the option >SCSI Reset after Error< in HDDRUTIL.

I doubt that such a program exists. You should really connect a standard
DD (720K) drive to your Atari. If you do, you can exchange floppy disks
without any special software.

2146. Help with CDROM drive

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: Stephane Leibovitsch <leibovit@minos.inria.fr>
Message-ID: <31886501.167EB0E7@minos.inria.fr>
Source record: 145940

Hi everybody,

i have bought a Sanyo CRD-254S a few months ago but i am unable to make it work correctly. The only way is with Linux/68k, with which it works perfectly.

I have tried every known driver : CD-Tools, Metados, Extendos 2.3, cdrom.xfs but the best i can get is access to some directories and then a time out ! Moreover my SCSCI hard drive is sometimes blocked, as is my IDE hard drive.

I own a falcon 030 with 4 Mb RAM and TOS 4.02 and an internal IDE drive of 120 Mb and an external SCSI drive of 1Gb. The CDROM drive is a SCSI external drive.

Thanks for your help

Stephane Leibovitsch

2147. Substation Level Editor?

2154. Ajax floppy disc controller on a TT

Newsgroup: comp.sys.atari.st
Date: 1996-05-02 00:00:00 UTC
From: gmiller@inca.co.nz
Message-ID: <4maer1$7g1@inca01.inca.co.nz>
Source record: 145948
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

What are the advantages of installing the AJAX floppy controller in my TT?

My TT with a Western Digital 1772-02-02 controller has been happily talking to an external DSHD (1.4 meg High Density) floppy drive for the past 30-or-so months.

My TOS version is 3.05 (UK ROMs), and I can read, write and format DSHD discs using the built-in desktop formatter, as well as the numerous "High density aware" formatters available.

Obligatory <Shameless?> Plug: The "DESKFMT" replacement floppy disc formatter/copier I wrote for MultiTOS is one good example - it detects and allows high density discs to be (re)formatted and copied

Would I gain anything from the AJAX controller? (More reliable? Faster?)

Or would I be advised to "sit on my hands" and do nothing?

Also, does anyone have a source of _internal_ high density floppy drives I can mount in my TT _without_ having to modify the TT case? Mine only had a DSDD 720k drive fitted :(

The advice to get a DSDD drive is good, however, you are incorrect. DOS can read, write, and format 360k disks. What is needed to read ST disks is either a program on the ST to "fix" the boot sector, or a program I have seen (I got it through the US Army but have not needed it for several years) to read ST formatted disks on a clone.

If you want to do it "reversible" just cut of the two wires, take a
needle and "drill" it into the open end (between the "leads" of the
wire, in the middle of the insulation.)
Then you can "plug" the cable to pins of the HD.

Well since it works with Linux, i don't think it is a hardware problem.
The CDROM is the last in the chain, both physically and logically (SCSI id = 1).
I have tried the hard disk without the CDROM, the CDROM without the hard disk,
the CDROM before the hard disk and it doesn't change anything.

Its an Object Linking protocol. Its like the OLE protocol
from MS Windows.

>How you use it ?

Any software that supports it (eg. Kandinsky)

>Where can I get more informations ...

If you speak german, there is a text file and some Pure-C
libraries/example code on FTP sites. (sorry cannot remember
which one - could be ftp.uni-regensburg.de)

I guess the Kandinsky manual might give you some basic
info...

2170. Need CAB/STik help...

Newsgroup: comp.sys.atari.st
Date: 1996-05-03 00:00:00 UTC
From: bjr@EbiCom.net
Message-ID: <4mcjuu$hui@Einstein.ebicom.net>
Source record: 145758

Okay,
I've got:
1040 STe, 4Meg RAM, TOS 1.62, 80 meg HD on ICD ASCI+ controller, ZOOM 14,400 modem, both color and monchrome. Running Geneva Release 4, and Neodesk 4 Release 3...NVDI 3.02.
Problem, I can't get STik/CAB working...
I've the latest WWW package (I think) which is 1.30.
Here are my symptoms...

1. STik dialer doesn't seem to be working...sometimes if I dial in using Connect, then activate STik, and plug in the ip address in that blacked out unreadable STik paramater window, it will at least do something for a second before locking up.
The Dial in script is correct...as STik dials, gets the IP, displays $GET_IP with correct address, and says connected.

2. On sessions I actually get STik to connect...CAB flashes modem lights and says resolving host...nothing :(So I ESC and try a new URL which usually freezes the system.

3. Telnet, and AntMail don't work either...and I helped test AntMail with an eariler version of STik and all worked fine...now my earlier version of STik doesn't work either :(....

4. Also, earlier version of STik/CAB (1.20) would actualy work for an hour or so from time to time...but now it behaves the same as the newer version.

5. I contacted my provider...he hasn't changed anything with his Slip accounts, and hasn't recieved any other complaints about it.

6. I haven't changed anyting with my ST set up...and also tried STik CAB under straight TOS/GEM...where it runs even worse than under Geneva.

7. Here is my STik config and dialer scripts...

Default.Cfg

```
ALLOCMEM = 160000
SERIALPORT = Modem 1
CDVALID = FALSE
DIALFILE = DIAL.SCR
CLIENT_IP =
TTL = 64
PING_TTL = 255
MTU = 504
```

```
MSS = 1460
PKT_SIZE = 256
DFB_SIZE = 580
RCV_WND = 4032
UP_RESPONSE = 3
USERNAME = bjr
HOSTNAME = ebicom.net
FULLNAME = Brian J. Roland
NAMESERVER = 205.218.114.2
IRCNICK = {nonick}
IRCSERVER = IRC.io.org
IRCPORT = 6667
IRCPONGMSG = WWW installer!

Dial.Scr

BAUD_RATE = 19200
HANGUP = ATH
PREFIX = ATDT
INIT = ATZ
CONNECT_WAIT = 35
REDIAL_DELAY = 0
PHONE_NUMBER = 2437065
SUCCESS = CONNECT
FAILURE = BUSY
FAILURE = NO CARRIER
FAILURE = NO DIALTONE
FIND = EbiCom.net:
RESP = Sbjr
WAIT = 0
FIND = Password:
RESP = NoneOfYoBeezWax
WAIT = 0
FIND = to
RESP = $GET_IP
WAIT = 0
```

I'd really like to get CAB running...online...complete with Graphics (yes Jpegs too). in low ST res, but find that most of the config menus are way to wide to fit on the low res screen...bummer. Using the hot key function of Geneva, and some screen dumps to the printer (from ST High, so I'd know what hot keys to use) proved that CAB would work in ST low, at least for htmls on my hard drive. Might there be another RSC file for ST low res? HTML's I had laying around looked pretty darn good in ST low.

Ah, also, I did try running STik as a PRG, and an ACC...both yeilding the same results...nearly nil.

Thanks,
Brian

So does anyone know how to call Freedom in non-blocking mode? I know about the VA_START trick, and the menu bar trick (which makes it a beautiful system to use with Everest and/or Toswin when I need to copy/paste long filenames), but what I want to know is whether or no there is a way to just call it non-modally _without_ having to alter the config file.

Cheers,

Xav

Hi Daron (got it this time :)

We discussed AHDI drivers by e-mail. I have a Mighty Sonic installed
and these cards are famous for having problems on the SCSI bus.
What I came up with to elimate the problem wasn't cheap, but my
SCSI is 100%. First remove the much talked about CPU mod. While it
does tie the clocks together, and enables Cubase to run on most machines,
the clock signal is degraded somewhat. This is bad if your machine is
already prone to problems. Replace R216 with a 33 ohm resistor. R217
should have no resistor, just a bridge across the pads.
Next, the expensive part, is install a Power-Up2. I'm no electronics
expert, but the device does something to the configuration to improve
the set-up. By installing this, you will also remove R222.
Next you must install a 74F08 buffer right at the DMA clock in.
The F08 is wired the same as the CPU mod and there are plenty of
CMOS chips in the area to mount it on. You can find documentation
on how to perform this in Michael Ruges file called Chips172.zip on
most FTP sites.

Next use any AHDI V6.xx to V6.06. Stay away from the "faster" drivers as you will have problems with all. I have HD Driver and HUSHI. While they work fine on my REV K Falcon and TT, my REV G won't handle the XHDI compliant format. (I'm still not sure what they mean by faster. What test do they use to determine which is faster? AHDI 6.06, HD Driver, HUSHI and ICD Pro all rate the same under Rate Head, SCSI Tool and How Fast.)
You hardcore types can flame this all you want, but even running a 16mhz bus and 32mhz CPU, the Mighty Sonic is still as fast as an FX and the fast ram is real ($01000000) fast ram. All 32mb of it :). And the SCSI works perferct. And now thanks to Keith at Trace Technologies, MagiC runs in fast ram :).

Mike

Message-ID: <DqtIJA.L9J@ridgecrest.ca.us>
Source record: 145763
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I contacted Radiance Software in California (the old Lexicor)
and was told that Rosetta 3D was still available. They gave me
Lee Seilers e-mail address, but that bounced. It was funny as
the mail that came to me had his name as the sender, but for the
life of me I could not get it to reply to the address that it was
sent from??????
Does anyone have remarks about Rosetta? Is it worth tracking down?
How well does it convert DXF to 3D2 and can it convert 3D2 to DXF?

Thanks,

Mike

2178. AVAILABLE NOW - Enhanced Joystick Ports FAQ

Newsgroup: comp.sys.atari.st
Date: 1996-05-03 00:00:00 UTC
From: mbge4mdc@meehpa.ee.man.ac.uk
Message-ID: <4mclsn$3d9@yama.mcc.ac.uk>
Source record: 145766

At last, everything you never wanted to know about the enhanced joystick ports on the STe, Falcon and Jag. Includes code for reading rotary controllers, joypads, team taps and all manner of other weirdities.

Also includes plans for a Tempest 2000 compatible rotary controller!

Just go to my URL and follow the Atari link.

Please also spread it to other owners (esp. those not online) - there are some minor provisos to this, but they're just to stop other people using my research and not paying me royalties.

BTW it's not finished yet (too close to exams to continue for now), hence the 0.80 version number.

Cheers,

Xav

The Speed is usually excellent.
Try this: Print on a File on your HD (how long is it? how long does it take?).
Drag this file on your printer symbol. How long does it take?

<SNIP>

I couldn't test your quoted code ... but are you running the latest version of ESS CODE ?? I run v6.4 and have yet to find it fall over with MIME stuff. The other problem could be a dodgey source file anyway so regardless of the program you use to depack it, it will always fail - unless you have successfully decoded it on another platform ...

Your best bet is to use a real OS on your PC called Linux and then get hold of the program STonX. I've got a link to their pages from my Home Page and from the STonX page there is a link to a few other people (like the Unofficial STonX page which has a pre-compiled version of STonX).

If you are stuck with any Windoze derivatives :-(
... then you need a commercial board and software package, like GEMulator or the Janus baord. Both have a board to plug in to the PC and then a boot program to load GEM from the TOS ROMs.

2196. MagicMac & Pagestream. Help!!

Newsgroup: comp.sys.atari.st
Date: 1996-05-03 00:00:00 UTC
From: ercorp@aol.com
Message-ID: <4mdd6n$apn@newsbf02.news.aol.com>
Source record: 145784

I just purchased MagicMac for my PowerBook 280C. Loads up and works on the Mac, loaded Pagestream 2.2, loaded OK, but when I run Pagestream, the Pagestream Screen goes to a inverted monochrome type screen with very little color. Does Pagestream work in color mode. I am using the standard 256 color setting in MagicMac and have also tried the 16 color mode to with no luck. The Pagestream Screen is background white with black windows. The windows scroll bars are all black and I can not read dialog boxes that come up when for certain functions. Using Pagestream with it being so dark is impossible. Is anyone out there using Pagestream 2.2 with MagicMac and how did you get Pagestream to work in color or at least nomal monochrome mode where scroll bars are readable.

Help!!!

Tom

2203. UDO Release 5 v0.48 now available

Newsgroup: comp.sys.atari.st
Date: 1996-05-03 00:00:00 UTC
From: efac001@alpha.qmw.ac.uk
Message-ID: <4mdehq$aof@epsilon.qmw.ac.uk>
Source record: 145791

The author of UDO has now finished the English translation for UDO 5. It's now available via WWW on http://members.aol.com/UDOENG/index.htm (not .html) or via FTP: open an FTP connection to members.aol.com and cd to UDOENG/

Alternatively, you may get it from http://www2.wildnet.co.uk/~dbhabuta/support.html and select the UDO link.

Another place to get it is HENSA micros.hensa.ac.uk:/micros/atari/tos/q/q182/

And could anybody copy this message to comp.sys.atari.announce?

BTW: UDO is a software that converts its own format into ASCII, ST-Guide, Pure C Help, LaTeX, HTML, Texinfo, Windows Help, Turbo Vision Help, Manualpage and RTF. UDO is shareware and available for TOS, DOS, Linux (next week) and HP-UX (next week). Soon there will be versions for Indy, Sparc, Macintosh and Amiga. The English support is done by Denesh Bhabuta (dbhabuta@cix.compulink.co.uk)

Regards
Danny

Philip N Louie <plouie@isc.sjsu.edu> writes:

>I've heard nothing but trouble with Sanyo CD-ROM drives. I have yet to hear
>anyone getting it to work with any Atari. If possible, try to return it and

I have a Sanyo CD-ROM drive connected to my Falcon and it works. The
only glitch that I have encountered is that changing CDs isn't recognized
by hitting the ESC key - no recognition of media change. That is being
worked on by Roger Burrows of Anodyne, with a new version of ExtenDOS Pro.
Other than that, the Sanyo works just fine (at least the model that I have).

Source record: 145793

GUY wrote on 04.27.96:

> company for specs. There must be an apple owner out there somewhere
> using a non apple disk (if it is SCSI or course).

Yep, there are some around...

and two of them sent me a description.

Upon their pinout description I build a SCSI-Cable and - it worked !

The only thing was, that the MAC didn't recognize it. Norton
Utilities showed me, that there is a SCSI-drive present, but I
couldn't mount it and therefor I could not initialize it. :-(
I thought, I need a SCSI-driver, but today I got a utility program
for the Avid newscutter program. And this program recognized the
drive, let me initialize it and mount it.

So everything worked out fine ...

For all those people who helped me (with their comments/tables/ideas):
Thanks a lot !

: John.Breslin@ee.ed.ac.uk

I must say, I've had GREAT luck using the Gemulator board and software. It runs fast, and in many different PC resolutions. I mainly use Atari Works, Cricit (Point of Sale Cash Register program) and a few accessories and all work flawlessly, if not a little faster than on my STe.

I WOULd like to know how to get MIDI working on it with an internal sound card since I still have many MIDI programs such as Band In A Box left over from my Atari days. If anyone knows how to do this, I'd greatly appreciate the info.

I would also like to try STONX but I think it only works with TOS 2.06. I can't seem to get WINX to work on the Gemulator to make the TOS image and my STe has TOS 1.4. Oh well, I guess it's enough to be running 6 operation systems (Linux, Win95, Win3.1, Dos6.22, Atari and Mac) on my machine as it is.

Very strange. Which one of SCSI-drives is the last in the chain?
You know that you have to remove the "terminating resistors" on all the drives and
keep it on the last. The last drive is the drive which is physically last on the
cable and NOT the last id-number.
I use CD-tools and it works perfectly on my machine.

> I own a falcon 030 with 4 Mb RAM and TOS 4.02 and an internal IDE drive of 120 Mb

I have 030 with 16 Mb and TOS 4.04, 540 Mb IDE, 1 Gb SCSI, Syquest EZ-135 SCSI and
Toshiba SCSI CD-ROM.

Hope this helps

: Stephane Leibovitsch

I've heard nothing but trouble with Sanyo CD-ROM drives. I have yet to hear anyone getting it to work with any Atari. If possible, try to return it and get a better CD-ROM drive such as Toshiba or NEC. Avoid Panasonics too as I believe they use the same Sanyo drive.

2221. Re: Help! TT scrollbar

Newsgroup: comp.sys.atari.st
Date: 1996-05-03 00:00:00 UTC
From: tomjoad@sj-coop.net
Message-ID: <4mc3ro$nrt@owl.amscons.com>
Source record: 145900

The double click bug is common to TOS 1.6 and up. There are a lot of different fix-it programs available from different ftp sites, PD places, etc. It is non-fatal and more of an annoyance than anything else.
The bug is fixed under Geneva.

If you click on a scroll bar, sometimes the single click is interpreted as a double-click and your window scrolls up or down twice. If you want more assistance in finding a patch, ask, and I'll see what I can do.

Simon,

Booting with SpeedoGDOS and then selecting fonts from the options menu allows you to specify the fonts which will be subsituted for Sans Serif, Serif and Monospaced output and pretties-up CAB's face - albeit at the expense of speed!

This should enable printing using PRINTER #21 - which is what, I assume, you have already set up for the Amstrad using the Epson FX-80 driver, or similar (Is the Amstrad 9- or 24-pin - I can't remember?).

Note - you'll need at least 2Mb for SpeedoGDOS to function.

>> For anyone else reading this thread - CAB prints nicely for me using my DeskJet; and the text is great with my SLM804 _but_ I only get graphics on the DJ500, not on the SLM - any thoughts???? <<

>crashing in one of 2 quite spectacular ways.

>I suspect the problem lies somewhere in the "description" lines
>preceeding the actual content, and, if I may be so bold, I quote:

It seems that may Mime encoders (not ESSCode) don't put a proper
header on the files. I guess that many decoders don't need one.

Try putting something like the following at the top of the MIME
file :

Mime-Version: 1.0
Content-Type: filetype
Content-Transfer-Encoding: base64
Content-Disposition: inline; filename="filename.ext"

The top line (Mime-Version: 1.0) seems to be needed by ESSCode
Not to sure if the next to lines are needed but put them in anyway.
The content-type usually has something like Image/Jpeg or Zip in
there but I doubt ESSCode needs to know what type of file it is, Macs
probably like to know.
The last line is needed but ESSCode ignores the filename bit.
In ESSCode choose the Mime Decode option select the file to be
decoded the give the filename to be decoded to.
It will then decode.

To test pick a file and encode it.

Good luck.
If this doesn't work let me know.

Rich.

Message-ID: <RZGP4He.lmcclure@delphi.com>
Source record: 145666

```
STe with 4 megs memory, TOS 2.06.............$250
Same computer with only 2 megs...............$220
Upon request, will include older versions of UIS 3 (v3.30) and Warp 9
(v3.5) with the STe at no extra charge. (I found it cheaper to buy
used copies of the newer versions than to upgrade). Also will include
Publishing Partner (ancestor of Pagestream) upon request.
-
AdSpeed STe.................................$90
-
STe listed above and AdSpeed STe together.....$325
(NOTE: To prevent possible damage during shipment, the AdSpeed STe will
be shipped in a separate box) Upon request, I will include a 1" high
Conner 120meg hard drive mechanism of questionable function (it is
recognized as present by the ICD Pro boot software on my Falcon, but
freezes the boot process at that point, but ICD's format software
cannot seem to find it).
-
SM124 monochrome monitor (in original box)....$40
SM124 if purchased with STe: $30
-
Practical Solutions Monitor Master switch.....$20
If purchased with SM124 and/or STe............$15
===============
-
COD buyers pay actual shipping charges + COD fee in addition to the
above prices.
-
Anyone prepaying gets free shipping and a 10% discount off the above
prices.
-
Any other offers will be considered, and if anyone has an Amiga 1200 they
aren't making use of they would like to trade for the above, let's talk.

> least nomal monochrome mode where scroll bars are readable.

There was something on the Pagstream mailing list about something similar
IIRC. I think there was a file which stored the colour information and
needs deleting if you move machine. The file in question is PGS2.INF.

The only problem with this is that you then have to re-enter all your
defaults - printer/view... Apparently you may have to delete FONTLIST.V2
as well to correct font spacing.

Walter Hellman runs the Pagestream mailing list - hellman@teleport.com

I would suspect Speedo 4.1. If possible, upgrade to Speedo 5.0c. Or, NVDI works. I'm not running Neo/Geneva tho, so my advice might be worth what you paid for it! :)

By the way, stay away from any other 5.0x versions of Speedo - I had _serious_ problems with 5.0b in my system. 5.0c cleared everything up! And then, of course, I switched to NVDI... You know how that is.

CN> More precisely, I built fixes for a few problems with Geneva

Hey, a software author! Nice job on Papyrus!!! I've got v3.66 over here in USA. I searched long & hard for a good word processor - Papyrus combines the good printer output of AtariWorks with most of the features (and more user friendly than) Calligrapher. Thanks! Wish list: Copy/duplicate text blocks & graphic elements.

Arrrrrrrrgh!!!!!!
I am again going to have to take my Falcon off the market. Right
after I posted my messege, I have started having problems with my
modem port. In good conscience, I cannot sell the machine without
trying to resolve the problem. Or at least I think it is my modem
port (I have yet to try another modem).
Here are the symptoms of my problem.........
If I turn my modem on at my desktop I get a big, nice crash (lots of
bombs). If I turn my modem on first, then run a program (Uniterm,
STalker, or STik) which tries to dial I get a crash. If I reboot
my machine all works fine thereafter. Any of this sound
familiar to anyone? I suppose it could be my modem but I am unsure.
If I need to get my machine serviced, can anyone recommend a good
repair shop?

I'm not sure about Pagestream (iirc its mono) so try in monochrome
first.

This may be relevent if you fiddle with the palette settings, Gem (and
thus MagiC), treats colours as "the background" and "the foreground".
The foreground consists of all colours except the single background
colour. Foreground colours which cannot be displayed default to black.

>
>NOS seems to be bombing out each time to I try to post a news item.
>So this is a test.

*** WARNING - DO NOT QUOTE THIS IF YOU USE NOS ****

If you program C, the cause is a single erroneous statement in the Nos
news posting section along the lines of ...

fprintf(fp,p)

for which the cure is obvious.

For those who do not program C then it is enough to know that the '%'
sign triggers this behaviour, most typically any sequence consisting
of %s. The cure is to double up *all* % signs or to email the
posting to news. This is also the reason why encoded stuff gets
corrupted when posted by Nos users.

ie: to get '%s' to appear, I typed '%%s'.

The worst part of this bug is that you may quote something someone
else has said, not even noticing. This is the only way I have ever
found of getting Nos to bomb whilst connected.

*** END WARNING ***

Hmmmm.. I've got a problem. Can anyone help ?

Why, in my OASIS daily net, does it say there are 8 articles but when I open the window, there are only 7 ? I know the other one is there, I just received it. This happens in two or three newsgroups, but not others...?

Oh yeah, and why doesn't OASIS hang up my modem any more ? It always used to.

BTW, if you know the answer(s), it's probably safer to Email me rather than post it here 'cos it might end up being one of the articles I can't access !

Right, just got PITFALL for my Jag, so I'm off to play with that for a while, see ya.

The values Frank posted seem to be the same as the ones i got when i tested
Afterburner. Maybe this is an LC040 chip in it ??

I would expect an EC040 chip would give better cpu reeturn ??

Either that or Gembench could be giving incorrect data on this if it is
not 040 fpu emulation aware ??

either way i would think that 2000% is a tad optimistic , unless you are
looking for Afterburner060 :-)

Er, I'm using v6.061 (July 17, 1993). Are the UK versions different ? This
version supposedly corrects the partition bug. (But knowing Atari, probably
creates another one that I'm blissfully aware of 'til it wipes my internal
hard drive ;-)).

js> Can anyone help, I'm trying to find someone who stocks Atari's
js> new/second etc in the UK? I'm looking to replace my current Atari which
js> stops working when it becomes warm.

Best of luck - get a Falcon, by all means. However, in the meantime - flip your ST over, remove all the screws in the square holes (including the one under the "tampre-proof" sticker). Right-side up again, remove the top of the case, lift and unplug the keyboard and set it aside. Remove the metal sheild (you'll need needle-nose pliers and the same screwdriver). Now, push down on each of the socketed chips if the problem is "thermal creep," they'll make a "scrunch" noise as they reseat in their sockets. Put it back together, and see if that fixes it.

> Enough of this Euro-American antagonism, which only exists in the small
> minds of certain people, and let's get on with bashing the anti-Atari
> organisations - together!!!

Unfortunately, there are more than enough small minds in America to carry on with bashing anything, reason or no. I can say that, as an American. I'm not

proud of it, but it's true.

The fact remains that the majority of new software (and even hardware) for TOS systems comes from Europe, and has for many years. It's also true that the de facto international trade language ("lingua franca" is the accepted term, I believe, but that means French; go figure...) is English. While it's
perfectly understandable when people write software in their native language,
it's NOT reasonable to object to the attempts of others to translate it into
other languages. That smacks heavily of Jingoism - and it's no more welcome
in Italy or the UK than the USA, IMHO. In spite of fifty years of "enlightenment," Germany seems to have somewhat more tolerance for right-wing
Chauvinists than the rest of us (with, again, rather heavy concentrations of
such folx in places like Montana). I have a number of friends in Germany, and they're "just folx," but like anyplace else, there are a**holes in America, the UK. and Germany.

Bottom line: If an author says "don't translate my stuff," his wishes should
respected. His software should also be removed from public ftp sites, I think.

2258. Cubase 3.1 with v. 3.01 Roland U20 mixer maps

Newsgroup: comp.sys.atari.st
Date: 1996-05-05 00:00:00 UTC
From: douwe@bart.noord.nl
Message-ID: <4mgo8d$1ie@lava.ivg.com>
Source record: 145693

Hi everyone,

I've recently downloaded a version of Cubase 3.1 for the Atari ST to replace my Cubase 3.01 version. All is working fine, except for some functions in my Roland U20 mixer maps. Especially the system exclusive messages don't work at all, even though they do work fine in the 3.01 version. I've tried to get things straight using the 'learn' option, but that made no difference.

For example, to change the voice reserve on Part 1 (MIDI ch 1) the Hexadecimal command is, and should be:
F0 41 10 2B 12 10 05 01 XX 6A F7
which translated in Decimal/readable:
SysEx, Roland, 16, 43, 18, 16, 5, 1, Variable, 106, EOX (Std. Roland Chksum.)
where XX/Variable is the (hex) number of voices.

It just doesn't work, whatever I try. Anyone who knows the answer to this?

Douwe van der Zwaag

>So does anyone know how to call Freedom in non-blocking mode?

That's described in the documentation (.\source\fdmproto.h). I don't know whether there's an English version of that file. I may try to translate it but be warned: I'm not a programmer (although I know some basics of C andPascal programming).

>whether or no there is a way to just call it non-modally _without_
>having to alter the config file.

There is, but programs have to support it directly (through a modfied fsel_exinput()-call).

My ISP gives me 2 DNS numbers, a 'FROM' and a 'TO' (Dynamic
SLIP). It's the 'TO' number that I have to pick up when I log on. Learned that
the hard way. Also I found that when upgrading CAB 1.2 to 1.2b, I had to
re-run the INSTALL program, couldn't just replace the old file and go.

Hope this helps; Rich Mier

On Behalf of Tony Greenwood...

For sale:

2.5 Meg STe TOS 1.62
85 Meg SCSI Hard drive in 5.5 inch case with power supply, all
leads and adaptors ready to go. Jam packed with software.
Cumana 720 k 3.5 inch external floppy disk drive.
Atari SC1224 Colour monitor (no left and right borders, otherwise
working perfectly).
Trackmaster monitor stand.
Forget me Clock, clock cartridge with thru-port.
Videomaster cartridge.
Stereo Master sampling cartridge.
Eprom cartridge card.
Mouse, joystick.
Loads of Atari Magazines (STF, AW and STR) (no cover disks)
Manuals, various leads (including Scart), and various disks.

A complete set-up, fully working and ready to go.

£250 the lot (strictly no offers)

Cannot split.

Buyer collects (Accrington, Lancashire, UK)

For more info Tel (01254) 391469

Don't reply here or by Email, because Tony won't see it.

2269. Lattice C 5/HiSoft Basic 2.10 under Geneva - how?

Newsgroup: comp.sys.atari.st
Date: 1996-05-05 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GEFQDFUQUp@tos.ak.planet.gen.nz>
Source record: 145704
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have Geneva release 004 (I believe this to be the most recent version?)

I want to run Lattice C 5.6 under Geneva. It seems to work OK exept for compiling from the integrated editor/compiler environment.

When I press Alt-M to make the project, I get the messages window where I see the normal messages of the compiler. However, as soon as the compilation begins, other currently running tasks immediately start to crash and cause bus errors and address errors. Other tasks crash one after another until there are none left, just LC5 and GENEVA.

This problem also affects HiSoft Basic 2.10.

Any suggestions about how to rectify this problem are appreciated.

dldalton@xmission.com wrote:
: I'm really, really stuck. I've got a bunch of work (midi music) on
: the ST. I need to have it scored. I don't have scoring software for
: the ST.

: Why won't my stuff on the ST, which is in .sng format, read on my PC?
: I'm using Midisoft's Studio, which has .sng format. There's some
: strange header on the ST files. How do I get rid of it? Is there
: some utility for converting ST .sng to PC .sng?

: Please. Help. I'll be rich and famous as soon as I can convert.
: Bless you, my sons (and daughters).

The .sng format is not a universal one. Many MIDI programs use this extension, but I know of none that are compatible with each other. While I am not familiar with your software, I imagine it will save files in MIDI standard format with the extension .MID. This format is (basically) standard among all platforms, so you should save your work as a standard MIDI file and then import it into your PC. Hope this helps...

Bradley Maurer (gregor@shelly.goldengate.net) wrote:
: Which dearchiver do I use to decompress .Z files? and for that matter
: what exactly are .Z's--7 bit ASCII files?

They are compressed files using the Unix Compress command. To uncompress
them, either do it in Unix (uncompress filename) or get the
Compress/Uncompress ports for the ST available, I believe, on Umich in the
Archivers directory.

: Thanks in advance!

There are several host adapters available! I personally have a large external case with my drive mechanisms, power supply and host adapter inside! This was made with the Atari systems in mind, as it has cut outs for the acsi ports already in place. If you have such a case, then I would recommend the ICD adscsi+ host adapter and utilities. Same thing goes if you have bare mechanisms, as you will need some sort of drive case any how and might as well get one designed for your machine! They can be ordered from Toad Computers, phone no. 1-800-448-8623
If these are Mac type external drives then you are probably better off with the Link II host adapter from ICD, that just plugs onto the end of your cable between your ST and the first hard drive, it also come with the utilities needed to use it. Only different requirement from the AdSCSI+ is that your drive must supply term power to the Link II, niether one will work with a hard drive that need bus arbitration, but both can handle drives with parity enabled.
There are European host adapters available from Toad also, but I have no experience with them, so I can't advise you about them. other than to say that I assume they work. 8-)

Re: my problem printing with CAB.....

Thanks for the suggestions. I seem to have a further problem, the deeper I get into it!

SpeedoGDOS seems to boot OK, but when I run both the OUTLINE.PRG and DRIVERS.PRG to set the fonts and printer up respectively, the hard drive whirrs (?) and then opens a window (called Outline Fonts for OUTLINE.PRG and Printer Drivers for DRIVERS.PRG). At this point the computer locks up with the window unfilled, just grey background......

I have 2.5 Meg of internal RAM, but can't seem to get any further. Any ideas?

>ftp-archives or similar...

This is to be expected: at the moment CAB does not support ftp, gopher,
mail to etc. protocols. I'm afraid the best you can do is check the source
code for the ftp address and use mgftp to fetch the files in a seperate
session.

>Second: I tried upgrading from v1.1a(included in WWW130.LZH) to 1.2b but now I
>cannot connect to any Internet-site... No matter what URL I try to connect to
>I get the "Read error...." error message... Local files work okay... I've
>tried clearing the cache but no good...?

This may be because the cab.ovl file is not included in the archive you
downloaded, even though you will find something called cab_jpeg.ovl. This
is a seperate file needed to decode jpeg pictures on web pages. Copy the
cab.ovl from www130.lzh or download the latest version as a seperate
archive from Alexander's website and elsewhere.

You asked for an e-mail reply, but I'm posting this up as well for general
information.

Hope this helps

Andrew

If you follow the links to the english pages (denoted by a flag AFAIR) all
will be explained....in english:-) You'll find the latest version of CAB
there ready to download - remember to add the cab.ovl file to the cab
folder in this archive or it won't work online.

I'm sure there are other sources you could try - Flinny's page is always
worth a try, but Alexander's always has the latest release there first -
cos he wrote it!!

2292. Re: 32 MHz '030 for FX?

Newsgroup: comp.sys.atari.st
Date: 1996-05-05 00:00:00 UTC
From: Xiting Phillips <xiting@worldnet.att.net>
Message-ID: <4mj0kp$8ek@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 145827

I got my FX to work at 36/36 and briefly at 40/40, but it seems I have an overheating problem because the system will crash after a period of time. Do you even have an auxiliary fan? My CPU gets really hot, but the DSP seems fine and I have a 33 MHz FPU, so it runs pretty cool. That's why I figured maybe the faster chip could keep the heat to a minimum. Maybe just touching up the solder joints on the CPU would help, too. I had a CaTTamaran at work that really acted up until I upgraded the FPU to 40 MHz and touched up the contacts on the CPU.

graham@grasper.demon.co.uk (Graham Irvine) said:-

>I would expect an EC040 chip would give better cpu return ??

Yes but the AB040, EC or LC, should give a much higher value for CPU
than the 300percent shown. Ignoring FastRAM the 040 should be around
6 times the power of the 16MHz 030

>Either that or Gembench could be giving incorrect data on this if it is
>not 040 fpu emulation aware ??

I am not sure about FPU emulation. If it is an LC040 then GemBench
would surely act as the Falcon would normally do without an FPU being
fitted. An EC040 would seem to GemBench to have an 68882 fitted.

>either way i would think that 2000percent is a tad optimistic , unless you are
>looking for Afterburner060 :-)

OK, perhaps just a little bit :-)
The 060 should be twice as powerful again!
And before you all mail me I haven't heard of an AB060.

Rich.

>names, ...).

About TowInOne, but not for same reason(cause?):

Without Multitos, TwoInOne give a local and useful terminal for text
ouptut(.tos programs). With Multitos, toswin is used. But, without any
reason, under multitos, there are long waiting in some cases,
specially after viewing a file in archive. This is very irritating...

Just remember that zip and Lzh packers have their dedicated shell
using gem with internal viewer, working perfectly under multitos.
TwoInOne is only usefull with zoo and arj.

Hi there fellow Motorolas,

Anyone one know Mike Watson of Sinister Developments Email address ?
If he's got one, that is.

I registered MegaDepack back in February and have not had a reply :(

PS. Any hardened games players out there wanna give me some tips on how to
get past level four on Llamazap ? The Atomic level usually relieves me of
most of my lives and weaponry so I haven't got a chance on the Insects level.

PPS Has anyone seen an Eagle yet ? What it an awesome experience ? :)

Source record: 145833

In Msg A12241@B, Paul Muehlbauer (Paul.Muehlbauer@flight.org) wrote:

>Wish list: Copy/duplicate text blocks

Well, papyrus has got the usual Cut/Copy/Paste menu entries. Just mark a text block, copy it (Control-C), and paste it wherever you want (Control-V). The other way is to mark a text block and then dragging it with the mouse to its destination while holding the Shift key (if you don't hold the Shift key the block will be moved not copied).

>& graphic elements.

Before moving them press the Shift key and keep holding it down. You will get a copy of the element then.

Hi all,

I have a friend in the US and he has a problem with CAB/STiK.
What he needs is the default.cfg and dial.scr files for STiK
that work with a provider called Mindvox/Phantom Access.

If anyone has these could you please e-mail them to me minus
passwords of course!

Thanks to anyone who can help

Graham

I tried a disk cache program here this week - the archive name is TC_TST64.ZIP. It totally trashed my C: drive after about 30 hours of running. I restored from tape - but if the cache program had let me disable write caching, I would not have had to do that. This looks like it could be a VERY good program; it sped up access to my CD-ROMs by a factor of about 6. I would encourage the author to add a checkbox to totally disable write-cache, since that's not an option I would ever trust (I even disable it on my wife's WindBlows machine with a /X switch in the command line for SmartDrv).

Bottom line: if you decide to try this program, watch your computer very cloesly - and do a COMPLETE backup first.

From: Karim El Founas <elfounas@student.fsa.ac.be>
Message-ID: <318DC3B5.41C67EA6@student.fsa.ac.be>
Source record: 145607

Hello,

I've tried to use Le Redacteur 4 on my Falcon and it
work a little bit in the ST mono resolution. But there are many
graphical errors in other resolutions. Le redacteur have a lot of
compatibility problems. Example, it bypass the GEM to write itself
in the menu !!!

Le Redacteur doesn't use SpeedoGDOS but it's own bitmap
based font system. Good for an MegaST with a matrix printer but
not for my Falcon with a Stylus Color.

There more adapted programs like Script, Papyrus, Atari Works, ...

Your going to have to do a little more explaining before anyone can help
you! I have a 4meg STe TOS 2.6 AdSpeedSTe/16Mhz 3 Hard drive w/ICD 6.5.5.
I have speedoGDOS5c In one of my Deskmanager setups for printing from
CAB! Works flawlessly, ACC's included!
Now we have to figure out what in your setup is conflicting with
it, or if you have it setup right in the first place? Did it work before
and now won't, or is this your first attemp to get it up and running? As
I said, need more info before we can be very helpful!

AFAIK *.Z is the extension for 'compress',
*.z is the extension for 'pack' (another UNIX-archiver).
You need an unpack for ST or you must do that on UNIX...

Finally it's here!

People have been asking for the winning contribution in the
demo competition at the Agressive II party in Helsinki
this new year. I admit, we have not been working our butts
off until now to actually finish it. But after a long
weekend with very little sleep we finally put it together.

Demolition is an Atari Falcon RGB demo made by
Dead Hackers SOciety and IMPonance.

Some specifications:

Video: RGB and TV
Music: D2D 32KHz
Lenght: About 3 minutes
Size: Approx 6 MB
Code size: (including tables) 68030: 12000 lines
56001: 5000 lines

The demo is available from the DHS WWW-page: http://www.kuai.se/~ae/
At the time of writing it's not directly available thrugh the
"Demo" sub-menu but instead via Scene->Agressive II->Files.
It should also be available via FTP from ftp.cnam.fr.
You can also talk to us on efnet IRC #atari.
Here are the IRC nicks for some of us:

*.z was also used in early versions of GZip, but it was later changed
to *.gz to avoid confusion with pack. Anyway, GZip can read all of
them, be it compress or pack output.

Source record: 145616

Hello,
I think that "le redacteur" v1.0 run only in st mid and st high
compatible resolutions. "le redacteur" till v3.0 works in mono modes,
and TT-falcon vga 16 colors mode. It can use dictionnary in french,
english, german italian spanish. It has the best grammatical correction
in the world of word processors included, at least for french. I can't
tell you for english.
Why not contacting the french editor? (can't remember the adress. If you
want me to ask send an e-mail).
Bye!

2331. EB_MODEL exporting POV-Ray format - How??

Newsgroup: comp.sys.atari.st
Date: 1996-05-06 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GEGVFDUQUp@tos.ak.planet.gen.nz>
Source record: 145630

I have recently obtained EB_MODEL from an FTP site. My version is dated
Dec 14/12/1995 version 2.52a.

First, I would like to know if a later version is available. I would also like to
know the author's email address.

In any case, the real problem is that I cannot get EB_MODEL to export in POV
format. I spent hours creating a scene to try out, and then when I chose export,
I got options for "TXT", "ASM and "GEM". None of these produced POV-Ray
compatible output. Looking at the animation section, I happened to notice an
"Export POV" option, but this did not seem to actually export anything.

I thought that EB_MODEL could export in POV-Ray format, since it has many
options relating to POV-Ray.

Unfortunately, I cannot read French, which puts me at a disadvantage. I did
manage to get the old EB_ED_POV working some time ago, but it was too buggy.
It looks like EB_MODEL is much moe usable, but it is useless to me unless
it exports POV-Ray format.

Any suggestions, even if you think they won't help much, are much appreciated!

*Please*reply*via*email*, since my usenet is going wrong at the moment and I
don't seem to get articles from this newsgroup.

Hi all.

I was wondering if anyone had an Atari Transputer Workstation for sale (ATW / ABAQ/ ATW 800 (?)). If so how much do you want for it, including ship. Although of course a UK based owner would be great.

I look forward to hearing from anyone who has information about this machine.

Thanks all

Yours,
Dave.

Apart from the fact that this message appears eleven (11) times, at least
in my news reader, shouldn't it be a 720k, rather than 880k, floppy. :-)

Yes, it's possible alright. Email me and ask for it and, I'll reply
with it included.

It's called doublehight or something alike.

You then get 640*400 with 2bit colour.

For the SCSI drives, you need and adaptor, such as the ICD Link, or ADSCSI
adaptor board. You also need and enclosure, and power supply for the
mechanism. You can't easily use an IDE with an ST.

Hmm - try playing with your TCP config in Default.cfg then.

Maybe a bigger packet size will help.

I know CAB kept runtiming on me until I changed some numbers.

Try these:

```
TTL = 64
PING_TTL = 255
MTU = 1006

2349. Cheap UK ISP - atari friendly

Newsgroup: comp.sys.atari.st
Date: 1996-05-06 00:00:00 UTC
From: dhend@zetnet.co.uk
Message-ID: <831503134_OASIS_@zetnet.co.uk>
Source record: 145648

Hi folks,

Sorry if this sounds like a blatent advert, but this could be useful to anyone wanting to change or connect 1st time.

Zetnet are offering a full SLIP connection for under £8- a month (£25 setup) with full local access to anywhere in the UK via an 0345 number.

They offer dynamic IP allocation, nntp news, pop3 mail and 500k free WWW space for a homepage.

Although primarily aimed at PC users, they would be happy to see more Atari users, and have asked me to look after anyone interested, during the setup procedure.

They are easily accessed via STiK or the forthcoming OASIS2/ICE package, and for anyone wanting to use NOS or OASIS1, this is easily possible with a combination involving NOSSHELL.

Anyone who would like to know anymore can either contact Zetnet themselves (for more exact pricing) on 01595 696667 (shetland), or e-mail myself on dhend@zetnet.co.uk.

Thanks for my indulgence, hope it's of some interest.

Yours etc.

David.

No, it's made for 8MHz use (DD drives) and isn't rated at 16MHz at all, but
I've heard from others that it's actually rated at 10MHz but will sometimes
work at 16MHz for shorter periods of time, unofficially that is...

Thanks to all who answered my plea for help

with a few tips I managed to trace the problem to an old version of DRIVIN.

Working at 57600 now...

Now EXTENDOS , how do I get it working with Magic?

It doesn't seem to want to run under Magic...

Nope! MagiCMac is really* just a GEM-compatable operating system, and not a full hardware level emulator. If you have a PowerMac, you could try the port of Linux that supposedly exists now. Otherwise you can get A/UX, which is commercial mind you...

Files with a lowercase "z" or "gz" extention are compressed with "gzip". Look
for gzip124.zoo in the Umich archivers dir. Type "gzip -d foobar.z" to
decompress a file. Note: gzip was written to replace the old "compress/
uncompress" programs, so it also handles "Z" files, so you can (and should)
trash the old compress/decompress programs.

I think the .z extension was the old extension for gzip-packed files
(it's now .gz). So; on a unix, try "gunzip file.snd.z" or
"gzip -d file.snd.z". You can find gzip for Atari too, propably at umich.

Fgj>
Fgj> Thanks to anyone who can help

If you'll get him to capture a login with a plain-text terminal such as
FZDS or Flash (but attempting to login to his IP account) and send the
captured text to me via email, I can take care of the dial.scr file.
However, it is absolutely IMPERATIVE to ensure he ahs an UNcompressed SLIP
account. Nothing else will work; not PPP, and not CSLIP.

One problem with that, Tom - the genius who archived it used zoo. Now, I don't know how you feel about it, but I think using the same archiver that the shell is intended to simplify is totally pointless. If everyone who needed a zooshell knew how to use zoo without the shell, most would probably choose to do without - especially as zoo is memory-hungry.

>
> It'll take an hour or so, but works!

Not for everyone, Karl. I am unable to get Ghostlink to work without dropped bits - or added bits, perhaps; all the characters are "scrambled" on the PC end, regardless of speed (I've dropped all the way down to 4800; any slower would be silly, since I can use the phone lines and get 28800).

> P.S. Install folderxxx.prg otherwise strange things happen!

This is true only for people who aren't using ICD's hard disk software.

None of the WD chips is rated for 16 MHz - they're all specified for 8 MHz +-
1% (!). The -02-02 revision is the most likely to do the 16 MHz job, but most
of them aren't reliable when working on floppies for a long time in a row.

You have to set up a suitable color scheme in Pagestream. There is an entry "colors" (or similar, my program here is German) in the "Settings" menu. This might become some sort of "coal miners in a dark tunnel" mouse clicking work, though.

bye, Peter

>into other languages. That smacks heavily of Jingoism - and it's no more

I personally don't think it wrong to translate stuff assuming that the
author okays it. I suppose it all hinges on what we define as Public
Domain. If I was a software author, I'd want as many people to use and
hopefully register or at least respond to the program, as possible. Some of
the more enlightened authors now include help files etc in German, English
and French, plus some of less-spoken European languages. If the author has
appointed someone already to do the translation, then I think that should
be respected.

>welcome in Italy or the UK than the USA, IMHO. In spite of fifty years of

I've tried using Redacteur using Blowup (software version). Couldn't get it to work. Only format it seemed to work in was in ST hi-res mono emulation mode. On the ST fitted with Overscan it worked fine in the higher resolution. Maybe you'll need a hardware adapter to get it working in colour mode. Let me know if you manage it.

A fact for which we Northern Americans, I haven't forgotten the Canadians :), should be grateful. If the Europeans hadn't clung on to the 16-bit computers and got on the NES bandwagon, there would have been very little interest in the ST.

> it's
> perfectly understandable when people write software in their native
> language,
> it's NOT reasonable to object to the attempts of others to translate it
> into

> welcome
> in Italy or the UK than the USA, IMHO.

If you want your software to sell or be used(PD) in other countries, then you better have some type of translation. This gives European programmers a big advantage over American programers who don't even know any other language but their own. Besides, how do we know that some Italian is not translating Thing for his native language. At least Sinister Developments have multi-lingual registrations screens, you just pick the language.

> Bottom line: If an author says "don't translate my stuff," his wishes
> should
> respected. His software should also be removed from public ftp sites, I
> think.

If I put my stuff out, I would welcome anyone who translates the instructions to his/her native tongue...as long as the translation is right that is :)

2377. New .Z problems

Newsgroup: comp.sys.atari.st
Date: 1996-05-06 00:00:00 UTC
From: gregor@shelly.goldengate.net
Message-ID: <557cc$162c20.24e@goldengate>
Source record: 145843
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Thanks to those who have given me advice on the .Z unix compressor!
However...
this evening I once again dl'd a batch of *.snd."Z"'s (actually came to my server as *.snd."z"s) from Umich. Those that came with a ."Z" extension decompressed flawlessly, but those that came with a ."z" extension were unreadable. I received a no such file/directory error from the Bourne's shell here. I went back to UMICH and dl'd compress.arc, installed it on the system (a mega), and followed the instructions....Still the .snd files were unreadable or unrecognisable. Any hints?

From: Spencer@mettav.demon.co.uk
Message-ID: <12578_Spencer@mettav.demon.co.uk>
Source record: 145844

The following items are for sale.

SM124 mono monitor 60 UKP

4Mb STe computer. Perfect working order. TOS 1.62. 160 UKP

VideoMaster digitiser and colour splitter for the Falcon. 60 UKP

Tape Streamer. 512Mb QIC mechanism with 11 150+250Mb tapes. 120 UKP.

MagiCMac 1.23, turn any Mac (68030 or better, or a PowerMac!) into an
Atari compatible mean machine. 70 UKP

Calligrapher Gold. WYSIWYG wordprocessor. 25 UKP.

EIZO 6500 Flexscan monitor. 21" multiscan monitor, suitable for use
on TT or any VGA type output (does TT high or SVGA, but monochrome
only). 300 UKP, buyer collects.

Stereo Replay sampling cartridge for STFM or STe (boxed and as new).
20 UKP

Proflight flight simulator (for STFM, STe or TT, doesn't work on the Falcon
:-(10 UKP

Vidi-ST video digitiser, this is only the digitising cartridge and no
colour splitter so £20 is the suggested price (inc. P+P)

View II, file viewing program. Designed for integration into the desktop.
Handles many file types (SEQ, pictures, samples, text, etc.) 8 UKP

Timeworks 2 plus two manuals on Desktop Publishing with it. 20 UKP
(inc. P+P).

Epson FX80 emulation cartridge for DeskJet, Deskjet+ and Deskjet 500.
20 UKP.

Printer Port buffer module, made by Paul Rossiter for HP Deskjet
owners. 10 UKP (inc P+P).

E-Mail me with any offers for items you may want.

Spencer

b> Somewhere, I think I saw a note about a fix for TT's having problems
b> with scrollbar double-clicking. What and where is it?

The file you require is either BUTTNFIX by Charles Johnson or SCROLFIX by Ian Lepore - both are accessories of less than 1k. The problem began with TOS 1.04 and is fixed by both programs, although Scrolfix was coded in particular response to TT owners who found that Buttnfix didn't work until after the accessory had been clicked on and exited, so Scrolfix is favourite for you

It should be available at HENSA:

From: Katherine L Ellis <kellis@mtholyoke.edu>
Message-ID: <Pine.ULT.3.91.960506004213.968A-100000@mhc.mtholyoke.edu>
Source record: 145847

Hi, I have a Falcon, And I would like to know if le Redacteur works in 16 colors 640*480 on a SVGA.
Also I would like to know if there is an English thesaurus (I know that the french thesaurus exists, but what about the english one.)
Basically, I'm looking for a bilingual Redacteur in all of the options (dict., thes., etc.)
Is anyone know if there is a french dictionnary and thesaurus for Atari works that I could buy.
Thanks, it is really important..

There problem with AHDI 6.061: With Falcon SCSI it is quite slow. Other drivers
are about 1/3 faster in this respect.

There is no XHDI compliant format. (I suggest you take a look at the XHDI
documentation which is available also in English.) XHDI is a software
extension which is supported by several AHDI compatible drivers. There is
no influence at all of the board revision to XHDI.

I have worked a lot with it and was very satisfied. I don't use it this often now. From todays point of view the TT is too slow for a Unix workstation, of course. But nevertheless in my point of view the SVR4 was the best software ever released for the TT.

No, this won't work. Linux or NetBSD (not FreeBSD) are operating systems of
their own. MagiC is an operating system of its own, too. You can only run one
of these systems at the same time.

Hi,

I had problems getting a TOSdump for the STonX Atari emulator
(installed on Linux).
Starting the TOSDUMP shows a paramter box for the filename,
klick on OK stops it with bombs.

Does anyone knows about this Problem?
I just need a TOS dumped into a file.

Thanks for any help!

> A true 32Mhz 030 might help...
>
>>>>
Aaaahhh, now I remember something: I installed mine myself, kept the
wires as short as possible. Also had to add the complete Clock Upgrade as my
Falcon didn't have it. There is a 1 wire add that is NOT in the manual but only
in the .TXT files on the floppy that comes with the FX. That one wire when I
added it did just what you are seeing. I had to take it out. It had something to
do with a slight speedup with Memory Writes, 3 cycles instead of 4.

Hope this helps; Rich Mier

2390. TT and GCR HELP?

OK,OK....thanks for bearing with me.

I have a 520ST upgraded to 2.5 Meg RAM TOS 1.2, with System Solutions 170 Meg
HD booting from HDDriver 3.7, using Superboot V.7 for disc management. I
inherited the SpeedoGDOS with the hard drive and have not tried to use it before. The
symptoms are as described below, and before
you ask, I have tried running it with all the ACC's and other autoboots disabled
with the same results.

I hope this is clearer.....is there anything else I can tell you? Any ideas?

Yep I noticed that dumb move on his part! Took me a few minutes
to figure out to throw the ttp and zooshl06.zoo on the root of an empty
partition and type x zooshl06.zoo and hit return! Now on the really rare
occasions that a file I need is only in zoo format I don't have to spend
my time wading through the docs again to figure out how to extract the
file! I haven't run across a zoo file it didn't extract properly yet!

What sound file format does the Atari St(e) uses as oppose to Mac AIFF or IBM WAV or the Amiga IFF?/ Thanks Al V.

2397. Advice for the ignorant

Newsgroup: comp.sys.atari.st
Date: 1996-05-07 00:00:00 UTC
From: davidw@mincom.oz.au
Message-ID: <4molqh$6lc@cygnus.mincom.oz.au>
Source record: 145563

Folks - I'm looking for a bit of advice on Ataris. I have an Atari 520ST which I use solely to run Cubase midi composing software. It has a little B/W Atari monitor which for some reason doesn't even display the Cubase screen in full screen. It also has no hard disk and all software must be loaded at boot from a floppy - saving files involves swapping disks a couple of times and there are occasions when I run out of memory by recording too many events.

I'd like to upgrade & buy a second hand Atari with a hard disk, a colour monitor & a bit more memory. Can anyone advise me ? I don't want to get too flash, but I'd like to eradicate the above mentioned inconveniences. So :-

Should I get a 1040ST(E) ?
Does this have an internal Hard-drive ?
Will my current copy of Cubase run on this machine ?
Can I use the midi expander I currently have on this machine (it also contains the Cubase dongle) ?

Any advise / experiences greatly appreciated.

Cheers,

Dave.

2398. 1MB EPROM Program for Atari ST

Hm. Why? Name a good reason!

If someone doesn't want his software to be translated, he might have
reasons. Like, for example, the fear that he won't be able to get new
versions in sync with the translated versions and so on.

If you don't like the preferences of other programmers, just don't use
their programs. It's so simple.

Any text editor will do to read sources.

>Failing this, HTML.APP is also mentioned. Where can one find this?
It should read CAB.APP - if you do not specifiy an external viewer then
CAB's internal viewer is used.

IMO it would make more sense to use the new Linux announced in this recent
press release:

CAMBRIDGE, Massachusetts- Apple Computer, Inc. announced today that it is
supporting a proect with the Open Software Foundation (OSF) to port Linux, a
freely distributed version of UNIX, to a variety of Power Macintosh
products. This version of Linux operates on the OSF Mach microkernel which
will be running natively on the PowerPC microprocessor. The announcement
was made at the Conference on Freely Redistributable Software held in
Cambridge. A demo of an early prototype was shown as part of the
announcement.

> Wish list: Copy/duplicate text blocks

AL> Well, papyrus has got the usual Cut/Copy/Paste menu entries.

Oh, yes. I meant, um, if one sets up an individual text column, independent of the normal text columns. For example, I set up a letterhead with a graphic block & a text block (seperate from the rest of the text). Now, I wanted to copy these two blocks to another page, and couldn't by selecting them with the arrow, and 'Copy'ing them through the clipboard. However:

AL> Before moving them press the Shift key and keep holding it
AL> down. You will get a copy of the element then.

This sounds promising. Thanks. I'll play around with this. And in any case, my overwhelming thanks for a program I really like!!!!!

(PS: I just tried the SHIFT key suggestion - that's _exactly_ what I wanted. It works between documents & everything. Thank you. I missed it in the manual. Gee, now the program is perfect! :)

Hi there,
I'm sorry, but I wasn't clear enough. The arbitration business is with all Quantum's 1GB and larger if I remember correctly. Since they don't manufacture SCSI-HD's less than 1GB anymore, I wrote "new drives" with the current production in mind.

Best regards,

Claes

2408. Re: Atari ST .SNG to PC .MID

Newsgroup: comp.sys.atari.st
Date: 1996-05-07 00:00:00 UTC
From: gregor@shelly.goldengate.net
Message-ID: <567cc$142f2a.147@goldengate>
Source record: 145725

I assume that the .SNG that you are referring to is a Cubase .SNG?
If this is so...
A cubase .sng could be a collection of .mids-- plus the various text
events (the note book), mixer map events, groups, etc. The easiest thing
that
I've found is to convert the various sequences in the .sng into .arrs and
then into .mids. The text and cubase specific events will be of course lost.
Each seq in the .sng would be a different .mid, the group function would
be lost.
Of course....
You could always run the midi chord from the atari to pc and xfer the
tracks that way...

: I'm looking for either an ST or a PC utility which will convert Atari ST type
: .SNG files to a PC type .MID or .SNG file (there are subtle differences.)

: Anyone who can point me in the right direction will rewarded (in heaven.)

: Bless you all,

: Am I the only one that ever noticed zooshl06.zoo on umich? It's a neat
: little dedicated shell specifically for zoo! Or don't those nifty
: aternate operating system let you install programs to deal with archived
: files?

My experiences with zoo archivers have been that they are usually zoo
encoded! I finally managed to find zoo.ttp on UMICH and now all is well.
I use good old fashioned TOS 1.4 on my mega and not a fancy alternative
OS. My concern is not whether there is a specific shell for zoo (or any
other archiver for that fact) but whether there is a good universal
shell. So far, I've been able to unpack LZH's. ZIP's, ARC's, ARJ's, as
well as most of the ZOO's that I've downloaded with 2for1. There is the
occasional zoo that doesn't want to work, though. I have a plethora of
shell programs that only take up HD space. So far 2for1 replaces most of
them.
BTW? why does anyone use zoo these days anyway? It would seem to be in
everyone's best interest to slowly replace the .zoo's with .zip's. Surely
we couldn't expect HENSA of UMICH to take the time to do so. But maybe as
the users of these sites we could do so. Dl a .zoo, ul a .zip in it's place.
It would seem to benefit most atarians in the future!

Source record: 145731

>Where can I get more information about creating memory upgrades for my
>520 stfm?

The 520STFM used the same motherboard as the 1040, with only half the memory chips installed.

If you're handy with a soldering iron, you can melt the solder out of the holes the missing RAM should be mounted in and install sockets and RAM chips.

Use a "solder sucker" to remove the melted solder from the holes.

In addition to the RAM chips you'll also have to install 16 bypass capacitors similar to the ones next to the existing memory, and three resistors to enable the memory refresh lines to the MMU chip.

I don't have the documents handy that give the actual details on the specs for these extra parts, but you can check out the existing resistors and capacitors for the original RAM bank... also there may be documentation available on Atari archive sites like atari.archive.umich.edu or one of its mirrors.

Or... call Toad Computers at 1-800-448-8623 or 1-410-544-6943 and ask if they have any memory upgrade kits for your system.

>SLIP). It's the 'TO' number that I have to pick up when I log on.

hmm - the DNS is the server that STiK uses to resolve names into
dotted decimal addresses (Dynamic Name Server). This is *fixed* and
it's address is given to you by your provider. It sounds very much
like the 'To' you refer to above is your dynamically assigned IP
Address.

The DNS is specified in STiK with the NAMESERVER variable.

The IP address in STiK is specified with the CLIENT_IP variable. As
you have a dynamic IP then set CLIENT_IP = 0.0.0.0 then use the
$GET_IP variable in DIAL.SCR to extract the dynamic IP. As STiK is
connecting, you should see it assign the address just before the
dialogue clears.

Try the IRC client and see if that works.

No, I didn't write any driver. But I'm _very_ interested in your slip driver. If possible, send it via email.
BTW, an interesting to do with the ASV: Install GCC 2.7.2 and then compile X11R5 with it and, if possible, Motif 1.2. This will work perfectly and it's quite like a system update. (Remember to set the Motif 1.1 backwards compatibility flags in the X11R5 sources if you're still using Motif 1.1.)

Hi Hans-Marting, nice to hear from you!

Using ZIP disks with ST and PC is no problem at all. If all your partitions are
< 32 MByte than almost any AHDI compatible driver will do, even AHDI itself. If
you want partitions to be > 32 MByte you will have to use the program BIGDOS on
the Atari in order to enhance GEMDOS DOS compatibility. BIGDOS is free software
and available on ftp://acp5.chemie.uni-kl.de/pub/atari/. BIGDOS prefers XHDI
compatible hard disk drivers, see the BIGDOS README for details.

> selector?

I don't know about the MagiC selector, but don't forget that a large number of apps can be made to work non-modally with Freedom using the "menu bar trick", whereby it sends a "cancel" message to the app, leaving the selector open, then when you select something it makes the app think the menu bar has been accessed again.

I use this system mainly with Everest and Toswin and it it superb! When working on my web pages in Everest a CTRL-O pops up the FS non-modally for me to cut and paste long filenames from - similarly when working from a command line in Toswin. Without this ability I could never handle a CLI!!!!

Freedom has to be the best app I own (and I have some good ones) - I use it more than the desktop for file management, and even for launching apps! Certainly shows that Win95 attempt for what it is!

Cheers,

Xav

I'd use an all in one archiver shell except in my experience by the time
someone finishes writing one that works, it already a couple of versions
behind in at least one or two of the types it is supposed to support!
Don't even suggest that I can put in the new commands by hand in 2for1! If
I was really up to that I wuld be using ttp's! I have 2 Syquests a 105M
and a 135M, space on my hard drive is the least of my problems 8-)
Don't stop at zoo files! Let do away with lzh also! Convert all
of them to zip, so you don't have to remember to use the bin command
before you FTP them! I have yet to run across a system that gets zips as
text, but almost every I have used think that lzh, zoo, tos and prg
extenders mean text and if you aren't careful you end up with a trashed
file!

:(

Mine simply *will*not*run* at 40Mhz. At 36, I have to change the settings, and
then it works ok. It does still seem a bit unstable though... (eg tends to crash
after 5/6 hours usage... its an over-heating problem...)

A true 32Mhz 030 might help...

Regrettably Atari World is no longer being published. The publisher, Specialist Magazines, is going into voluntary liquidation or receivership. Anyway, it has stopped trading and is no longer producing the mag. It also owes a lot of money to a lot of people.

Specialist was closely tied up with Compo Software (UK), which has also gone down the pan, so to speak.

I have spoken to the receivers on behalf of the writers and art editor and they will be announcing a creditors meeting within the next few weeks. Quite what will happen to subscribers is anyone's guess.

If there is money left in the kitty (which I doubt), I would rather see it go to the writers who are owed rather a lot of money and have, IMO, done a great job in the past.

Sorry but that's about it. It was fun while it lasted <g>.

>I registered MegaDepack back in February and have not had a reply :(

Sinister Developments left the atari scene over a year ago... :(

>PS. Any hardened games players out there wanna give me some tips on how to
>get past level four on Llamazap ? The Atomic level usually relieves me of
>most of my lives and weaponry so I haven't got a chance on the Insects level.

Yes, you must make sure that you have insurance for the insects level, as you WILL die there. To do the atoms level, move to the top of the screen. Hopefully the atom will follow you up, then duck underneath. Using this method, you can go and get the 'free radical' which you need to get rid of the electrons (I guess thats what they are...). Make sure you are shooting your awesome weaponry directly at it as you destroy the shell...

Its a little while since I played Llamazap, as I'm stuck (on 'Continual Hassle', in Master mode. :-)

>PPS Has anyone seen an Eagle yet ? What it an awesome experience ? :)

Nope. (not seen it, that is...)

2429. BlowUP FX Questions

Newsgroup: comp.sys.atari.st
Date: 1996-05-07 00:00:00 UTC
From: bili6745@mach1.wlu.ca
Message-ID: <Dr1Ho9.M4E@info.uucp>
Source record: 145746

Hi, I've just started working with a Falcon that has a BlowUP FX board in it but I'm having a few problems with the video modes. The problem is that in some video modes I wind up with a little bit of wrap-around on the left side on the screen. It seems to take from a 16th to a quarter inch from about 2/3rds of the way across the screen and repeat it on the left side.

I guess it's a little hard to explain the problem. If you understand this problem I would truly appreciate any help you could offer.

> cheap sequencer for some of my midi equipment. Kind of a portable setup
> for gigs etc.

ST = Basic ST computer
STM = ST + Modulator
STF = ST + Floppy-drive
STFM = ST + Floppy-drive + Modulator
STE = STFM Enhanced

The STM was generally only available as a 512k 520STM.
The STF was generally only available as a 1024k 1040STF.
The STFM was available as either a 512k 520STFM or a 1024k 1040STFM,
The STE was available as either a 512k 520STE or a 1024k 1040STE.

Some STE's came as 2080 or 4160 models with 2048k or 4096k RAM respectively.

> Also, if there is a quick way to tell how much RAM they have, let me
> know. The prices on these are like 20-40 bux each. (no big investment).

Unfortunately, none came bundled with any quick way of finding out how
much RAM was installed. You'll need one of the plethora of system
interrogation utils available (PD/Shareware)

> Also will be getting the 1224SC(?) color monitor for 40 bux.

The model name for monitors is generally similar in nomenclature
SC1224 = ST Colour 12 inch 2 (version 4?)
SM 124 = ST Monochrome 12 inch (version 4?)

which later became...
SC1435 = ST Colour 14-inch 3 (version 5?)
SM146 = ST Monochrome 14-inch (version 6?)

NO! Don't use a solder sucker, use some de-soldering wick, that absorbs the
solder from the hole, it does a better job and is less likely to tear up the
lands, I recently had to do some circuit repair after someone had used a solder
sucker on a board so I'm more than a little wary of them.

Just trying to help you keep your ST in one piece :)

It doesn't need Falcon. It would help if you told what problems you had
with it and what you tried to do? But basically try just booting the
machine with MiNT (without MultiTOS, of course), and then run oAESis from
Desktop. Should work.

I sometimes get the same using Blowup Hard 1 if I boot in 2 colour mode. I find that changing to a different video mode, then changing back, cures the problem. A pain in the rear, but it works.

2436. TT help???

Newsgroup: comp.sys.atari.st
Date: 1996-05-07 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4mo9kc$5nl@madeline.INS.CWRU.Edu>
Source record: 145753

Please help!
I have a recently acquired TT, and have some questions.
1. My TT has 4+4 MB mem. But it only seems to use 4 MB in TT ram,
as shown by MEMWATCH. The manual, like most Atari manuals,
doesn't say a thing an□bout the two memory □
types. How does it access both banks?? and when??
2. I pulled down the Dipswitch.cpx. What on earth does it do?
Again nothing in the manuals.
3. Does anyone have any idea why ESSCODE 63 or 64 refuses to work
on my TT? It destroys hard disks! I even tried making a mime file
and then un-miming it. It didn't work!!

2437. MagiC4 setup questions

Newsgroup: comp.sys.atari.st
Date: 1996-05-07 00:00:00 UTC
From: ppospis@mtroyal.ab.ca
Message-ID: <1996May7.131644.204@mtroyal.ab.ca>
Source record: 145754

Hi,

I have been playing with setting up MagiC4 on my 1040 ST, 4 Mb and HD for
the last while and have a few unresolved questions:

1) Has anyone figured out how to get external icons added to the system?
I was told that you should be able to place any RSC file in the
gemdesk/rsc directory and be able to access the RSC file contents.
Placing any .rsc file in this directory results in a -69 error when
I try to use the Assign Icon option.

2) Does anyone have any english docs for the purpose and method of
using the programs in the EXTRA directory, i.e.
XMEM_MGR, FLOCK_OK, ADDMEM, HARDCOPY, ROMDRVR

3) Has anyone else had problems with Devpac not finding GEN and MON
on start up? The path to these is fine in the .inf file but gets
corrupted as Devpac starts.

Thanks

>you don't know what your gonna get in the way of real service.

Look Andrew. How about a tad of "get real"?

£25 is high for a signup, I'll aggree. But last month the price for the
service was £5.49 per month on a DD system.
A hell of a lot of others will charge you 10-12 a month. It's still a good
deal.

And no - they don't have atari trained staff. Nor do they have amiga
trained or Mac.
They have a unique PC system, but they installed POP3 and NNTP systems in
case any other platforms wanted to use them.
When Simon Coward came along and wanted to sign up, they gave him an
indefinte trial to get the stuff working. He couldn't - he asked me.
I got it working and Zetnet's technical director, pleased that they could
have other platforms asked me to take an account and look after any atari
users.

As for software, you can either collect it yourself and phone me for any
assistance, send me a disc and I'll do you a fully working package, or if
you have email, as do you, I'll UUe you a full working
STIK/CAB/Antmail/IRC/Mg-FTP/Telnet/OASIS/NOS system as you wish.

When OASIS2 comes along, you will also have the option of regiestering the
£30- (which you'd have to pay where ever you are) and having a new fully

integrated system.

It's not maybe the deal you get with a PC, but hell - It's a damn sight better than most you'd get elsewhere.

So if you'd like to talk to them, want the latest prices, you could ring 01595 696667 (incidentally, how many ISPs do you know who have staff working at 8pm in the evening to answer calls? Zetnet's were when I last called).

if you want any specific info on useability or the service as seen by the user, then feel free to email me.

It's not a con, in fact it's the best value 1006cal coverage ISP for /all/ systems.

Yours etc.

David.

2439. Re: Cheap UK ISP - atari friendly

Newsgroup: comp.sys.atari.st
Date: 1996-05-08 00:00:00 UTC
From: dhend@zetnet.co.uk
Message-ID: <831669744_OASIS_@zetnet.co.uk>
Source record: 145406

In article <39492684_OASIS_NEWS@yr-ynys.compulink.co.uk>
Neil@yr-ynys.compulink.co.uk (Neil Martin) said:-

>>Zetnet are offering a full SLIP connection for under £8- a month (£25
>>setup) with full local access to anywhere in the UK via an 0345 number.
>
>Is that £8 per month inclusive of vat?

Yes.
It was £5.49 per month with a DD scheme last month, if you want a free
(albeit crap ;)) info pack with the latest stuff, 01595 696667 will be
able to help you no troubles.

>Does the £25 setup fee include registered versions of working software
>(else how can you justify it).

'Fraid not - that's exactly what is says. Setup.
You'll have to get your own software which i can configure for you, or if
you have email access, I can UUe you the who bundle at you old address.

>How about some more details like user-modem ratios promised etc?

Can't tell you the technical side of things, sadly - but ring the above
and ask for one of the technical staff if you want. They are /very/
helpful.

All I can say is I have /never/ heard a busy tone yet - but that's
probably not of much help, I'm afraid.

if you have any useability or software enquirys, drop me a line.

Cheers.

Yours etc.

David.

Brad, get SoundLab (shareware from Damien N. Jones, I think $15 for
registration) and the entire world of .WAV files will open up. you can
load, play, modify, and convert to other formats (as well as sampling if
you have the right cartridge - it supports 2, but neither of them is the
one I have). That would allow you to make any WAV into a SND for Superboot,
if that's your desire. Personally, I use play.ttp and play a WAV at
startup.

> it myself, Sys.sol did...
>
>>>>
I guess System Solutions should have some kind of warranty on it so
maybe you should be talking to them. When I first installed mine I didn't know
about the wire. It was while I was trying to get it running, fiddling with the buttons
in the CPX, that I found and read all the Text files on the disk. Seems like they
were buried inside another subdir on the floppy. After I had it up and running a
couple of weeks I went back inside it and added the wire. I made up a work
sheet for all 16 possibilities of the buttons and could not make one of them work
at 32, 36 or 40MHz CPU speed. Removed the single wire and I was back able
to use all possible speeds.
Another thing, this last weekend I tried to install the lastest FX Software.
Nothing worked, couldn't even boot at 16MHz. Fought with it for over 3 hours and
gave up. Re-installed the old FX software and went to 'Playing' with a 'Bad'
Seagate Barracuda, ST12550N, 2.1Gig Hard Drive.

Rich Mier

P.S. ICD PRO handles the Barracuda just fine. Diamond Edge can't handle the
size.

My Falcon has a problem with the left hand audio channel.
Basically the left channel is not working at all. But if I turn up
the volume to maximum the left channel can just about be heard but
it is very crackly.
Is that anything like your problem Jakov?

It has been like this for sometime now. To start with it was an
intermittent think, but became permanent.
I don't use the Falcon for sound very much but it would be nice to
have it working.

Rich.

I can't speak to the TOS/gopher problem, but you CAN view a self-extracting
ST-ZIP TOS file with ST-zip. Just drag & drop if you have TOS 2.0x or
above, or NeoDesk or TeraDesk.

d> Can I use the midi expander I currently have on this machine (it also
d> contains the Cubase dongle) ?

David, if you want a single-piece system with an internal hard drive,
you'll have to get either a STacy (long out of production) or a Falcon.
The Falcon is faster and far more modern, but the least I have seen for one
used is about US$450. If you want an STe with an internal hard drive, get
a Mega STe; it has a 16MHz CPU (vs. the 8 MHz in the STe and your ST) and
an external keyboard, as well as some further expansion capacity via the
VME bus and 3 serial ports. AFAIK it should be fully compatible with
Cubase and its dongle.

a> What sound file format does the Atari St(e) uses as oppose to Mac AIFF
a> or IBM WAV or the Amiga IFF?/ Thanks Al V.

Al, the file format is dependent on the software, NOT the computer. I have programs to play WAV, AU, SND, SMP, (A)IFF, AVR, and probably some others on my Mega STe. Soundlab is a terrific program to both play and manipulate the files, Digistuf is a package that plays only, and WAVplay does exactly what you would think from the name. There is also 525, which converts several formats, and indubitably many others with which I am unfamiliar.

So, to answer your question - "yes." <GRIN>

>support ZIP drives?

FDISK it on the PC, making all the partitions smaller than 32 MB.

Any ST hard disk driver that supports removables will then read and write these partitions. Use at least TOS 1.04. Any driver from AHDI 3.00 and up will do.

bye, Peter

>I had a sanyo drive which didn't work on either my st or falcon. Now
>I've gotten a toshiba 5201b which I can't get to work either. sigh.

Why not? The Toshiba does work perfectly well on either system. For the ST, you might have to remove the PRTY jumper. Get the termination right, and there you go. If you didn't buy drivers yet, you can check the hardware installation using some simple ID-Check software like ICD's, which should then display a "TOSHIBA XM-5201TA".

bye, Peter

2463. Strange Keyboard !

Newsgroup: comp.sys.atari.st
Date: 1996-05-08 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <831664062_OASIS_@phil4.demon.co.uk>
Source record: 145430

Any ideas on the following ???:

Every now and again my keyboard inputs seem to be messed up. The
input is scrambled such that pressing a key, say space will type
half-a-dozen other random chars... strange. Also pressing ALT, and
CONTROL will produce a key click ! and type keys !!!

I have checked out viurses and can pretty much rule them off the list:

I use a boot disk with Medway Boys Virus Protector 4 on,
UVK 5 says there is no virus
the fault is intermittent, and can arrive or go away, with no change
in drive, disk, hardware etc.

having said that, a cold reboot so far has seemed to cure it !

If you have any suggestions then I'd be gald to know what you think !

Thanks

m > geezer's head off, which I don't think I did.

As another American, your message did seem pretty darn strong, while
I took the orignial post as just an attempt at humor. Perhaps it is
just cultural differences that make each other's messages seem
hostile. :)

Fortunately I read the rest of your message, and I really do agree
with all the rest of your post. :)

It's unfortnate that we humans have cultural differences between us.
It would be nice if people could help one another, & translate
between the languages, so all of us can derive use from software, &
of course pay our fair share for it. Unfortunately, from several of
the messages here, it seems this is not to be. :(

BW> I'm looking for a copy of Kennedy Approach for the Atari ST...

I did buy this game a while back - I'm not sure if I sold it already
or still have it. The sound is just _aweful_ in the ST version -
sounds like they were talking through a tin pail! Yish. If I get
some time, I'll look around for it. But I think I sold it off a
while ago, so don't hold your breath waiting on me... :)

Source record: 145573

I recently had the fortune to lay my hands on a couple of PAM's Net/s adaptors.

For those who do not know what it is, it's a network adaptor for Atari that connects to the DMA-port on your ST/STE.

I suspect that this adaptor would perform pretty well once I get it up and running, but the problem is that I have no driver software what so ever.

I NEED that software, and would appreciate if somebody who has got the driver software could mail me.

Thanks in advance!

I'd go for this! It would simplify the process immensely. Apart from your
bin concerns (I've experienced this as well. Even with zips on my ISP!),
why not make life completely easy? When ul-ing files use that nifty
little STZip utility zip2tos. You can't beat a self-extracting file!
Certainly, they're bigger files but you don't need an archiver to access
them. Of course, if you don't have a HD, you run the risk of the archive
and the extracted files fitting on a floppy.

: Don't stop at zoo files! Let do away with lzh also! Convert all
: of them to zip, so you don't have to remember to use the bin command
: before you FTP them! I have yet to run across a system that gets zips as

There is a program called MIDI music maker (MMM) for the Atari ST that
will convert several song formats to .MID.

It supports Music Studio type .SNGs. You can find it one the
umich archive (atari.archive.umich.edu)

> French; go figure...) is English. While it's perfectly
> understandable when people write software in their native language,
> it's NOT reasonable to object to the attempts of others to translate
> it into other languages. That smacks heavily of Jingoism

Just to clarify here, the author has _never_ said don't translate my product. Katherine Ellis who did a RSC hack of Thing, without bothering to contact or even to try and contact the authors, despite a clear statement in the documentation forbidding redistribution of an altered Thing without permission, was asked not to distribute her RSC hack of Thing _because_ a full English version (including documentation) of Thing _is_ available.

(Incidentally, Katherine Ellis has yet to stop distributing her RSC Hack of Thing, despite being refused permission and being asked to stop by Joe Connor)

Thing has been translated into English by Joe Connor and is available to registered users. Joe Connor has stated that he wants and English version of Thing available to non-registered users but that it is out of his hands...

[Stuff I don't believe in/agree with, but a discussion of which is way off-topic, snipped]

> Bottom line: If an author says "don't translate my stuff," his
> wishes should respected. His software should also be removed from
> public ftp sites, I think.

Once again, this is _not_ what the author of Thing has said, there is a world of difference between "dont't translate my stuff" and forbidding someone to distribute a RSC hack of Thing when they a) didn't even try to contact the author and b) there is a full English translation available...

OK, now we have place to start! Do you have that little utility program
that lets your ST know about the extra 1/2 meg of memory in your auto
folder? (Can't remember the name of it)! Speedogdos5.prg or whichever
versions is in your auto folder, both Acc's are on the root of C and
Assign.sys and extend.sys are also on the root of C, paths in both sys
files point to the right places? All the fonts listed in the files
actually exist in the folders listed?
I guess that is enough to start with!

> I suppose this constitues fair and equal treatment?

I don't particularly care to debate the issue, except to say that, for
what it's worth, in my opinion, not having an English version
available to non-registered users is a mistake and only hurts Arno the
longer the situation continues..

BUT, the point of my post was to correct the impression given, which
was that the author of Thing is saying "don't translate my product"...

Whereas the situation is in fact that someone, without even attempting
to gain the authors permission (when such permission was clearly
required by the documentation), distributed a RSC hack of Thing, and

was asked not to _because_ a full English translation is available
(YES only to registered users, but this is an argument for another
time and another place and will not involve me...)...

> Of course he is well within his rights to have it anyway he want it!
> I think I'll stick to the TOS 2.06 desktop thank you.

Your loss IMHO especially if it is because of this shambles over the
translation(s)... Thing is quite simply, in my experience, _the_ best
desktop replacement for Atari computers..

Source record: 145584

Yes! I actually could lay my hand on one of these as well!

It works, and I got a manual, and even a paintprogram for it.
But, <grin> I cant use it in desktop.

The manufacturer of this piece of hardware is Elmtech Research Ltd, UK.
Are they still around?

In the manual there's talk about third party software being developed for
it, does anybody know anything about it?

The graphics-card itself attaches to the cartridgeport, and has got 1
SCSI-port and 1 rs232 port on the back, beside the video-output.
Is there any support for those? Driver routs?

In the manual there's talk about an upgrade board named 8768 and genlock &
digitizer modules, are they available?

They also mentions developerinformation available for it. is it available?

Many questions about this thing. Please, if anybody knows about this, mail
me!!!

Thanks in advance!

Hi, I have few question about Multitasking.

What are the differences between Preemptive multitasking and co?
something multitasking?
How can I use the drive U:?
Is Mint compatible with MagiC?
How can I get a max compatibility with some software.
How much memory do I need to run Magic.
Geneva seems to be more compatible, am I right?
Why is good to have a multitasking environment? How do you use
it personally?

Thanks...
Bye.

There is no specific sample format. If one had to pick one that
originated on, and is most common to, the Atari, then it would either be
.SPL (ST Replay raw sample file) or .AVR (ST Replay PRO mono/stereo
sample).

>
> Hi, I have few question about Multitasking.
>
> What are the differences between Preemptive multitasking and co?
> something multitasking?In co-operative multitasking the operating system has complete control over the
computer until the user does something (eg, move a window) then the appropriate program takes over the computer to process that command (by moving the window) then hands back to the operating system. This means that if a program wants to do some heavy calculation it effectevely blocks the other programs until it has finished and hands back control. A cleanly written program will hand control back every so often to the operating system to allow the user to work with another program. This is why it is called "co-operative", the seperate programs have to co-operate with the operating system to work smoothly.
In a pre-emptive operating system the operating system alocates a slice of time (say, a tenth of a second) to each running program in turn. The programs have no control over this (and, in fact, they don't know that it is happenning). This has the disadvantage of slowing the system down slightly, but has a lot more potential in what you can achieve when programming.

> How can I use the drive U:?

Use MiNT. Drive U is there to make the system look more like a Unix system. In drive U are folders representing each disk drive you have and other things.

> Is Mint compatible with MagiC?

No, Magic is a complete operating system in its own right that replaces all of TOS (the ST's underlying operating system) whilst MiNT is an enhancement of TOS that needs it there in order to work.

> How can I get a max compatibility with some software.It depends on what you are running.

> How much memory do I need to run Magic.

I'm not sure about the minimum amount required, but I should think that 4megs would be a suitable amount to make it worth while. Otherwise you would not be able to really run more than one program at a time, which defeats the object!

> Geneva seems to be more compatible, am I right?
> Why is good to have a multitasking environment? How do you use
> it personally?

I found it useful in writing my final year project report for my degree. I ran Papyrus (the best word processor you can get for the Atari) to write the document at the same time as LDW power (a mediocre spread sheet) to process my results and

Kandinsky (a very good drawing package) to pretty up the LDW power graphs and produce diagrams. This meant that I did not have to waste time in quitting one application to run another. Also, Kandinsky is very good because it allows you to drag files from a desktop window into a Kandinsy window to edit the file.

> IBM WAV or the Amiga IFF?/ Thanks Al V.

Well with the right software it is almost certainly possible to use all of the above ;)

The "official" standard seems to be AVR files, however.

The best piece of software I have found for messing about with samples on _any_ platform is SAM (system audio manager), by SDS and distributed as part of the Falcon package. This little utility lets you primarily assign sounds to system events (opening windows, bootup, etc.) but is also very accessible as a sampler (on a Falcon). Loading in almost any other (uncompressed) format as RAW data seems to work too - you just need to strip the header. I've successfully used Mac, Unix and PC samples this way - though it also handles WAVs.

The only thing I'd like to know about it is how on earth to write a *.SAA file, which allows you to use SAM from your own apps. Can anyone help?

Cheers,

Xav

A file format is only a software thing - there are players on the ST(E) that can
play just about any sound file format. If you're talking actual raw sample data
format, I the STE's DACs expect 8-bit resolution, signed (I think...)

The most common sample file format on the Atari is .AVR (after the originators, Audio
Visiual Research)

>Does the £25 setup fee include registered versions of working software
>(else how can you justify it).

Maybe it's to go towards a comprehensive Atari support desk - you know,
buying up all those ST's, Falcons and TT's, then training up some highly
paid staff to become operational experts on them, plus a fully package
containing fully funtional STiK/CAB etc suite and Oasis 2 (finishing
touches paid for by Zetnet, naturally) and a cash pool for further R&D on
Atari internet applications. If we all switched they could probably fund a
good deal of this. But I bet they won't. Nope, I bet the money will go
towards providing a similar service to that described above....for PC and
possibly Mac owners only.

Cynical, me?

Give us a discount and we might give it a try. £25 is a lot to pay when
you don't know what your gonna get in the way of real service.

2489. CAB 3.0 Finally Works for Me...

Newsgroup: comp.sys.atari.st
Date: 1996-05-08 00:00:00 UTC
From: bjr@EbiCom.net
Message-ID: <4mqji3$66v@Einstein.ebicom.net>
Source record: 145596

At the advice of a fellow atarian, I toataly reinstalled the CAB package from scratch last night...and it works now....for the most part.

I don't have a clue what was wrong in the first set up...as the dial and config files are no different...but it does work now :)

I did come across a problem however....
It seems that CAB, STik, the overlay, or something doesn't like binarys very much, esp. jpg files. The download process will freeze after say a third to a half of the file is downloaded. Has anyone found a way to get around this problem? I've found that hitting esc will move on to the next part of the html, and simply leave out what ever you missed when the page is drawn...but I'd like to get the whole page!

Well, I'd say the CAB package is only one version away from being worth a considerable monetary contribution...if I weren't flat broke, I'd have already sent a tenner...so...I'm saving up clams...and once this baby is grabbing standard pages (gifs and jpegs included) without choking, the project will get a whole weeks worth of my pay! (Sorry, a weeks pay isn't much for me...but it's a true sacrafice...we don't get paid much in bottom market TV :(....)

Based on the very little I know about computers and programing...I feel like this internet package is a true model that the industry should learn a few lessons from. Flexability...barely any hardware requirements... usable speed on very slow hardware...modular approach for adding capabilities such as viewers and listeners. Most definately proof that one doesn't require pentium power to achieve a simple TCP/IP connection. Of course...those of us who have been using the internet since the days that a few 286 PC's, a load of hacked 8088/86s, and a few really expensive 680X0 workstations like Sun and Sparcs ruled the PC market have known that all along. Heck I even remember using a Tandy XT my freshman year in collage as a dumb Xwindows terminal...try to find that software now, and some idiot will laugh at you and say, "Ha! It's impossible." An interesting fact about that old XT based Xwindows term...it used PC GEM as the OS!

There are a number of solutions to your problem. You can add an external hard drive to your existing ST. Get a case, hard drive, host adaptor board or a Link 1 or 2 adaptor, and a DMA cable to connect to the ST. You could buy a machine with an internal hard drive, as well. You may also want to add memory to your 520, and perhaps a later TOS (at least 1.4).

For all those of you in the UK who've created lots of files with 1stWP on an Atari and then moved to a PC, it can be a real headache to get anything to convert the files *and* save all the formatting. Nothing does it perfectly.

But, you can run a version of 1stWP on your IBM compatible! It runs under GEM and was marketed by Digital Research a few years back. I got a copy by advertising in Micromart and got original disks, manuals etc for £20. Okay, it's not the best WP around, but believe me, the conversion problem is a biggee! Just make sure you get the GEM disks as well as the 1stWP ones.

I multitask _a lot_ - mainly for writing my web pages, where I can have CAB and Everest going simultaneously, with Freedom as my fileselector for handling long filenames. I use MiNT/MultiTOS (at least until Oaesis/XaAES improve a bit ;) so I also have a unix shell set up for some of the more useful command line stuff.

I too use Kandinsky - V2 is superb, though earlier ones are very good too. Don't forget that it has full drag'n'drop capabilities - not a great deal of use, since most ither software doesn't :(((but very useful within itself, where you can set up a page full of "standard" components, and simply drag them into drawings ;)

Cheers,

Xav

There is no such thing as Cab 3.0. He probably meant the package
WWW 1.30.
You can always check for current versions of Cab at the authors homepage
http://www.student.informatik.th-darmstadt.de/~aclauss/soft.html
Cab is no at version 1.2b

> this one.

I can't remember exactly, but it's covered in the example config file that comes with Freedom. Make sure you've got the latest version (1.16 in English, I think) though.

The format is something like "APPNAME SELECTOR_TEXT MENU_ID"

You can use the menuid app that comes with Freedom to get the menu ID (funny how!). This doesn't run under MTOS, though, and I don't know about MagiC. If all else fails, run under single TOS for once ;)

Alternatively, _most_ apps seem to have the "Load..." menu option as menu ID 20 or 22. You can always do trial and error (or use an RSC editor???), but since Freedom only parses its config file as it starts, you need to keep killing it and relaunching it for the trial & error method :(((

Hope this helps.

Cheers,

Xav

Source record: 145442

>>Does the £25 setup fee include registered versions of working software
>>(else how can you justify it).
>
>'Fraid not - that's exactly what is says. Setup.

With Demon at 11.75 per month that means it will take 6.66 months (apt
or what?) before any 'Demonic' refugees gain anything. Even pipex
doesn't charge 25 for setup. So how can you justify charging so much
for setup.

Hint: I don't particularly want an answer. I'd like someone like
zetnet to provide a cheap (and that means cheap setup as well)
atari-friendly service. It's my belief the setup fee will put many off
(which is a shame) because they can join other providers for a much lower
initial outlay.

>You'll have to get your own software which i can configure for you, or if
>you have email access, I can UUe you the who bundle at you old address.

I can't fault you for offering to help. It was the support service
that influenced my choice of Demon last year and I have to admit the
potential difficulties at that time might have been insurmountable to
me if it were not for the newly-released oasis. [Please don't be
confused - Demon support has been pretty awful every time I've called
since Frank Charlton left; it was Frank's telephone support which
enabled me to get up and running in the first place.]

Best wishes

Neil

Hi there!

In article <505starship@3rdplanet.com>, starship@3rdplanet.com (Rich Tietjens) writes:
#>I tried a disk cache program here this week - the archive name is
#>TC_TST64.ZIP. It totally trashed my C: drive after about 30 hours of
#>running. I restored from tape - but if the cache program had let me disable
#>write caching, I would not have had to do that.
That's not true. TCache has options to switch off write caching and delayed
writeback. Just read the manual or look at the configuration screens
carefully and you will see. Better do this before posting false rumours next
time...

Ciao

I don't think, that there is a possibiolitz for that. Since Winword is not able to use the Signum fonts, and signum won't use any true types or Type1 Fonts you would have to convert the fonts first. Therefor you need an autotracer for the pixel fonts. Then you need to read the signum file somehow and konvert it to something that winword can read.

The best way should be to kick the PC into the garbage can and buy an atari clone...

dhend@zetnet.co.uk (David Henderson) said:-

>Look Andrew. How about a tad of "get real"?

Apologies - a burst of Demon-esque depression came over me at the time....

>£25 is high for a signup, I'll aggree.

I'm afraid it's too much to tempt me over, whatever the monthly costs: I'd rather pay more monthly (it disappears into the great direct debit black hole so I don't really notice it) than stump up a lump sum for something I can't try out first.

All I really want is a _reliable_ service. Despite my previous posting I'm resigned to not expecting specialist Atari help from any ISP. If I get stuck there's always help available elsewhere (CIX, for example). And to be honest, at the moment the only problem I have with Demon is the speed of their news server. Things have been pretty smooth for a while now (famous last words....) and shelling out 25 quid merely to save the cost of a couple of pints a month without _specific_ data relevant to me is too much of a risk.

I hope this is a more constructive response. When I read magazines with so-called tests pitting ISP against ISP it always seems to me that the information given is largely useless, assuming you can actually get through in the first place. What I want to know is the actual average speed of news downloads, reliability of news servers, mail servers etc. I can't remember the last time I felt the need to ring a help desk - once you're up and running (which didn't seem too tricky when I first started) it's the system tweaks you're interested in, and I wouldn't expect anyone to provide that kind of support.

Andrew

Source record: 145451

In article <135starship@3rdplanet.com> starship@3rdplanet.com (Rich Tietjens) writes:

> j> BUT, the point of my post was to correct the impression given, which
> j> was that the author of Thing is saying "don't translate my product"...
>
> OK, how about the corrected version: Arno has said "don't translate
> my product without prior permission."

No, Arno said in the documentation (from memory) "Thing must be distributed unaltered", clearly a translation involves alteration and in any case Katherine Ellis _did_ alter the Thing archive (added various stuff to it) and then proceeded to distributed it without even trying to seek permission. Katherine Ellis, when she _eventually_ contacted Joe Connor, was refused permission to distribute her archive (though she is _still_ flouting this request).

> I could understand his objection if it were a fully-registered
> version, but what he is doing (or trying to do) is limiting
> distribution of the shareware version to German speakers (or
> readers).

As I understand it, the official stance is that the English version for unregistered users will be distributed as soon as it's ready :

(from a letter from Joe Connor which I have already forwarded in the course of this thread) :-

>JT> And will an English version become available once thing has moved
>JT> on from Pre-Release version? (i.e. generally available, even to
>JT> those who have yet to register?)
>
>JC> Yes, the unregistered English release of Thing v1.0x will be
>JC> uploaded far and wide as soon as it's ready. It's beyond my control
>JC> :-(

So, as far as I know, the reason Katherine Ellis was refused permission is because there is already a Full English version available to registered users and will be one available to non-registered users soon.

> I think that's short-sighted, but he _is_ entitled to do it.

And similarly Katherine Ellis is _not_ IMO entitled to flout his wishes... (even if your Anti-Non-German-Speaking-Peoples conspiracy theory on the part of Arno _was_ true (which I don't believe it to be)...)

> However, I don't think, with an English REGISTERED version
> available, that the German UNREGISTERED version should be made
> available on US, UK, NZ, and AU ftp servers. If there were NO
> English version available, that would be different. Since there is,
> and it is available ONLY to paying customers, I think the product
> should be treated like any other commercial program.

I really don't see how limiting the ftp sites Thing is on by country
is going to help. There is nothing to stop a person from the US, UK,
NZ or AU going to a DE ftp server is there? It would seem pointless
and discriminatory against German-speaking users from US, UK, NZ and
AU (in that you are forcing them to go to an foreign ftp site to get
Thing).

And again, why only US, UK, NZ, AU? Surely these are not the only
countries where German is not a common language/the native tongue?

> OK, your turn - here's the soapbox. <G>
>
> j> (YES only to registered users, but this is an argument for another
> j> time and another place and will not involve me...)...
>
> We'll see about that...

Blah... I'm really tired of this thread... I have stated on more than
two occasions that I think that the unavailability of an English
unregistered version of Thing is doing Arno a lot of damage, but I
keep coming back to this damn thread because I feel to need to try to
correct misinformations/errors and because although I disagree with
the policy that does _not_ mean I sanction what Katherine Ellis has
done (namely - translate, alter and distribute a product without even
attempting to contact the author _and_ when asked not to, ignoring
such a request)...

If STonX can play games on a PC running Linux, then I want it!! At least it seems to have joystick support(still none from the "official" emulator), but do correct if I'm wrong. It would be cool to run it under the Caldera desktop which uses Linux and runs Win 32-bit stuff :)

> UNIX under MagiCMac!!!

No they wont. Because those systems *totally* replace the system and take
full controle over all hardware, esp. CPU and PMMU. So you can just
take away eproms with TOS from your computer if you have appriopriate
loader (called lilo) installed on boot sector of HD.

regards,

Simon.

Hi Tom...thanks again for your input!

>OK, now we have place to start! Do you have that little utility program
>that lets your ST know about the extra 1/2 meg of memory in your auto
>folder? (Can't remember the name of it)!

This I'm not sure about...if I can find out the name maybe I can tell, but I'm
not aware of this being in my HD anywhere, let alone my auto folder!

Speedogdos5.prg or whichever
>versions is in your auto folder,

Yes, it is.

> both Acc's are on the root of C

Er, which ACC's?

>Assign.sys and extend.sys are also on the root of C, paths in both sys
>files point to the right places? All the fonts listed in the files
>actually exist in the folders listed?

Yes, ASSIGN.SYS and EXTEND.SYS in root of C, both paths point to the FONTS
folder in D. Fonts DO exist as detailed. However, have a look at my ASSIGN.SYS
folder to see if you see anything untoward!

```
PATH = D:\FONTS
1P SCREEN.SYS
2P SCREEN.SYS
3P SCREEN.SYS
4P SCREEN.SYS
5P SCREEN.SYS
6P SCREEN.SYS
7P SCREEN.SYS
8P SCREEN.SYS
9P SCREEN.SYS
21 NB15.SYS
31 META.SYS
61 MEMORY.SYS
```

Look OK? In the FONTS folder, there are .SYS files for NB15,META and MEMORY, but
no SCREEN. Is this OK?

That's it. Any thoughts?

Thanks again!

Simon

>you manage it.

I know nothing about le Redacteur, though I presume that it is ST
hi-res only, but my experience with Calamus 1.09 is very similar.

Calamus 1.09 would only work in ST hi-res but if I used Screenblaster
and selected ST hi-res from the desktop then SB would allow me to
choose a bigger res than 640*400.
Choosing 2 colour from the desktop would give me the same list of
resolutions to choose from but Calamus would not work.

I later upgraded to Screenblaster 2 and found to my dismay that
picking ST hi-res only gave me 640*400, SB was bypassed. So I left
SB1 on my hard drive and used it for Calamus.
A couple of years ago I found a patch for Calamus that had something
to do with Magic. The instructions weren't in English so I could
make little sense of them. I ran the patch on Calamus (a backup).
Running Calamus all seemed exactly the same as before, no difference.
Sometime later I, accidently, ran Calamus without changing out of 16
colour mode and some how it worked!

I do not know where I got the patch from or what it was called.

So the moral is?

There is a difference between 2 colour and ST hi-res, there must be
a bit set somewhere or something. le Redacteur must be checking for
this 'bit', as my Calamus did. So can you tell Blowup to use ST hi-
res, rather than 2 colour, with a bigger res?

Rich.

: list them? Thanks!

Try using the which command on tar, ie which tar. That should tell you
where the tar binary file is. With luck, your sysadm will have put all
the archive software in the same directory. cd to that directory and ls
all the files. That should cough up just what you're looking for.

I am trying to get 3 working disk systems working for
my Atari 520 and 1040 systems that I am giving away.

I have forgotten the magic to make a HD bootable.

I have one (of 5 that boots) but I canot seem to make a clone.

The drive is formatted OK, and partitioned.
I have copied the working c: material to the drive,
and can use the Supra tools to talk to it.

I can even run a utility that will mount it and TOS is happy with it.

Still, when I connect it as unit 0 drive 0, NO BOOT!

I am using both the BMS-200 and SH204 and still no boot.

TIA.

Please send Email if you can.

The components Atari used for input/output plugs are _EXTREMELY_ poor
quality. They break quite easily, internally, and that causes little or
no contact with the mini stereo plugs. The capacitor mentioned above is
a new one on me, so it's worth checking this too.

Should be bunch of FONT = BX000043.APD looking thing, these are the speedo
fonts also POINTS = 6,9,12 between each set of .SPD's All of this should
be listed in the extend.sys file on the root of C drive along with the
drivers example DJ5.SYS META.SYS etc.

>much of a risk.

As a fellow Demon user, and a frequenter of the same groups as Andrew, I
have to agree with him on all points. Demon has been a lot better in the
last few weeks. We still get a busy line in the evenings, but once
connected, news comes through without any real prodding. 25 quid to start
up again is too much. I was going to opt for the CiX internet service, but
as no-one has really recommended it, I'm sticking with Demon for now. Now
if a start-up fee was waived, and all things being right, I'd probably
consider another provider. But Andrew, remember all that hassle at the
beginning of the year we had on Demon. They totally refused to accept
nearly everyone in the ip.atari.support area's assertion that demon had
problems at their end, and it wasn't our machines or software to blame!
Belatedly, they fixed things, but I almost cancelled there and then.

>I can't remember the last time I felt the need to ring a help desk - once
>you're up and running (which didn't seem too tricky when I first started)
>it's the system tweaks you're interested in, and I wouldn't expect anyone

JR>
JR> Hm. Why? Name a good reason!

Because he has deliberately limited distribution to those who can read his native language. Logically, if he wishes distribution to be limited, he should be willing to bear the burden of distributing the software himself.

JR> If someone doesn't want his software to be translated, he might have
JR> reasons. Like, for example, the fear that he won't be able to get new
JR> versions in sync with the translated versions and so on.

Considering that there must be at least 6 different versions of ST-ZIP, and as many or more of LZH for the ST, floating about on the Net, all equally available, I'm afraid I consider that argument specious.

Source record: 145477
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,
I'm looking for buying a 1GB Iomega JAZ drive which I want to connect to my 1040ST as well as different PCs. I've got an ICD hostadapter with 105MB Quantum SCSI harddrive and SCSI Tools 2.12.

Has anyone got experiences with that ? What do I have to pay attention to (e.g. formatting and partitioning rather on the PC like in the old days with floppies to make them interchangeable) ? Do I need special drivers for the ST ?

Thanks in advance.
CU, Christian

Hi everybody!

Is there any FAQ for any of the atari usegroups available?

I have an old one dated aug 93, and is wondering if anyone still is
compiling this FAQ?

If there is, please send me the latest installment, otherwise, could
someone please tell me. Because I think this usegroup really needs one,
and if necessary, I'll compile it myself!

Anyway, I haven't seen any FAQ since I first read this newsgroup, and will
happily post the one I got, if someone haven't got a newer installment.

An Atari Laser printer driver ? I think that is (almost) impossible
since the way Atari designed it is that the image is build up in the
memory of the ST/TT and than send as a kind of video stream to the
laser printer while printing it. This stream needs all the CPU speed
availlable or at least NO interruption by any other process. ST/TT
users using this laser printer under (multi)tos know that printing
will freese the computer during the print. You know that that is not
the way that UNIX likes to work.

Regards, Wilfred

This is interesting. Could you post the instructions to some of
the archives where we could all benefit? IDE drives are getting so
cheap and available in America that I am sure a lot of us would be
interested in knowing how to use them.

2549. Re: GCR system 7

Newsgroup: comp.sys.atari.st

Message-ID: <4mude6$as3@bertrand.ccs.carleton.ca>
Source record: 145484

A Mac magazine recently said there is a way to compile the latest system 7 OS so that it will run on even old machines back to the Mac Plus. Since the Spectre GCR runs an emulation of Mac Plus, can anyone say (a) if they have tried this and does it work (b) is there a reason in theory why it would not? If Dave Small is still monitoring the list he may be able to say.

The magazine did say that even if system 7 CAN run on a Plus, it might still not be a good idea. Why not?

What's the sale situation with GCRs and Mac ROMS these days? Are they freely available??

From: josk@stud.unit.no
Message-ID: <4mutr6$nq1@due.unit.no>
Source record: 145485

Would it be possible to use CAB together with Ice? And I dont mean running Ice and STiK together, but writing a CAB.OVL allowing CAB to use Ice as a networking layer.

Perhaps a silly question, but I cant see any reason for the Oasis-guys to spend hundreds of hours writing Spider when CAB is so good... Writing a CAB.OVL would be much more elegant.

F> Any help would be very appreciated thanXs!!

Hi there,
To put it simple: you can't! It doesn't work on the Falcon.
You need to upgrade to version 3.02 if I remember correctly, but even better is
to upgrade to Score2.0x or Audio2.0x...

Best regards,

Claes

David Welford wrote this to All about Advice for the ignorant:
DW> Folks - I'm looking for a bit of advice on Ataris. I have an
DW> Atari 520ST which I use solely to run Cubase midi composing
DW> software. It has a little B/W Atari monitor which for some
DW> reason doesn't even display the Cubase screen in full screen.

The SM124 always has a black border around the picture if you don't try to turn on some adjusting screws inside the monitor -and if you do, you'll probably shorten the life time of it...

DW> It also has no hard disk and all software must be loaded at
DW> boot from a floppy - saving files involves swapping disks a
DW> couple of times and there are occasions when I run out of
DW> memory by recording too many events.

A hard disk helps a lot...
Get a Link-II interface, an external SCSI-box and a suitable SCSI hard disk and you're on the way. You can probably get reasonable prices on used stuff, so keep your eyes open. The smallest HD's that are being manufactured for the moment are 1GB, but you probably won't need that much until you start getting into HD-recording and that means getting a Falcon instead...
You didn't mention which version of Cubase you have, but the newer versions can't run at all with less than 1MB RAM and if you make big arrangements, you should maybe go for 2MB. A RAM-card called XRAM deluxe has place for 4 30-pin SIMM's and can be put in any ST which has the MMU and Video shifter socketed.

DW> I'd like to upgrade & buy a second hand Atari with a hard disk,
DW> a colour monitor & a bit more memory. Can anyone advise me ? I
DW> don't want to get too flash, but I'd like to eradicate the
DW> above mentioned inconveniences. So :-

Don't go for a color monitor - Cubase doesn't work with anything but a monochrome monitor.

DW> Should I get a 1040ST(E) ?

On the STe it's much easier to upgrade the RAM - it has four 30-pin SIMM holders that lets you expand the memory to a total of 4MB.
The ST needs the XRAM deluxe-card for this.

DW> Does this have an internal Hard-drive ?

No Ataris but the Mega STe and the TT has been delivered with internal HD's, so you'll need to get an external.

DW> Will my current copy of Cubase run on this machine ?

All Cubase verions (except Cubase Audio) run on any ST/STe with at least 1MB RAM (the earlier version also run on 512kB), but check out the TOS version - Cubase prefers TOS1.04 or later.

DW> Can I use the midi expander I currently have on this machine (
DW> it also contains the Cubase dongle) ?

Is it a Midex/Midex+ ?
I've used a Midex+ on several Ataris: 1040ST, 520STe/4MB, Mega4ST and there hasn't been any problems.
But Midex/Midex+ don't work with Cubase Audio on Falcon, except as a key-expander :(

Best regards,

Claes

2555. Band in a Box Questions

Newsgroup: comp.sys.atari.st
Date: 1996-05-10 00:00:00 UTC
From: bili6745@mach1.wlu.ca
Message-ID: <Dr6FyD.By5@info.uucp>
Source record: 145490

I've reciently started using Band in a Box again and have found myself looking for a feature
that cannot remember how to do. In version 5 is it possible to turn off the piano and bass (drums?) for periods within the song? (such as solo breaks, or a chorus with kit and bass only.)
I remember how to change the program of an instrument (F5) to somthing like <breat noise> but
you still hear the 'breath noise' slightly in the background.

Keith

My friend's Mega STe won't see a brand new Quantum 2.5" 340 meg scsi 2 hd.
He tried the drive out on his Falcon and it worked perfectly.
He also tried many different hd utilities.
ICD Pro's bootfix program didn't help.

Has he got any hope? Are there any dip switches to set, etc, etc....?

Help! :-)

TIA, Julian.

a > driver recently, maybe I can use that if there's no printer
a > driver for the HP540. I'd appreciate any clue as to where I
a > can find it.

having recently purchased a slightly used DeskJet 540, and
getting great results with it, I'd advise you to get a driver for
the DJ550c or DJ500 - both are compatible with the 540, and are
recommended by Hewlett-Packard themselves as acceptable substitutes
if a 540 driver cannot be found. I use the 550c driver in Calamus SL
for colour work and get excellent results.....

It is possible to display the contents, view docs and process a TOS file using
STZip just as any zipfile.
The only problem is that you have to know that the TOS file is actually an STZip
self extracting file.

>initial outlay.

I'm afraid the 25 quid is standard accross the board. At only 5.49 per
month last time I checked - they have to make some money.
And they've an 0345 number - costy to run.

They won't be reducing the fee, so initially setup people may decide it to
not be in their interest to switch - but anyone without access may want
to go from the outset.
Having said that - if you called them and put out your case, they may
reduce the fee, if they felt they were poaching others custom IYSWIM. This
is standard practice at Enterprise.

g>
g> That's not true. TCache has options to switch off write caching and
g> delayed writeback. Just read the manual or look at the configuration
g> screens carefully and you will see. Better do this before posting false
g> rumours next time...

(1) It's not a "false rumor," it's a report of what actually happened to me.

(2) I read every damn bit of everything that came with the archive,
including some rather useless stuff. I could not FIND any way to disable
write caching. If there is a way, pray tell, in simple words, EXACTLY how
it is done. There is NO check box in the config ACC that specifically says
"Write cache ON|OFF" - I went over it a dozen times before trying the
program, just be be sure.

For your information, I work in a computer lab as a technician, and I am
very familiar with the problems a write cache can cause. It's a good idea,
IF you have a system that will never be shut off accidentally, or lose
power unexpectedly. For most people, it's a terrible idea. That's why,
even where I work, we disable write cache whenever possible.

So, before you post a snotty, useless flame to someone next time, read what
he wrote carefully, then stick your remark in a dark, moist place.

If you have TOS 1.4 or above, just stick in the DOS formated floppy(DD,
not HD) in the ST and use STZip 2.6 Hope this helps...

Yes. Should be possible also in System V.
The printer driverï¿½s for the ATARI laser printers for TOS donï¿½t use
the DMA interrupt (I suppose the interrupt latency on standard 8MHz ST's makes this
impossible). But a TT is at least 4 times faster - can do something more useful during
DMA data transfer.

It's nothing wrong with your Falcon, the 9v is there for driving microphones.
I can't understand why Atari implemented this, who in their right mind would
use a pro microphone plugged straight into their falcons? A normal line-level
input would have been a lot more useful.

2583. All Atarians Please Read! & Reply!

Newsgroup: comp.sys.atari.st
Date: 1996-05-10 00:00:00 UTC
From: tj@godfather.com
Message-ID: <4n0dub$d3l@news1.emplink.net>
Source record: 145518

I have had this message posted online for a couple days and have had a good amount of responses. If you have not responded so far my email about your ideas and thoughts of this new magazine, THEN I WANT TO HEAR FROM YOU.

I wish to hear your ideas and responses. Do you want to keep the Atari platform ALIVE and WELL?? Then respond and be heard. I want this magazine to happen for me, for you, for advertisers, and for all computer enthusiasts. This Atari platform is FUN and we have years of life left right now if we all work together. You never know, if we keep the ball rolling long enough, someone or some company may bring back the Atari concept! Would it not be great if someone acquired the rights to say the never release ST BOOK notebook that Atari was producing and revamp slightly for todays market!! I would buy one for sure.

Anyway, I want to hear from you and need the further data to get the magazine going. EMAIL TODAY!!!!!

Original Letter below......

Hello there folks! I am doing a little research and thought the newsgroups would be a great place to start. I have been toying with the idea for years to produce an Atari based magazine and would like to get some feedback from all you Atarians out there.

Here in North America we do have (2) very fine Atari based magazines; Atari ST Informer from USA and Current Notes from Canada. I want to feel the waters and see if the current market would receive well a new and fresh look at an Atari based magazine.

I have many very good, fun, and new ideas for this Atari magazine and am almost to the point of jumping aboard and joining the Atari magazine crowd. This magazine will mostly cater to the Atari computer line but will have some info for the gamers at heart.

If you are one that currently subscribes to other Atari magazines and would most likey subscribe to a new magazine, I WANT TO HEAR FROM YOU!!

Please email me at:

tj@godfather.com

Just let me know your thoughts and if you truly believe you would be a potential subscriber.

Thanks for help and look forward to many many responses. I would also love to hear from other Atari based magazines on there ideas and insights of the Atari magazine market.

Thanks Again!!!!

Thomas Ferreira

I'm looking for several shareware authors so I can register software,
and I was wondering if anybody knows if they follow this group, or
could give me their email addresses. I would like to contact:

Damien M. Jones (last known address was APO AE, which is
subject to change)
Martin Backschat

(I don't have the list of the rest I wanted to contact...)

Also, is anybody from Marcel reading here? I have some questions
about Marcel before I register. (Because if it lacks certain features
I need, I don't need the program.)

I would appreciate it if anybody can put me in touch with these people.

Yes,there is, presumably a phantom power for an electret mic and is fed by
a resistor(don't ask wich, I don't remember). It's also the reason why it
gives you a bang while plugging in/out a mic(as far as I remember:-)). One
could switch it off by dissoldering the resistors, but much better solution
were to make a real line level input mod. (if you don't use mic, that is).
Who needs an extra 0.3-1.0%THD ? ;-)
BTW, I'v seen mod. docs for that but in German.
Regs,

Howdy again. If you have not already, please read the letter posted to all Atarians in this newsgroup about a possible new Atari based magazine.

After the read, please if you can send me a quick email about your company, etc... and your email address so I can respond to you directly. If a call is better, then a day or nightime phone number on your email and I will call soon.

In the very near future, I would like to discuss with you your business, your product, and a way we can all get back into the Atari product we love and use. I have tons of energy ready to be directed at a magazine project. I wish to put this time and money into the Atari product I grew up with.

I have some great ideas that are ready to deploy and I want to talk to each and all Atari folks out there. End users, developers, dealers, etc... I feel if we all team up together with ideas and some old original Atari enthusiasm, we can in a year from now be sitting on a gold mine.

I do understand the Atari market has shrunk considerably but in some cases when a small group pulls together, they can outperform the larger groups very easily. This is our product and our fun!!

Just give me a quick note and I will be talking to each of you real soon.

Thanks,

Thomas Ferreira

2594. ttp's and the "-help" command

Newsgroup: comp.sys.atari.st
Date: 1996-05-10 00:00:00 UTC
From: andy@urban.prima.ruhr.de
Message-ID: <GEKSEIARUP@urban.prima.ruhr.de>
Source record: 145529

Hi!

My problem:
With some ttp's the screen with all possible commands after typing the "-help" command immediateley disappears. So I'm looking for some tool to hold the help-screen and print it. If anybody knows such tool, please let me know where to get it.

Thanx!
Andreas

I think we both argued our viewpoints in a fair manner without resorting to rudeness. There's many things wrong with how Atari stuff is sold, distributed or programmed. Constructive criticism is the only way forward, and respecting software authors' wishes, no matter how much we disagree with them on occasion, must come high on the list. I think gentle persuasion and encouragement will gain more than sheer rudeness and disrespect.

Best wishes
Mike

Well what is it you want from an isp?

Zetnet do have the setup fee, but that is a one off. CIX is damned
expensive period.

Again - if you talk to zetnet and ask for a discount, you may get one.
Other ISPs do lower signups to poach users from neighbours, but I'm not a
Zetnet employee, so I can't even guess if they would.

>>I can't remember the last time I felt the need to ring a help desk - once
>>you're up and running (which didn't seem too tricky when I first started)
>>it's the system tweaks you're interested in, and I wouldn't expect anyone
>>to provide that kind of support.
>
>Apart from which there's better help and support from fellow users anyway!

Well - depends what you're after.
I am the atari support at zetnet, and whatever provider you choose, you
can't get a better support for atari than that. Look at Netkonect - frank
charlton does there what I do here.

The only operational difference between zetnet and demon is the structuing of mail (demon has personal hosts) and the time delay between manchester and london.
Not a lot.

Ah well - I'm not trying to convert anyone, I'm trying to draw people who don't have full access' attention to the best value national provider.
I make no bones of the fact that 25 quid is too much to pay to change, if you're happy. But as a 1st time - it's great.

Yours etc.

David.

I've been wondering about this for last few months myself. Unless Spider
is near completion now this is, IMHO, probably the best option. It might
even increase registrations.

> Er, I'm using v6.061 (July 17, 1993). Are the UK versions different ?

6.061 is a stragne one - no one at Atari US seems to know where it came from originaly! I took 6.061 and changed the sign on info and then ran both checksum and byte-by-byte comparisons against 6.05c. Guess what? It is the same as 6.05c!

I suspect that either 6.061 came from one of the European Atari operations (when there were such things) and was copied by Atari US with their own version number, or maybe the other way around. Except for the sign-on message they appear to be identical!

Do you ever have seen such a line in any German software-package ?

I hope not. If so, maybe the author had forgotten to write "please
contact me if you want to translate it" behind it.

I had written some accesory-programs. Of course, I had written the
text-files and resources in German - just beacuse it was
intentionally for the German "market". I've never imagined, that my
programs are spread around the world via the net :-). And nobody
contacted me for a translation. Maybe this is the case for some of
the programs you have in mind. If you want a program to be translated
- contact the author.
There maybe are some right-wing "nazi" things going on in Germany,
but this is only a small minority (I hope !!), and I don't think,
that this "virus" has infected atari-programmers yet.

What did you do ?

> I restored from tape - but if the cache program had let me disable
> write caching,

Hm - I don't understand that. I'm using T_Cache since I'm working
with a newsreader. I think, I started 2 years ago. Nothing has
happend - up to now. I configured T_Cache with a write cache only for
drive G:. The big andvantage with T_Cache is, that you can set the
time for the cache-flush. With smartdrive (PC) you can't (as far as I
know). I configured it for 5 seconds. It saves about 90% of
write-acces to the disc !!!
Everytime I want to switch of the computer I'm waiting 5 seconds,
doing nothing. If there's no acces to the disc within this time I can
switch the computer of and nothing nasty will happen.

> Bottom line: if you decide to try this program, watch your computer very

2601. New LaserJet 4 driver for PageStream

Newsgroup: comp.sys.atari.st
Date: 1996-05-11 00:00:00 UTC
From: cpb4@ukc.ac.uk
Message-ID: <536@cypress.ukc.ac.uk>
Source record: 145355
Body handling: Inline uuencoded payload not displayed: hplj4.prt

Hi everyone!

Here's a printer driver for PageStream v2.1 for the HP LaserJet 4.
I don't know if the driver will work with any other versions of
PageStream, but I think it should work with all 2.x versions.
This driver is based on the HP LaserJet 3 driver supplied with
PageStream, which I disassembled, modified and reassembled. I hope
SoftLogik doesn't mind! For the record, this driver describes
itself as "HP LaserJet 4 v1.3beta(rle)".

To extract the driver, feed this message through ESScode or uudecode,
or use the extract option on an rn-derived newsreader such as trn
or strn. I'll try to upload the driver to an FTP site, too.

The main feature of this driver is 600 DPI support. The LJ4's
output looks *really* good at 600 DPI. The default resolution is
300 DPI; select print density 6 in the print dialog to get 600 DPI.
PageStream does not print very quickly at the best of times, and
600 DPI involves handling four times the amount of data that 300
DPI needs, so I've also added RLE data compression.

The compression is not very sophisticated, but it does seem to speed
up printing quite a bit. The driver contains code to analyse the
data and turn compression off if it would increase the amount of
data to be sent to the printer (this *is* possible) so this driver
should never be slower than the original driver. You may find the
compression useful even if you don't have a LaserJet 4; just make
sure you don't select 600 DPI if your printer doesn't support it!

Alignment: I've adjusted the codes the driver send to the printer
so that pages come out aligned correctly on our LaserJet 4. It's
possible that other LaserJets will have manufacturing differences
that cause the output to come out off-centre. If this happens,
sorry; there's not a lot I can do about this.

One last feature; the driver outputs 1024 ASCII NUL characters at
the end of each page. These characters do not print, and therefore
should not cause problems in situations where they are not needed.
The reason for them is to defeat the problem we've been having with
Gemulator, where data only gets sent to the printer in blocks of
1024 bytes, and the tail-end of each page would not print until
some extra data came along to flush the buffer out. The 1Kb block
of NULs acts as this extra data.

We use PageStream on a Mega ST 4 (and more recently a Pentium PC with Gemulator) with a LaserJet 4 to do the necessary typesetting for our printing business. This driver has been in use most days for well over a year now, and seems stable. The only problems we've had with it are bugs in PageStream itself, such as the Intellifont bug, which are more likely to show up when working at higher resolutions. If you *do* find a bug, please email me a description (my address is in the header of this message), and I'll try to fix it.

A couple of general PageStream hints: most of PageStream's problems seem to happen when it is short of memory, so make sure you have plenty of memory free before starting. If you get printed output which doesn't look right -- whole letters missing, or short horizontal lines messing up Intellifont characters -- save your work, quit PageStream, then reload PageStream and your document and try printing again. Quitting and restarting forces PageStream to start off with a clean memory pool and resets the font rendering routines; this often solves the problems.

Have fun!

Charles Briscoe-Smith

Uwe, I don't understand your answer. How can any PC partitions be accessed
on an ST, because the partition tables in sector 0 are very different.

2604. Need TT Keyboard cable Info....,

Newsgroup: comp.sys.atari.st
Date: 1996-05-11 00:00:00 UTC
From: m.harvey@ix.netcom.com
Message-ID: <4n2g4r$1kd@dfw-ixnews4.ix.netcom.com>
Source record: 145358
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

I reciently got one of the TT's from Don Thomas deal, and the way I'm trying to setup my desk, I need a longer cable on the TT keyboard. I know sometime ago, I saw something saying you could make your own cords for the Mega's which use the same type connectors.

Can I possibly just go to Radio Shack and get a phone cord extension cable for a multi line setup (larger connector , right??) and use that. I'd read something about it swaps one line somewhere, but if I extend the same signal from the TT to the keyboard, it should still swap that one wire or whatever it was that was different.

Please post here or send e-mail to m.harvey@ix.netcom.com

Thanks

Mike

Dunno about MagiC 4 but afaik there's no way to stop this under MagiC
2 except to get the program to return positive error codes, and the
only way to do this I suppose would be to use a small utility to
Pexec() the real program and negate the error level before returning.

2609. Falcon Speed

Newsgroup: comp.sys.atari.st
Date: 1996-05-11 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <ZvMtxKg.greg_evans@delphi.com>
Source record: 145363

I have recetly purchased a Falcon Speed but am having a tough time
getting it to recognize my hard drive. I tell the installation
program I have a hard drive and assign the partitions as follows:
TOS J K L M N O P
DOS C D E F G H I
When I run Falcon Speed it always displays Hard drive: None even if
I have set it to boot from hard drive! At least then it won't look
to the floppy but I have no idea what it's doing.

If I boot from floppy and try to get to or format the C drive
I get an "invalid drive" error.

This may be related -- the installation program also refuses to
save my choice of screen colors and always come up black text
on white. It does changes modes, CGA, VGAmono, etc., but they
all look the same anyway.

Help!!!

Greg

2610. OASIS 2 Re-Released

Newsgroup: comp.sys.atari.st
Date: 1996-05-11 00:00:00 UTC

Message-ID: <29857051_000001_OASIS_NEWS@yeadontt.demon.co.uk>
Source record: 145364
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

Many people have been having problems finding OASIS 2 in the places I have uploaded it to, I have takens Nick Flintham's advice and uploaded it to ftp.cnam.fr FTP site in the pub/atari/incoming folder. Apparantly you can download it from there without waiting for someone to place it onto the FTP site. The filename of the upload is OASIS2.TOS (try both upper and lower case from the NOS get command).

I hope this helps anyone who has been trying to get the new version.

Atari have any Falcons they have a very hard timing.
So you don't have a chance to get a nice work at 40/40 or 36/36.

>at 32, 36 or 40MHz CPU speed. Removed the single wire and I was back able
>to use all possible speeds.

Whitch wire you have removed?

> Another thing, this last weekend I tried to install the lastest FX Software.
>Nothing worked, couldn't even boot at 16MHz. Fought with it for over 3 hours and

Release (1.9) have some Bugs..
I can't install more than 4Mb with ALL drivers on one machine...
With 8, 10 or 16Mb FX-Ram this machine goes to crash.

>gave up. Re-installed the old FX software and went to 'Playing' with a 'Bad'
>Seagate Barracuda, ST12550N, 2.1Gig Hard Drive.

I don't no what is the Problem with this Seagate drive.
Some machines makes trouble at 32/32 or at any higher speed by SCSI or IDE.
By trouble at the SCSI-Port you have a chance to fix that with variations
of the clockpatch circuit. IDE, i don't no. Some Signals very fast and
not ready to stay for the correct time. (I think so)

Regards, Robert

No you can't.

You might have been able to once but the permissions on the directory do not
allow users to read. And naturally enough it appears to be empty.

Terrific.

Phil, could I suggest you put it on a BBS, perhaps 42BBS. Otherwise we could
all wait till Monday but I suspect I am not the only one straining at the
leash...

Regards,

>Exactly *where* is it?

The problem is that due to piracy and corrupted files, each upload
must be checked before being made available for download and this of
course takes time. Sadly Phil's choice of sites was once a valid lot
but currently was pretty poor, danny has left Hensa and the Atari
stuff is not being updated, Umich is incredibly difficult to get onto
so we'll have to wait for the mirrors to update and Demon has nobody
doing anything with it eiter IIRC :-(((

2618. FS: Atari MegaSTE service manual

Newsgroup: comp.sys.atari.st
Date: 1996-05-11 00:00:00 UTC
From: boyd@zeno.math.fsu.edu
Message-ID: <4n340k$60t@news.fsu.edu>
Source record: 145372

I have an official Atari service manual, part number C302016-001, for the
MegaSTE computer. It is over 100 double-sided full size pages, including:

complete parts list
repair/diagnostic/testing procedures
lots of huge fold-out schematics and motherboard maps
assembly/disassembly instructions
complete theory of operation disclosure

I was told by Atari that these documents were not released to the public
(when I tried to get one from them). Thus, they are quite rare. This is
a very cool book to have if you like to tinker with your hardware. I
managed to find out numerous things about the MegaSTE that are not
common knowledge as well (for example, did you know that the MegaSTE has
some built-in hardware support for GENLOCK video synchronization?). I also
found the exact tech info I needed to identify and fix two hardware bugs
that my personal MegaSTE had when I obtained it.

I'm taking offers for it, minimum $25 with buyer paying exact UPS shipping.
The manual is in pristine condition, bound with a clear plastic cover.
So, make an offer. This is a great manual for a great machine!

PLEASE MAKE ALL REPLIES VIA EMAIL!!! THANKS IN ADVANCE.

2619. STE to video jacks?

Newsgroup: comp.sys.atari.st
Date: 1996-05-11 00:00:00 UTC
From: boyd@zeno.math.fsu.edu
Message-ID: <4n34nj$60t@news.fsu.edu>
Source record: 145373

I would like to be able to plug my Atari STE and 1040STFM into the video jacks on the front of my VCR. Alternately, I would like to plug them into an SVIDEO jack, if possible. Doing so directly from the "TV" jack on the computers to the video jack on VCR did not work. I presume I need some sort of RF modulator that is fancier than the one I got with the computer (the little silver box that used to come with lots of Atari stuff, including the 2600 line).

Here is an exact technical description of the TV port on the Atari computers:

The (TV port) takes the red, green, and blue video signals from the emitter followers (..) and adds them to the HSYNC and VSYNC signals to form composite video. The composite signal is then modulated onto an RF carrier and locked onto the color burst frequency by a phase locked loop. The RF video is then output to an RCA type jack on the back of the computer.

I got this from an Atari service manual. Unfortunately, I don't know enough about video stuff to interpret it correctly :-(.

Another option would be to hack together something that fits into the monitor port. It makes composite video, red, green, blue, HSYNC, VSYNC, and audio available on various pins. Are any of these what a video jack wants? What about SVIDEO?

Thanks in advance for any assistance. PLEASE EMAIL ALL REPLIES. I WILL POST A SUMMARY.

It actually is in the above path on ftp.cnam.fr.

It's just 'dir' shows nothing. If you do 'get oasis2.tos' whilst in the
above path then NOS will find it and download it. I've just done it.

I hope this helps. I too was very frustrated about trying to find OAsis2
(and I'm a beta tester, so you'd think I'd be in the know. Not.)

- Highlights -

Moniterm 19" 1280x1024 monitor, with graphics card for ST!
Super cheap full-page scanner!
Syquest 44mb removable-platter hard drive, and 15 cartridges!
Some of the best games ever written for the ST, including descriptions!

Below are a bunch of ST items I want to sell or trade. For buyers, highest reasonable offer gets the item, with preference going to those that buy more than one item. Shipping will be negotiated with the offer.

As for trades, let me know what you have and we may be able to work something out. Cash can make up for deficient trade material from either party. Shipping will be negotiated with the trade (though for trades, I often suggest that both parties eat the shipping). Don't be shy, send me some email and let me know what you have to trade.

With respect to trades (or outright purchases by me), I'm particularly interested the following items. Please email me if you have any available.

1. Jaguar systems, games, accessories.
2. Lynx systems, games, accessories.
3. T16 or ICD AdSpeed 8/16mHz switchable processor upgrade for 1040ST.
4. Laserdisc or Hifi VCR player.

So, maybe you see something you want, but you don't have any money and no extra computer stuff to trade? Well, you still might have some trade items I'd be interested in! I'm into home/car audio products, video and laserdisk stuff, PC computer thingies, radio scanners, high quality power tools, firearm and other weaponry stuff, Nokia 232 cel phone accessories, digital and alphanumeric pagers, headset and 900mHz cordless telephones, and NordicTrak exercise machines.

All of the items below are original commercial products owned by me. Unless otherwise noted, all original boxes, manuals, and disks are included. I have cheats for some of the games, and will include them with the sale/trade.

PLEASE MAKE ALL REPLIES VIA EMAIL.

****Hardware****

Moniterm 19" 1280x1024 paper-white monochrome display, absolutely the best way to do DTP (and just about any other kind of serious work) on the ST. Comes with the special video card that plugs into the Megabus on MegaST machines, plus software drivers. Case is cracked in a couple of places, but still perfectly functional. Requires

TOS 1.4 or higher. Virtually all "serious" software supports the
higher resolutions without modification (all GEM compliant programs
are supposed to check, and most do). The desktop is HUGE, equivalent
to slightly more than 4 normal monochrome displays. For DTP users,
you can see two full 8x11 pages side-by-side at actual size. The
display is sharp and easy on the eyes, like a well-adjusted SM124.
Shipping costs would be nontrivial on this item, as it weighs a ton.
This is definitely "poweruser" material. Unless you have some sort
of custom graphics card, you MUST have a MegaST machine (not MegaSTE)
for the included graphics card to work (of course, I happen to
have.... :-).

Img Scan, optical scanning head that attaches to most dot matrix print heads
to produce a scanner. The printer is used to position the material to
be scanned, and is capable of very high accuracy. Great way to start
playing with scanning technology. Several versions of the software
included. Plugs into the cartridge port.

Spectre GCR, cartridge and software that will emulate a Mac Plus, including
Mac floppy operations. Latest version (3.0) of software included.
I can also provide Syquest 44mb cartridges with the Mac system
software preinstalled (Syquests work perfectly in Mac emulation mode).

Monitor Master monitor switchbox, switch between color and mono displays
with the push of a button. Also provides sound and video output
jacks.

Syquest SQ555 44mb removable platter hard drive, fully supported by all Atari
hard drive software. Standard 50 pin SCSI interface, 5.25 half height,
bare device.

Syquest 44mb cartridges, made by Syquest. I have 15 of them, no bad sectors,
factory plastic library case included with each.

Quantum Prodrive 80S 80mb 3.5" hard drive, standard 50 pin SCSI.

Seagate ST296N 85mb 5.25" half height hard drive, old and huge yet reliable
as a rock (for me, at least, as it was my first drive :-).

ICD AdSCSI Plus host adaptor card, includes card, DMA cable, ICD manual,
version 6.55 of the ICD utilities, 50 pin internal SCSI ribbon cable,
mounting hardware.

****PC Hardware****

Adaptec 2940W PCI Fast-Wide SCSI-2 disk controller, one of the fastest SCSI
controllers available for the PC, OEM version, still factory sealed
(i.e. totally unused). Includes card, cable, manual, driver
software. Supported by DOS, Windows, Windows 95, Netware (Novell),
Solaris x86, Linux, etc. This card provides connections for both
Fast SCSI-2 (50 pin) and Fast-Wide SCSI-2 (67 pin) devices. These go
for around $300 in Computer Shopper.

****Application and Utility****

ExtenDOS v.1.21, software to allow use of standard SCSI CDROM drives on Atari ST machines.

Tempus v1.x, excellent text editor, not as good as Tempus II, but no slouch either. Blazingly fast (hence its name), even on a box-stock 8mHz system. Designed for programming, great for general editing as well.

TurboJet, Neocept, fast GDOS print driver for HP Deskjet and Laserjet printers, includes a bunch of 150 and 300dpi fonts. Claims to be 200-500% faster than other HP drivers (for that time, I don't know if there are faster ones out now).

Microsoft Write for ST, buggy WYSIWYG word processor, the only Microsoft product ever made for the Atari that I know of, includes a full copy of Atari GDOS. Can be run from floppies and a ramdisk (Jeez, did I really do that? I must have been really patient back then :-). I managed to produce a bunch of papers and letters with it using only a floppy and color monitor, so it is usable, though certainly not state of the art.

CAD 3-D v1.0, Antic, original disk accidently laundered (don't ask :-), includes original docs plus backup floppy. This is not really for architectural design (i.e. Dynacadd or Autocad), but to make nifty 3D animations for fun.

****GAMES****

Games marked with a * are, in my personal opinion, really killer games. No ST game collection should be without them. Games that are known to not work on MegaSTE machines are marked "No MSTE".

* Populous II, extremely cool god-game, one of the best ST games ever produced IMHO. STE enhanced.

* Time Bandit, one of first ST games ever, Michtron. This is yet another classic that no ST should be without.

* Operation Thunderbolt, sequel to the arcade game with the plastic Uzi submachine gun mounted on it. Uses mouse for control, excellent "blast everything" game. Great explosion and gunshot samples.

* Magic Pockets, platform game by the Bitmap Brothers.

* Escape from the Planet of the Robot Monsters, cool two player simultaneous game.

* Vroom and Vroom 2, my favorite ST driving game, uses mouse for all controls, nice filled vector graphics, very very fast.

* Speedball 2, bionic-enhanced brutal futuristic football, excellent two player simultaneous game.

* Robocop 3, awesome ST arcade game, includes a combat driving game, 3D third-person fighting game (virtua-fighter style, though not as pretty), and a Doom-style 1st-person shoot'em up phase (no texture mapping, bummer). Great game. STe enhanced.

* Menace, Psygnosis, side-scrolling "blast everything" game, very fast, very good. This is the precursor to Blood Money.

* Hard Drivin 2, 3D filled vector driving game, stunt and racing tracks, can play via serial link with ST, Amiga, or IBM PC versions of the same game.

* Armourgeddon, Psygnosis, excellent combo-game, battle a variety of enemy craft in a huge virtual world while piloting hovercraft, tanks, jets, gunships, or bombers. Cool combination of arcade action and strategy. Two player cooperative play via serial link, really cool that way.

* Wanderer 3D, super-cheesy game with one overwhelming redeeming feature: 3D glasses are included. Pretty nifty, though you will go blind if you play too much :-).

* Super Hang-on, one of the best motorcycle racing games for the ST.

* Gold of the Aztecs, platform game with huge sprites, great graphics and sound.

* North and South, strategy wargame with lots of tongue-in-cheek humor, based on the popular French comic. Very well done, and can be configured to play itself. Really shows off an ST.

* Hostage Rescue Mission, control the actions of a team of elite counter-terrorist troops. Great blend of strategy and arcade action.

Driller, 3D filled vector first person arcade adventure, huge game space, similar to Descent on the PC (no texture mapping, of course).

* Stunt Car Racer, One of the best car racing games for the ST. Two player null-modem game is excellent. Original disk, xeroxed docs (I lost my original docs).

Moon Patrol, Yes, the original arcade game. Side-scrolling car game, jump over holes and shoot flying saucers. Conversion done by Atari, just like the original. Original disk, no docs or box (docs are not needed for this game).

Blacklamp, side-view platform game. Collect all the lamps to fight the dragon. Excellent graphics and gameplay.

Barbarian II, This is the sequel to Deathsword, the one or two player sword-fighting game. It is not the Psygnosis adventure game. This is a blood and guts action fighting game. Excellent.

Double Dragon, one of the first beat'em-ups for the ST. Dual player mode is cool. Multilevel side-view platform fighting game. Good. Original disk, no docs/box (unneeded for the game).

Sega Master Mix, this consists of five separate games: Super Wonder Boy (cute isometric arcade game), Turbo Outrun (Ferrari driving game), Thunderblade (combat helicopter game), Dynamic Dux (isometric arcade game, punch bad guys, cute, fun two-player simultaneous), and Crackdown (isometric view "go kill all the bad drug dealers").

All of these are arcade conversions, and all are of good quality.

Awesome, Psygnosis, Several different types of action game rolled into one. Excellent shoot-em up game, graphics, sound, and gameplay all first rate. This one really shows off the machine.

* Wrath of the Demon, side-view scrolling action/adventure, excellent graphics, sound, and gameplay. Four disks (!), extremely challenging, STE enhanced. This is another one that really maxes out the ST/STE hardware.

Swiv, overhead view jeep/helicopter shoot'em-up. Simultaneous two player mode, STE enhanced graphics and sound (will work on ST as well).

* Jupiter's Masterdrive, Ubi Soft, excellent excellent overhead-view driving game with guns. Drive on the moons of Jupiter. Extremely cool simultaneous split-screen two-player mode.

* Alien Syndrome, overhead view scrolling shoot'em up, lots of fun for two simultaneous players. Plenty of fast and furious shooting, lots of weapons, little droids that follow you around and help you out, big ugly aliens, etc. Great game.

Captain Fizz Meets the Blaster-Trons, Psygnosis, sort of like a Gauntlet II in space, best with two simultaneous players (screen is split to give each player their own view). Overhead view, destruction galore.

* Baal, Psygnosis, Excellent platform/adventure game (mostly arcade action). Future setting, sideways scrolling, large sprites, good guns. This is a pretty hard game, but lots of fun.

Sidearms, Capcom, scrolling sideview shoot'em up, mouse controlled, lots of weapons and powerups. Great "mindless destruction" game.

Enduro Racer and Crazy Cars, combo pack, no docs, Enduro Racer is a cross country motorcycle racing game, Crazy Cars is a racing game. Both are OK, though quite old.

Super Cycle, Epyx, no docs, oval track motorcycle racing.

Eliminator, strange driving/shoot'em up game, lots of different weapons and bad guys.

Frostbyte, Starsoft, side-view platform game, I would recommend it for a small child (in terms of its difficulty). A bit boring for us big children, IMHO.

President Elect 1988 edition, SSI, presidential election simulation, graphics are quite lame (mostly text, in fact), but I suppose a political process fan might like it. It does not appear to be particularly tied to the 1988 elections, and has data for US elections all the way back to 1960. Can apparently be used to predict elections as well.

****ST Action Magazines (with coverdisks)****

Issues available: 26, 43, 50, 51, 53, 54, 55, 56, 57, all include coverdisks.

These mags are great for game fans. The reviews help one avoid poor games and select good ones, plus there are cheats for the games, how-to-play guides, and useful non-game related articles (hardware reviews, expansions, etc.). Also, they all have a "best ST games to date" list in them, which is a great way to select the "best of the best" when game shopping (for example, from discount houses who only list the names of the products, with no descriptions). Finally, the cover disks that come with the mags provide demos of games (so you can try before you buy), plus full PD/Shareware games and other software. Most come with two disks.

Also available: three ST Action binders, each will hold about 12-14 issues without any damage or modification (wire-in-the-middle style) and make it convenient to leaf through the mags. Sold/traded only as a group. These are well made, nice looking binders with the ST Action logo on them. Will hold any of the large format UK magazines (A4 size, I think).

> [Formerly: In time past; previously]

It's weird considering ST Format is an 'informal' magazine including the
way they describe terms. It's one of the few comptuer magazines that
don't treat readers as ever idiots who can't even turn on a computer or
techno-geeks who speak incantations of source code over the keyboards, so
I really like it :)

Considering they got an editor who's quite strict(as they would have it),
it's surprising a little thing got slip through. Since it's not usual
like in fanzines, it's not much bother to me. BTW, my computer store no
longer carries ST Format so it's now 100% PC :(

I have to say that TTP's really stink a big fat one :P If I had to use one, I rather just install the application in the GEM menu and double-click on the file like LZH(I know there is a LZH with a Gem interface but with DC programs that I got, I don't need LZH!). You could try passing -h or -p as a parameter, but it varies.

What you need is a program that can let you pause for a keypress after you've run your TOS/TTP program. If there's any more I can help you with than feel free to e-mail me.

This IS possible. Many years ago I saw an adapter advertised in
a Mac magazine that allowed connecting the Atari SM124 to a Mac. This is
back when all Mac's had the 9" mono built-in screen. I'm sure this device
was more than just a cable, but I don't know exactly what electronics are
required for the conversion.

If you are trying to get into Compu$erve, you'll probably fail. However, you need to ask your provider what response is required - the rest of the world (e.g., "the _real_ Internet") has no information about CI$'s internal protocols. And if your provider won't tell you - tell them to cancel your acount immediately, and go find someone who provides GOOD technical support (in other words, they'll try to answer your questions).

Oh, and if you're paying by automatic draw from a credit card or bank account - send registered mail to your bank immediately on cancelling the account, giving the date and specifically denying the ISP the right to draw. Several large online services have been caught charging their former direct-draft customers as much as 6 months after cancellation.

Assuming you're asking how to unZip them, you'll want ST-Zip. It's
available on many ftp sites. Look for a file with a .TOS extension, that
would be the self-extracting archive. You'd be amazed at the number of
people who think it's clever to archive an archiver with the same
archiver...

j> unregistered version of Thing is doing Arno a lot of damage, but I
j> keep coming back to this damn thread because I feel to need to try to
j> correct misinformations/errors

Yet that "need" didn't prevent you from imputing some insane conspiracy theory to me, did it?

j> I really don't see how limiting the ftp sites Thing is on by country
j> is going to help. There is nothing to stop a person from the US, UK,
j> NZ or AU going to a DE ftp server is there? It would seem pointless
j> _and_ discriminatory against German-speaking users from US, UK, NZ and
j> AU (in that you are forcing them to go to an foreign ftp site to get
j> Thing).

There's nothing to stop anyone from going to any public ftp site, except (1) speed of response, which tends to be slower going trans-ocean than within one's continental boundaries, and (2) lack of interest in sites that carry nothing that one can read and understand. Thus, while most sites carry most software, there are a number of specialized sites that are heavily slanted towards the "local" tongue.

j> And again, why only US, UK, NZ, AU? Surely these are not the only
j> countries where German is not a common language/the native tongue?

Sorry, I didn't perform an exhaustive search to determine where German _isn't_ spoken. My point was that, by limiting the shareware version to German, Arno has limited his shareware audience. Why should anyone in the non-.de domains use hard drive space to store something that is of little interest to local users?

If you decide to respond, please try to limit your speculations to the software. I really don't feel the need to attack you (or anyone other than Ralphie) on a personal level.

AIUI, Thing _will_ be translated - but it hasn't been released in an English shareware version yet. I imagine that Arno will reap some significant benefits when it is released. Meanwhile, I'm _very_ happy with Teradesk - and it's freeware.

j>
j> Has he got any hope? Are there any dip switches to set, etc, etc....?

He's trying to use the MSTe's Atari host adapter, isn't he? It won't work.
Period. That HA won't support drives that have parity checking enabled,
and more than a few won't work even without parity. I left mine installed,
but it's not attached to any drives. There are 2 Panasonic CD-ROMs, a
Seagate, a Conner, and a Micropolis hard drive, and an Archive Viper tape
drive on my ICD AdSCSI+ - and all worked immediately when I plugged them in.

IT> Apparently MagiC-PC will run under W95. Is this multitasking
IT> multitasking?

Not likely. The only WIN product that actually multitasks is NT; the
others (3.x, 95) are task-switchers (and don't do it awfully well). I
suspect that MagiC-PC under WIN95 will be crippled rather badly.

Strangely enough, Atari did it right. A mic line at above-ground level has
higher noise immunity that a ground-level line.

I
b> need some sort of RF modulator that is fancier than the one I got with
b> the computer (the little silver box that used to come with lots of Atari
b> stuff, including the 2600 line).

Mickey, the TV Out port on Atari computers (or indeed, and system that had them) is RF-modulated - you have to connect it to the antenna jack on the TV or VCR, not direct video.

What would be better is a cable that connects the 14-pin DIN monitor connector on yout Atari to the direct video and audio jacks. I imagine that Toad could get one - I got mine in Europe, but I'm not going back for yours. <G>

Bottom line: The Atari does produce composite video - the STe even has the stereo audio out jacks. All you need is the right cable.

>CAB.OVL would be much more elegant.

It isn't a silly question but it is practically impossible to
implement.

CAB.OVL is the interface between STiK and Cab itself. With STiK
being an accessory there isn't any problem with running Cab at the same time
(similar to a multitasker).

Unfortunately ICE was written to replace NOS and the high level
routines SMTP,NNTP,FTP etc. and requires a lot more processing time than
the accessory slot will provide.

The main difference is philosophy:-

Do you run STik and then choose which 3rd party high level Internet
routines to run over it and access each one at a time?

Or

Run one program which accesses all of the systems at the same time
but have no ability to choose a different FTP or News system.

If MagiC was running then to be honest it could be done quite easily
but without MagiC you can't get Cab and ICE running at the same time.

When I started writing ICE my main aim was to generate a full TCP/IP
implementation that internally multi-tasks the high level access systems,
which will run on any TOS operating system. I have already received requests
to make ICE talk to HSModem directly, or take control of the modem port but
I won't do this as not everyone runs HSmodem and there are people who access
with different ports, speeds, patches and code. My only requirement is that
the Bios is setup with the correct speed & pointed to the correct port. This
is usually saved as the default options in the control panel.

For these reasons I am not willing to try to make ICE and Cab work
together as it would immeadiately make a multi-tasker such as MagiC a
requirement, now you would have three programs running in memory. Which on a
machine with less than 2 Meg would be impossible.

OASIS2 and ICE will just about work on a 1 Meg Atari.

Spider will be supplied in two forms, a stand alone version to give
people with less memory the ability to use it and for people with more
memory an integrated program of ICE & Spider will be available.

Sorry to dampen a nice thought.

Dave.

Message-ID: <4n0pvu$8l5@madeline.INS.CWRU.Edu>
Source record: 145538

If there is a way, I for one would be very interested.
I think the main reason may be that a Plus, like GCR, is limited to
4 meg of ram. Sys 7 takes up so much space that there is
little room left over to much more than say "HELLO".
Although D. Small is alive and well somewhere in Denver, I
think he is much to busy earning a living, than looking at
posts. I have sent him 4-5 e-mails in the last two months
with nary a peep back.

Hi,

I'm trying to configure Oasis/Nos to log onto my ISP using PPP PAP
configuration.

Using a terminal program to log on I get:-

CONNECT 38400

AutoProtocolDetect - Begin protocol or enter 4 returns for interactive mode.

After I enter 4 CR's I get:-

UNIX(r) System V Release 4.0 (nornet.nor.com.au)

login:
Password:

This takes me into my shell account.

My question is what should I include in my DIAL.TXT and STARTUP.NOS
files to login via the 'AutoProtocolDetect - Begin protocol' mode.

Cheers, Neil.

>cases.
>
>Zetnet /may/ be willing to lower it if they consider themselves "poaching"
>you from demon.

You posted the original advertisement. You are obviously involved with Zetnet in some way (no criticism intended or implied). A few of us have taken the trouble to point out to you that your idea is sound in principle but we won't pay the setup fee. I think the ball is pretty much back in your court now.

I hope you talk to Zetnet and persuade them that, for the sake of a few setup fees, they could pick up a small community (I'm presuming their service will be as good as you describe of course).

Best wishes

Neil

Any ideas anyone?

I run a BBS under magic (great disk access and fab comm port handling)

BUT I have a problem...

Several programs I run use errorlevels to indicate for example an abandoned download or the number of minutes to deduct from a users time.

Only trouble is , these are negative errorlevels...

Magic comes up with a dialogue box stating a system error , halts and stays that way.....not very useful...

Anyone any ideas how to stop this?

I subscribe to both ST Informer and Current Notes. Also ST Format (through TOAD). But the Atari World/Jaguar's Edge/Processor Direct/Atari Advantage and START fiasco's sure would make a new magazine a chancy thing.

I'll continue my subscriptions with the established magazines. I think they need ALL THE SUPPORT we can give them. Both in subscriptions and in article contribution.

As far as the ST Book .. It'll never fly unless it has a built in floppy drive.

Date: 1996-05-11 00:00:00 UTC
From: gmiller@inca.co.nz
Message-ID: <4n1fds$pg6@inca01.inca.co.nz>
Source record: 145545

On the back cover of the May 1996 issue of ST Format, where the cover disc contents are "advertised", a glaring error in grammar appears in the description for STOS Extra.

"Formally a commercial product, STOS Extra is now shareware"

The out-of-place word is "Formally".

The correct word for the sentence would be "Formerly".

[Formally: In accordance with convention; conventionally]
[Formerly: In time past; previously]

From: josk@stud.unit.no
Message-ID: <4n1sem$nop@due.unit.no>
Source record: 145548

Dave Levi (dave@levihome.demon.co.uk) wrote:

: If MagiC was running then to be honest it could be done quite easily
: but without MagiC you can't get Cab and ICE running at the same time.

But a lot of people have high-spec. Ataris (Or macs) running MagiC! If it could be done "quite easily" as you put it, why not just do it? You don't have to write a CAB.OVL, just make it possible for other programs to access ICE's TCP/IP-stack under multitasking systems.

: which will run on any TOS operating system. I have already received requests
: to make ICE talk to HSModem directly, or take control of the modem port but
: I won't do this as not everyone runs HSmodem and there are people who access
: with different ports, speeds, patches and code. My only requirement is that

Perhaps you could include this as an option in future versions?

: For these reasons I am not willing to try to make ICE and Cab work
: together as it would immeadiately make a multi-tasker such as MagiC a
: requirement, now you would have three programs running in memory. Which on a
: machine with less than 2 Meg would be impossible.

Correct, but having the above mentioned features doesn't exclude anyone from using Oasis2 and ICE, but it give users with more powerful computer more options.

: OASIS2 and ICE will just about work on a 1 Meg Atari.

Nice :)

: Spider will be supplied in two forms, a stand alone version to give
: people with less memory the ability to use it and for people with more
: memory an integrated program of ICE & Spider will be available.

I guess the stand-alone version will include the TCP/IP-stack from ICE? How is Spider doing anyway?

a > old stuff. I thought I saw someone talking about a HP660(?)
a > driver recently, maybe I can use that if there's no printer
a > driver for the HP540. I'd appreciate any clue as to where I
a > can find it.

having recently purchased a slightly used DeskJet 540, and
getting great results with it, I'd advise you to get a driver for
the DJ550c or DJ500 - both are compatible with the 540, and are
recommended by Hewlett-Packard themselves as acceptable substitutes
if a 540 driver cannot be found. I use the 550c driver in Calamus SL
for colour work and get excellent results.....

About month(or few weeks) ago I downloaded Falcon gamedemo
from cnam. I don't remember the name of the file.
It was infected by a virus which does a hidden file
~.prg in /auto/ folder. Here in newsgroups was stated
that deleting it is a solution. I thought so until...
...yesterday I noticed that (message?) 'B[)J[B' or
something like that, pops up on my screen again. Aarghhh.
Yes, there was ~.prg again in my /auto/ folder.
Is there any solution of deleting that ****ing animal ?

>thoughts to me. I'd be grateful.

>

Just a thought, but does your ISP send out the HELLO ???
if not OASIS2/ICE will sit around wiating for it till the cows come
home. !

Best thing to do is to log on with a normal terminal program, and find
out what is sent after your IP address, instead of maybe the HELLO !!

If you still can't find anything, then remove the line 0:r-HELLO and
0:s-

Also try removing the leading characters from some things. For
isntance your modem on occasions will miss the fisrt character of the
word, say IP address: and will instead only get P address: or in
extreme cases ddress: etc. etc.

So what you can do is to change the 0:r-IP address: to 0:r-ddress:

as long as this phrase doesn't occur anywhere else in logon, you will
be fine.

Hope this helps !

ATb.

The following items are for sale:

SM124 mono monitor 60 UKP

4Mb STe computer. Perfect working order. TOS 1.62. 160 UKP

VideoMaster digitiser and colour splitter for the Falcon. 60 UKP

Tape Streamer. 512Mb QIC mechanism with 11 150+250Mb tapes. 120 UKP.

MagiCMac 1.23, turn any Mac (68030 or better, or a PowerMac!) into an
Atari compatible mean machine. 70 UKP

Calligrapher Gold. WYSIWYG wordprocessor. 25 UKP.

EIZO 6500 Flexscan monitor. 21" multiscan monitor, suitable for use
on TT or any VGA type output (does TT high or SVGA, but monochrome
only). 300 UKP, buyer collects.

Stereo Replay sampling cartridge for STFM or STe (boxed and as new).
20 UKP

Proflight flight simulator (for STFM, STe or TT, doesn't work on the Falcon
:-(10 UKP

STWorld magazines, issues 24 - 26, 29 - 32 and 34 - 53.

Vidi-ST video digitiser, this is only the digitising cartridge and no
colour splitter so £20 is the suggested price (inc. P+P)

View II, file viewing program. Designed for integration into the desktop.
Handles many file types (SEQ, pictures, samples, text, etc.) 8 UKP

Timeworks 2 plus two manuals on Desktop Publishing with it. 20 UKP
(inc. P+P).

Epson FX80 emulation cartridge for DeskJet, Deskjet+ and Deskjet 500.
20 UKP.

Printer Port buffer module, made by Paul Rossiter for HP Deskjet
owners. 10 UKP (inc P+P).

E-Mail me with any offers for items you may want.

Spencer

2668. Problems with Lharc

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: jamesl@efn.org
Message-ID: <4n4l4t$hbf@garcia.efn.org>
Source record: 145265

I've got a problem with my ST that's driving me nuts and I can't seem to make any headway into it no matter what I try.

The system I'm using is a 520ST that has been expanded to 1 meg and uses (I think) Tos version 1.0. What's been happening is that I cannot uncompress any files with an .LZH extender. When I try, the lharc program either give me a 'crc err' or 'bad table/encrypted file' error message after unpacking the first file in the archive. What's bugging me is that it does this no matter what version of lharc I try, and no matter what archive file I try to unpack. I've spent literally hours trying various lharcs on various files, and it *never* works. Even worse, it won't unpack files I know it has unpacked in the past.

Of course, a lot of the files I can get over the net are archived with an .LZH extender, so there's a fair amount of software I am not able to use. There's even a bunch of lharc versions out there that have been packed with lharc, so I can't even unpack them to try them out. Argh!

Anyway, if anyone can give me any ideas or suggestions to try, I'd be most grateful. I can provide more detailed information on request.

Thanks!

2669. Looking for Degas

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: jamesl@efn.org
Message-ID: <4n4ljv$hgk@garcia.efn.org>
Source record: 145266

I once had a copy of the paint program Degas, until it and its backups were damaged by some disk problems I had a couple years ago. The original disk went bad long before and was tossed, and the box and manuals were lost a couple moves ago. Still, I miss the program sometimes and wish I knew where to locate another (legal) copy. I don't even remember what company produced it.

Can someone give me any ideas on how to locate another copy? Failing that, are there any PD paint programs on the net that can use Degas pics? I know the latter is unlikely but I figure it's worth a try.

Anyway, thanks...

Most of the SCSI-CD-ROMs need a Parity-Signal from the Hostadapter.
Make sure your Adapter generate this Signal..

(Zip-Drive, same Way, can't work without Parity)

You are sure that LOG3 cardride is OK?

>2. Message: CRC error in ROM E

-That looks like an adress-error or also..
Remove all external Parts from your machine and reboot.

-The machine will not boot..
Switch your machine OFF
Have a look at your TOS-Chip (under your 4/14Mb Memoryboard)
Put it safely out, and press it in his socket again.
(If you not have the right tool, use two very smal screwdrivers)
(Remove this Chip very softly!! Do not touch the Socket!!)
Start with 16Mhz so you have a active FX-Board..

(Make shure this chip have the right position!)

-If your machine coming up, add your harddrive and reboot.

-The machine will not boot again..
Use BOOTKONF.PRG and check you NVRAM-Setting...
Write this Setting NEW in your NVRAM.

Add your Harddrive and reboot.

-This all will not work:

So i think you blown your romport..
Take a checkmodul an test this machine step b step.
(Watch out for timeouts ect..)

(Use your next Atari Servicepoint, so you have some one) :/
(Right, that's not funny)

Sadly it's no longer available except possibly if some people have old
stock, I think Toad was clearing some stuff out recently you could try
them.

Your 2nd request is far from being unlikey, the Degas format is pretty
much the standard (or at least the un-compressed on is) look out in
an ftp site and see what is about, a good replacement is Canvas as it
is similar but with more features.

Have you set typed "binary" before downloading your files so that they
are not translated to ASCII? It's the only thing I can think of unless
it doesn't like Tos 1.0 as a lot of newer progs require 1.4+.

Date: 1996-05-12 00:00:00 UTC
From: daveb@mbha.demon.co.uk
Message-ID: <831884896_OASIS_NEWS@mbha.demon.co.uk>
Source record: 145273

OK, got Oasis 2 this morning. Has anyone found screen display problems with Magic4? I run it at 1024x768 and it looks like a gadget (looks like on of the cound meters you get on a stereo) gets repeated across the screen.

Also, if I send a mail post out, it seems to post repeatedly until I delete it from the outgoing folder. The same goes for news posts. Bummer. Perhaps I have the system set up wrong? I think Phil will have 19 copies of an email I sent today :-(.

When sending a mail or news post, and when saving/exitting from the editor. I get an error which says 'File # wrong'. I then get crashed out of Oasis with a TOS error -233. Again, probably something I am doing wrong but I can't think what. Any ideas anyone?

Regards,

> conspiracy theory to me, did it?

I don't see the link between feeling compelled to speak out when you
claim that Arno has said "Don't translate my product" and summing up
how I see your attitude. "imputing" and "insane" are hardly unloaded
words themselves...

>j> I really don't see how limiting the ftp sites Thing is on by country
>j> is going to help. There is nothing to stop a person from the US, UK,
>j> NZ or AU going to a DE ftp server is there? It would seem pointless
>j> _and_ discriminatory against German-speaking users from US, UK, NZ and
>j> AU (in that you are forcing them to go to an foreign ftp site to get
>j> Thing).
>
> There's nothing to stop anyone from going to any public ftp site,
> except (1) speed of response, which tends to be slower going
> trans-ocean than within one's continental boundaries, and (2) lack
> of interest in sites that carry nothing that one can read and
> understand.

Again you are assuming no one outside of Germany speaks German. Joe
Bloggs lives in the US, Joe Bloggs learnt German at school, he's not
fluent but he knows enough German to get by. Joe Bloggs has heard
about Thing and is looking for a replacement desktop. Joe Bloggs goes
to his local FTP site and looks for Thing...

Now if Thing is, as you suggest, not put on US FTP sites : lo and
behold it's not there, Joe Bloggs is forced to go a German FTP site
with (for him) a much slower download speed.

If Thing distribution isn't restricted Joe Bloggs downloads Thing at a
much faster rate from his local FTP site...

(Note: because Joe Bloggs speaks German he personally doesn't care
that, at that moment, there is only an English version available to
registered users, his German is sufficient for him to test Thing and
decide whether or not he wishes to register it)

Now do you understand my point? By limiting Thing to certain FTP
sites you are discriminating against German speaking users from
outside the range of the select FTP sites. How does having Thing
freely available from any FTP site in German hurt anyone? (with the
exception of Arno as those users who _don't_ speak German aren't going
to try it and therefore obviously aren't going to register it)

> Thus, while most sites carry most software, there are a number of
> specialized sites that are heavily slanted towards the "local"
> tongue.
>
>j> And again, why only US, UK, NZ, AU? Surely these are not the only
>j> countries where German is not a common language/the native tongue?
>
> Sorry, I didn't perform an exhaustive search to determine where
> German _isn't_ spoken.

Why would you need to? My objection was to you limiting the countries
where German is not a common language/the native tongue to a mere 4, I
didn't expect you to produce a list of 100+ just to acknowledge the
other countries in some way.

> My point was that, by limiting the shareware version to German, Arno
> has limited his shareware audience.

My point (which you cut out of your reply) was that Arno was not
trying to limit his shareware audience and that an English translation
would be available as soon as possible (a fact which you acknowledge
in a later reply to this thread) :-

|>From: starship@3rdplanet.com (Rich Tietjens)

|>
|>AIUI, Thing _will_ be translated - but it hasn't been released in an
|>English shareware version yet.

> Why should anyone in the non-.de domains use hard drive space to
> store something that is of little interest to local users?

But my point is you are assuming that no local users speak German.

> If you decide to respond, please try to limit your speculations to
> the software. I really don't feel the need to attack you (or anyone
> other than Ralphie) on a personal level.

I don't know what the problem with what I said is, if you feel I have "attacked you on a personal level", please elaborate...

Brian,
This will work ok, let me suggest that your image insert may work
better as If you include the width and height the browser can load
the text quickly then go back for the graphics which allows quicker
page viewing.

Unfortunately the group comp.binaries.atari.st is defunct, as is also
the comp.sources.atari.st, since early this year. If this groups are still
present at your newsserver it's a bad configuration...

It's listed in the "Bogus newsgroups" article from
news.announce.newgroups. The whole story is that the moderator posted a
request to c.s.a.st saying he wanted to stop this group, because of lack
of postings to it... as there was only 2 or 3 persons to say him to
continue...

Hi,

that's exactly the same problem I experienced some weeks ago!
And the solution is simple, because I think, the origine of the
problem is a matter of "binary" versus "ascii" download!
With simple ftp you may easily say "bin", but with some browsers .lha
or .lzh is not recognized as "binary"; for example, I was frustrated
by Netscape for Windows 3.1; even if I configurated it for "binary"
download (as to lha-files), the result was "ascii"! I couldn't solve
the problem, since it was due to the configuration of our universitary
proxy server, individual configurations were ignored and useless!

So, as a simple solution, I'd suggest, you download with traditional
ftp and saying "bin", then everything should be fine!

Greetings from Germany

Manfred

Yes, you can. I've just got it. Having trouble setting up the newsgroups
though :(

Anyway, ftp to ftp.cnam.fr, go into the pub/Atari/incoming directory. It won't
be shown but just type get oasis2.tos and there it is ! YES !!

I fully expect this newsgroup to be full of HELP ! threads concerning OASIS 2
very soon....:)))

See Ya.

I got it from ftp.cnam.fr/pub/Atari/incoming as oasis2.tos - however you
can't see it when you list the contents of the folder. I promise you it is
there - you need to type get oasis2.tos, so a graphical ftp prog like
mg-ftp can't handle it. Other sites will be updated on Monday, apparently,
and you'll be able to get it from demon, hensa, etc then.

2686. OASIS2/ICE Hints

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: phil@yeadontt.demon.co.uk
Message-ID: <83058398_000001_OASIS_NEWS@yeadontt.demon.co.uk>
Source record: 145283
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

Hi Guys,

I will be posting general hints for OASIS2 and ICE into the news groups
and probably building it upto into a full blown FAQ. Sore here is the first
one.

Phil Hough asked about a strange problem on his Mega STe.

>I seem to have rather a large problem.. with Ice (rather than Oasis2
>the program). On loading ICE.PRG from the desktop, not through
>Oasis2, and without connection, the program loads and displays the
>menu bar acrros the top, and stops (as it probably should). Thr mouse
>cursor can be moved as normal, but is unable to access the menu bar,
>the menu bar simly does not react.
>
>The same occurs when connecting through Oasis2, the ICE program goes
>through its connection phase, and then connects, and starts to get the
>news. however it stops there, as the mouse can still move as usual,
>but again the menu bars are unaccesable.
>
>And so in both cases the program appears to freeze, the olny way to
>stop the program is to reset.
>

The cure for this is to run the ICE_NET configure program select go to
the General Details dialog. At the botom of the dialog is a popup for the On
Screen Clock, turn it to OFF. You will still get the clock in the top
corner of the screen, but it won't use the interupt driven system that seem
sto cause STe and Mega STe machines some problems.

If you have any problems/queries/suggestions for the OASIS2/ICE package
send the them to us as below:-

OASIS2 Phil Yeadon
ICE Dave Levi
ICE_NET Phil Yeadon
OA_CODER Phil Yeadon

Our e-mail addresses are as follows:-

Phil Yeadon phil@yeadontt.demon.co.uk
Dave Levi Dave@levihome.demon.co.uk

I hope that the above helps.

> Anyway if anyone who has taken the time to read this, has any
>idea why this script dosen't seem to work would convey those
>thoughts to me. I'd be grateful.

This could be one of two things:-

Does the dialer come up with anything else after the IP or does it
just hang.

If it comes up with something then does it ask another question eg.
account or something. The last receive without a send ('HELLO') is just a
dummy to allow the dialer to know it has finished. It checks to see that
'HELLO' was in the last block received and if so will then exit the dialer.

But it may not be the dialer :- Check to see if the menu's still
work. We have discovered a problem in accessing the 200Hz clock on STe's and
we had to add a clock patch which can be turned on by turning the clock OFF
in ICE_NET.

You didn't say what computer you've got.

If you still have trouble e-mail me and we'll see what we can work out.

Dave.

2688. OASIS2/ICE Information

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: phil@yeadontt.demon.co.uk
Message-ID: <190913_000001_OASIS_NEWS@yeadontt.demon.co.uk>
Source record: 145285
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

Hi,

Any problems that are reported with OASIS2 or ICE that are not machine specific will be posted into the news groups so that everybody can find out about them. I will include the version number and program name I am refering to with each comment.

OASIS 2.00

Anybody Experiencing the 'File #' Error while creating news articles can cure the problem by turning OFF Post Local in the Preferences dialog. I have fixed the problem and will be releasing a new version later in the week.

The manual states that when convwerting News from version 1.00, that all files from the OASIS\SPOOL\NEWS\NEWSBASE to the OASIS2\NEWS\NEWSBASE folder, the files should actually be copied to the OASIS2\NEWS\ARTICLES folder.

ICE 1.00

If you select to send news only while loginh on, ICE will still download news and then post the new news items. This bug has been fixed and a new version will be releaed later in the week.

Sorry for the inconvinece.

Get file lha310.tos, it's the latest lzh archiver that comes with a nifty
shell program! Be sure to ftp it in binary mode with the bin command
other wise most ftp programs will download it as 7-bit asci and trash it
rather thoroughly! It's also self extracting, so you shouldn't have any
trouble that way! Don't worry about it telling you that there is xxbytes
of garbage at the end of many older lzh files, they extract fine!

2692. What are Atari Falcons selling for these days?

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: fluke@MCS.COM
Message-ID: <4n5c9b$adk@Venus.mcs.com>
Source record: 145289

I am courious to know what the going price is for Atari Falcons.
Shortly after I purchased my Falcon, I got fed up with its ST-like case, so
I re-cased it into a PC-tower case, and added a 345 meg SCSI drive to replace
the 80 meg IDE, and also added a Screenblaster I inside my case.
Without concerning yourself with the value of the software on the hard
drive, what would you think that value of this machine is? The reason I ask thisis out of
simple curiosity, nothing more, nothing less.

Thanks!
Greg Linder

>emulator), but do correct if I'm wrong. It would be cool to run it under
>the Caldera desktop which uses Linux and runs Win 32-bit stuff :)

Yes, it can play games. Where do you get the impression that it can use
Joysticks though? That feature hasn't been added yet that I'm aware of.

Still, I've gotten it to play quite a few games.
I have a www page for STonX that has both a list of software that's been
tested with it, and a page full of screenshots of mostly games running
under STonX.
It's at http://www.users.fast.net/~smol/stonx.html

------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

FURTHER INFORMATION ABOUT NAS96

The best way to get new information is to join our NAS96 mailing-list.
Write to nas-users-request@tripnet.se and include the following in the
message text:

subscribe nas-users <your email address>

Our homepage is also informative to visit. It is at
http://www.tripnet.se/sak/nas and is updated whenever it is needed.

If you want more information about NAS96, then use any of the addresses or

True, Eric, but that kind of situation usually leads to steady upward or downward trends, not sudden spurts like we've seen in the last couple weeks. I suspect there is some key information floating around that is not public yet. Possibilities would include likely results of current legal actions relative to Atari or how much control JT may actually gain in the merged company.

2701. Wanted: ST cable

Message-ID: <4n5l0e$qqt@news.fsu.edu>
Source record: 145298

I need a cable that already has the plug on it to fit the monitor jack on the back of any Atari ST(e) computer. This could be cut off of a dead monitor, Monitor Master, multisync switchbox, etc. I could offer some meager amount of money for this, plus shipping, or I could trade for an item off of my Atari forsale/trade list (obviously, not all items are viable candidates for this :-).

If you have such a cable, let me know and perhaps we can work something out. Thanks in advance!

PLEASE EMAIL ALL REPLIES DIRECTLY TO ME.

2in1 copes with self extracting LZHs and ZIPs.
Well, it does for me. I created an LZH and then turned it into an
SFX, which gives a TOS file. 2in1 showed the contents just as it
did with a ZIP.

Rich.

2703. Problems with Cab, WWW130

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: garn9114@kutztown.edu
Message-ID: <4n5sk6$qmq@jake.esu.edu>
Source record: 145300

When I first downloaded WWW 1.30 I was thrilled to see Atari finally doing most of the same Internet stuff PCs could do. A great web browser, email, Ftp, telnet, everything I've ever wanted (short of tin). Later uses, however, have revealed quite a few problems I'm having. If anybody else is having these problems, or knows of a possible solution I'd love if you could email me back.
Cab, for instance, looks great. But after a few pages or any large page it bombs out and crashes the computer. I tried taking the images off and going text-only. That limited some success, but not total. Other times it will hang on the "Resolving host" message for minutes. If I'm lucky, <ESC> will get me out of it, but more times than not it crashes the computer. For the record, the internet cache is set on 10 Megs, and looking at the directory (which I have set as "F:\CAB\CACHE\") it was well under the 10 Meg limit.
AntMail worked great the first time I used it. After that once I download my mail the listing of messages is garbled with ASCII characters. I've tried deleting IN.BOX and OUT.BOX and restarting the files via a text-editor, but that only gave me a bad path error. Also, leaving the program and coming back causes all of my settings (host, email address, etc.) to fill with garbled data.
Telnet works great (slow, but good) until the data reaches further than one screen. Then the screen advances, but nothing is shown on the screen. It's like the data is printing just fine, but in the background color (white). That continues throughout the use of the program.

Now I understand that these are only beta versions, but none of them fully work to be reliable net software. I've found myself switching my computer off in disgust every time I use them. Am I doing something wrong? Am I the only one who's having the problems or has someone else known/solved this already. Any help will be greatly appreciated, because I'm getting tired of using Communications software to dial up my net provider :)
To further help people know what's going on with my machine, I'm using a 1040 Ste with 2 Megs of Ram. I run Warp 9 with Tos Version 1.62. Free memory (according to Stik's Other Stuff button) is 1.1 something Megs.

Thanks in advance for any help. Please email me at garn9114@kutztown.edu rather than post here only because my limited schedule (with finals week) doesn't allow me nearly as much time as I'd like to read and help others.

David

Why won't _you_ make the case to Zetnet that they should waive the
startup fee (and I mean for anyone and everyone whether poached or
initial customer)?

It strikes me that the only way I can find out if Zetnet is any good
is by giving them thirty odd quid. This could be taken as an indicator
of the quality (or lack of quality) to expect by someone more
sceptical than myself. I have to be careful here because I have a
tendency to shout at people who complain about something without any
direct knowledge of it <g>

I recommend a free trial startup period of one month. No startup fees.
If compuserve can do it so can Zetnet. The only question is: will
their systems be up to the influx of new customers?

Best wishes

Neil

Message-ID: <ftn_2.200.136.5$fidonet.org_bf2871ce_Claes.Holmerup@p5.dada.ct.se>
Source record: 145302

FPINTO wrote this to All about FALCON/AUDIO-IN/VOLTAGE.:
F> Is there any voltage in your Falcon-audio input? Mine has
F> arond 9v and 4 Milliamps. (analog multimeter measured). Is it
F> right or not? The audio system seems to work fine.

Hi there,
That's the way the Falcon was designed for some strange reason...
Here's how you convert it to standard -10dB line in/out instead:

A T A R I F A L C O N 0 3 0

Hardware modifications for getting standard line levels in/out
(-10dB), instead of the original microphone in/headphone out.
These modifications are described in your Cubase Audio handbook
as well, but there is a slight change from that to get the true
line levels.

All the components are surface mounted resistors and capacitors,
so you should NOT do the modifications if you're not absolutely
certain that you are able to do it.

REMOVE THE BASSBOOST
Change C58, C59 from 100pF to 1000pF
Change R123, R130 from 10kohm to 15kohm
Change R59, R68 from 100kohm to 4.7kohm
Change C95, C90 from 0.033uF to 1kohm resistor

LOWER THE HEADPHONE AMPLIFIER'S GAIN
Put a 10kohm resistor between pin 2 of U21 (@ R119) and AGND
(@ R111).

LOWER THE INPUT AMPLIFICATION TO -10DB
(and remove the phantom power on the mic input)
Remove R56, R57, R90, R92, C21, C81
Change R66, R87 from 100kohm to 1.8kohm
Put a 470pF capacitor in parallel with R67, R88
Put a 100pF capacitor in parallel with R66, R87

Everything's ready for testing.

Good luck and best regards,

Claes Holmerup, service engineer at Micro Resource Data AB in Malmoe, Sweden
(as well as Cubase Audio Falcon user).

2706. Re: C-Lab Falcon?

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: claes.holmerup@p5.dada.ct.se
Message-ID: <ftn_2.200.136.5$fidonet.org_bf287365_Claes.Holmerup@p5.dada.ct.se>
Source record: 145303

Mark Friedman wrote this to All about C-Lab Falcon?:
MF> Has anyone used the C-Lab falcon, and, how is the audio
MF> quality? Could it really be the basis for a recording studio?

Hi there Mark,
I use an Atari Falcon in my recording studio and I'm very satisfied with it.
The difference between Atari's and C-lab's Falcons are the following:
Microphone in/headphone out have been changed to line in/out.
The output OP-amps have been changed to amps with a lower noise level.
The CPU-clock modification has been made at the factory and all of the C-lab
Falcons have been tested for proper function with Cubase Audio (which was a
problem with some of the early Atari Falcons).
These are all the changes that have been done by C-lab so far.
However, if you want to use it professionally, you should'nt use the built-in
A/D-D/A converters, but on the input either JAM-IN2 (which has 1-bit A/D
converters/18-bit resolution and accepts +4dB signal levels and has an
A-weighted s/n level of >90dB) or a DAT combined with an S/Pdif (FDI)
interface. On the output you should use a JAM8, which gives you 8 separate
balanced outputs with 1-bit D/A converters with 18-bit resolution. The JAM8 in
unbalanced mode has a +4dB output, but in balanced mode it's even better and
with a s/n level of 93dB A-weighted it's really great!
The JAM-boxes both have a completely flat frequency response from 10Hz-22kHz
+-0.1dB and a harmonic distortion of 0.005%.
For the moment I still use an FA-8 for the output, but I'm going to change it
to a JAM8 within a few weeks.
I've been using the Falcon in my studio for about a year and a half, so I guess
you can ask me just about anything if you need to know more...

Best regards,

Claes

Sounds like a reasonable way to go. Too bad we don't live in a
perfect world, and everything would work together in whatever
available ram one had! :)

On the other hand, competition is good - with two Internet packages
being developed, we users get more choices & better options. I hope
there is enough support to keep both packages going, and that the
endless questions from us don't get the developers down! :)

So, now for my questions --- naw, just kidding. I plan to get a
personal account in about 2 months after planting, and I hope one or
both packages will offer me the tools I need at that time.

Great to see a new TCP/IP prog available for the Atari!

I've set it up as best as I can but the whole thing locks when dialing.

I'm using a 4 Meg STe, TOS 1.62, HSModem6 and a 38400 hack on the serial port.

I've noticed that if the phone rings Oasis seems to unlock itself but then of course the ATDTxxx just answers the phone, it doesn't ring my provider. :(

It sure looks promising though!

The older Toshiba drives had a parity enable (or was it disable?) jumper on the inside. Open up the case and see if there is one labled PE or something like that. If there is no jumper add one, if there is one remove it.

(Sorry I can't be more specific - I don't have my Toshiba handy to look at. - I just know that I had to disable parity so that it would work with my Link I.)

Hi!

I'm willing to buy Cubase 3.01. I'm in quite a hurry -- actually I'd need it today, as I've got to transfer some songs to it before friday... But as I probably can't get it in time anyway, please send me offers even from longer distances.

Now this is a little bit criminal but; if you've got a *working* pirate copy of Cubase, and would like to help me, please send me ZIPs or MSAs or whatever of the disks -- I REALLY only need the copy for the next weekend, and I'm going to buy the original as soon as possible, but my band should play on friday so...

Thanks a lot!

- Jyri

Source record: 145312

Morning!

>I'm looking for buying a 1GB Iomega JAZ drive which I want to connect to
>my 1040ST as well as different PCs. I've got an ICD hostadapter with
>105MB Quantum SCSI harddrive and SCSI Tools 2.12.

The ICD hostadapter will most possibly be able to handle the JAZ drive. Test if you have too old a hostadaptor by setting Jumper EP on the Quantum drive for a test. If the drive is no longer found after bootup, your ICD doesn't generate a parity bit and thus won't handle the ZIP or JAZ. No harm will be done to your data; if the drive is found with EP on, leave it on, otherwise, remove it (all setting and removing of jumpers in power-off state, please) and everything will be back to normal.

You should update your SCSI-Tool, though. Current version is 6.50, and as I just read, a forthcoming version will also tear down the 1 GB barrier on ICD adaptors and compatibles.

bye, Peter

I tried T-Cache and it mushed one of my drives also... I think it
messed up the FATS or something. I never realised what it was that
cause the problem, other than T-Cache, and so just wiped it and have
lived quite weel without it since !

I believe that he meant that the laborious gaps of time one must wait for
such a slow modem to wake up from a thousand year sleep and do something
is what makes it "quite unpleasant".

And if TinyLimp would give up a few more details about how Widows is
implemented, you'd find just as many patches and refinements there, too.

However, that said, there are a number of replacement desktops for Widows
(Norton Desktop, is one, or so I am led to believe). ANd probably a lot
more patchware is available as PD/SHareware.

Title on TXT file:
"Optional hardware change to increase CPU write access speed"
The wire is from the FX Controler to U63 pin 19. Nothing would work
above 20/40.

> > Another thing, this last weekend I tried to install the lastest FX Software.
> >Nothing worked, couldn't even boot at 16MHz. Fought with it for over 3 hours and
>
> Release (1.9) have some Bugs..

Yes, the author of FX admitted that 1.90 slipped out. He is working on
ver 1.91. ('Ship happens' was his remark if I remember correctly.)

> >Seagate Barracuda, ST12550N, 2.1Gig Hard Drive.

>>>>
Oops, I didn't mean to confuse you. I DO NOT have a problem with the
SCSI port on my FX Falcon. This particular Seagate Barracude has a problem if I
try to use the 'On Board' Terminators. I have 3 others, all that have worked perfectly
on my Falcon. If I use an External Terminator or another drive at the end of the SCSI
chain, it works perfectly. I was 'Playing' with it trying to see how big of a partition I
could format it to and then tried a few other programs on it. Diamond Edge failed.
I actually got: P0=33.54; P1=536.86; P2=536.86; P3=536.86; P4=495.46 MByte.
Five partitions under ICD Pro Utilities. I kept the 1st one small to keep the sector
cluster size small if I was to use it as a BOOT drive.
This 2.1Gig HD was on top of the 85Meg IDE and 540Meg SCSI already
installed. Caused Daimond Edge Total Sector Sizes to go into Negative numbers.
Tried to EMail them but the mail bounced back. Snail Mail next.
Yes, my FX is working wonderfully, in any speed I want to set it but I
Boot and run in the 40/40 mode all the time. CAB works great with it. With RAM

prices going so low - - - 14Meg ST RAM, soon.

I hope I've cleared up everything; Rich Mier

> mount it upright at the end of the FX card nearest the hard drive and
> blow towards the cartridge port?
>
>>>>
Quote from one of the TXT files that come with the FX board:
"Remove the Falcons fan from the original position (which is quite a
useless one) and move it between ROM-port and STE-joystickports, so that
it can blow below the FX thereby optimally cooling the CPU. The necessary
+12V can be found at the right connection of C110 above the right foot
of the power supply. There you can solder the red wire of the fan.
The black wire can be soldered to the border of the mainboard." Unquote.
The TXT files are buried inside a couple subdirectories, I didn't
find them until I had my FX up and running.

Even though there appears to be nothing in the directory, you can still do
a "get oasis2.tos" and you will retrieve the file. Honestly.

: I'd read something about it swaps one line somewhere, but if I extend
: the same signal from the TT to the keyboard, it should still swap that
: one wire or whatever it was that was different.

I would use the existing connectors supplied with the TT keyboard and use a multimeter to decipher the pinout from one end to the other. I would then buy an appropriate length of cable (12 core or similar) and rewire it myself to ensure that the pinout remains the same. I don't think the cable supplied would have the same pinout as an RJ11 or similar telephone connector (I could be wrong :-))...

If you want to buy a telephone cable, test the one you want next to the TT cable to be certain your pinouts are the same, and that the connectors are the same type...

2725. Oasis2 help me please,please

Newsgroup: comp.sys.atari.st
Date: 1996-05-12 00:00:00 UTC
From: clinton@teleport.com
Message-ID: <4n3snr$npd@nadine.teleport.com>
Source record: 145401

Okay; I tried to run Oasis 1.whatever without much success. I keep stalling out after the allocation of my dynamic IP address; Since I was already hearing of the pending release of Oasis2 I figures I'll waits.
Well; today I spent a fair amount to time with Oasis2 to encounter the same problem over and over and over again. I am left perplexed and in need of the "kindness of strangers".

This is my dial script:

```
$! DIAL START
'
' teleport
'
0:DIAL_TIME = 30
'
0:CONNECT_TIME = 60
'
0:PHONE = 2201016
'
0:PACKET_CLEAR = OFF
'
0:r-login:
0:s-my username
'
0:r-password:
0:s-MY PASSWORD
'
0:r-IP address:
0:s-$GET_IP
'
0:r-HELLO
0:s-
'
$! END DIAL
```

It (Oasis2) just sits there after my ISP (teleport) sends the dynamic IP address.
Anyway if anyone who has taken the time to read this, has any idea why this script dosen't seem to work would convey those thoughts to me. I'd be grateful.

Mike,

All you need to extend your TT keyboard cable is a female by female 6 pin connector (RJ11) and an RJ11 extension cord. You should be able to get that at Radio Shack, etc. Or if you really want some cheap ones, Computer Gate (see Computer Shopper magazine) has the adapter for about a buck, and the cable for 49 cents or so.

2728. Re: Need TT Keyboard cable Info....,

>: I'd read something about it swaps one line somewhere, but if I extend
>: the same signal from the TT to the keyboard, it should still swap that
>: one wire or whatever it was that was different.

As I said before, use an RJ11 connector and extension cord to extend your
TT keyboard.

But if you want to know the pinouts, pins 5 & 6 are to ground (through the
line filter on the motherboard .. for that matter, all lines go through
that line filter). Pins 1&2 go to the 5 volt source (again through the line
filter). Pin 3 goes to the TxD (pin 6) on U301 and Pin 4 goes to RxD (pin 2)
on U301 (again through the line filter first). The line filter (L307) has the
following in/out connections ...
RJ12 L307 In L307 Out
1 & 2 5 1
3 6 2
4 7 3
5 & 6 8 4

Pins 1 & 2 go to a fused (F31) connection to the motherboard

I wouldn't worry about any of the above stuff. Just get either an RJ11
extension (male x female) or get the more standard RJ11 cord (two male
connectors) and a female x female adapter. RJ11 is a 6 wire phone line
connector. I have my Mega ST and TT keyboards all running on extension
cords.

> I'm planning to use this stuff with Linux
>
>
>>>>
Do I really want to do this? Well, I'll take a shot.
You need a 'Normal' External modem, 28.8K will work just fine
IF you use HSMOD6 software to fix the serial port. The Falcon serial
port will go to 115K. The 'Socket' is a standard DB9 connector and you
will need a standard DB9 to DB25 Modem cable to connect to your new
modem.
If you are planning on using Linux, get the 28.8K modem. I've
used one on my FALCON for almost a year. (TOS 4.04, STalker and
HSMOD6.)
A note here: DO NOT buy the cheap 'WIN Modems' appearing
on the store shelves. Much hardware is left out and is put into software
that you can't use on a Atari. Hell, I won't even recommend one for
Anyone.
Hope this helps; Rich Mier

Try All Electronics Corp, 905 S. Vermont Ave, Los Angeles, CA.
90006. Internet: WWW.allcorp.com. 800-826-5432
What you want is "CAT # SCSI-1", $19.95, 2 for $36.00. They
are complete cases to handle a single 5.25, half height drive, power supply,
fan, dual SCSI connectors. The only thing they are missing is the external
ID select switch but there is an empty hole in the back for it.
I've used them to set up 2 SCSI hard dirves for other people and
use one for my CD. Oh yes, there is room in the bottom, under the HD, to
mount a ICD AdSCSI controler. It's a little tricky getting the ASCI cable in
but it can be done. On one I used a SUPRA controler mounted inside on
the bottom.

Bummer. However, I don't give up that easily! :^) What form did your copy take? (What media? What came with it?) Did it come with source code? (Probably not!) I'm just wondering if there's any way it could be made to run on a Falcon. Failing that, does anybody want to try it on the new Hades machine? :^)

I had this earlier.

OK, in your ICE NET init line, it's probably something short like ATl0
make it something longer like:
ATl00m3

keep making longer til it works.

Seems to cure it.

Cheers

Yours etc.

Hi,

After installing and configuring Oasis and Ice with Ice_net, the
following msg appears when running the new Oasis:

"Internal Clock not detected
Please set and restart Oasis"

On our ST 1040 STf there is no built in clock (besides the system clock,
of course). What does this mysterious error mean?

(Oh, forgot: when we install and run a clock prg, for instance SEDATIM.PRG,
Oasis craches with TOS error # 38; only reset helps)

: > format and the file-names, but not the text files.

: I don't think, that there is a possibiolitz for that. Since Winword is
: not able to use the Signum fonts, and signum won't use any true types or
: Type1 Fonts you would have to convert the fonts first. Therefor you need
: an autotracer for the pixel fonts. Then you need to read the signum file
: somehow and konvert it to something that winword can read.

Alternatively, you could save the file as ASCII from Signum 2 (or later?)
and load it in as ASCII to your Windoze package. I have had a look at the
Signum file format and now have a vague understanding of it (almost enough
to write a convertor for the basic stuff). If someone knows the file format
of WordPerfect or any other PC word processor I'll have a bash at writing a
convertor.

Mickey Boyd (boyd@zeno.math.fsu.edu) wrote:
: I would like to be able to plug my Atari STE and 1040STFM into the video
: jacks on the front of my VCR. Alternately, I would like to plug them into
: an SVIDEO jack, if possible. Doing so directly from the "TV" jack on the
: computers to the video jack on VCR did not work. I presume I need some sort
: of RF modulator that is fancier than the one I got with the computer (the
: little silver box that used to come with lots of Atari stuff, including the
: 2600 line).

I don't know whether NTSC affects this but I seem to remember that the composite sync pin on the monitor socket (pin 2?) is actually composite video on any machine with a modulator built in (ie not Mega ST, 1040STF, 520ST or a few others) If you connect that pin to the inner pin of the RCA phono video in, and pin 13 (ground) to the outer, you should have a composite video output. To add audio as well, connect another phono jack between the audio pin (can't remember the pin number off hand) and pin 13 (still ground). Alternatively on the STE, you can connect it to the audio outputs.

I will not guarantee this will work and can not be held responsible if it doesn't, but you can have a go at your own risk.

Dave

>between the languages, so all of us can derive use from software, &
>of course pay our fair share for it. Unfortunately, from several of
>the messages here, it seems this is not to be. :(

That's the sad thing about it all (no pun intended). An excellent program which should be in use everywhere has been used as a political football by people knocking each other. With a new author (Thomas Binder) for Thing, let's hope development is speeded up.

One good thing (oh not again!) to come out of all this is that there is quite a lot of agreement between people on various continents over certain aspects of shareware etc. Amongst the rudeness, there is at least some hope. :-)

Hello,

the best way I found to translate the signum files in pc filesmas:
-in signum, save all graphics into separate files, in a format readable on a pc (use gemview for translation)

-create a macro to replace all caracters with accents (many in french language) in this way (for example):
|e for ï¿½
||e for ï¿½
|||e for ï¿½, and the same for all caracters 'strange'

- save in ascii

in winworld, get the ascii file , make the reverse of the macro, and insert the graphics; It seems to be a bit long, but it works very well.

Alain-Pierre

2756. Oasis2/preliminary problems!

Newsgroup: comp.sys.atari.st
Date: 1996-05-13 00:00:00 UTC
From: dickie@mistral.co.uk
Message-ID: <831949668_OASIS_NEWS@mistral.co.uk>
Source record: 145314
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

So I have got Oasis2 safely from cnam.fr, and have got it up and running... well sort of. It looks like it is going to be very good , but here are my first few problem reports with the usual disclaimer that its probably my fault for not reading the instructions properly.
1) I dont have a host name, Im simply dickie@mistral.co.uk. I soon discovered that if I leave the host line blank, news does not send. My temporary solution is to give "mistral" as the entry in the host line and "co.uk" as the entry for domain. Now the news seems to send OK. it does not seem to be an ideal way of going about things though.
2) Under nos_pop3 and Oasis135, my mail simply arrived im my mailbox without problem. When I send test posts to myself with oasis 2 it says "mail for unknown user" when I retrieve it using pop3,and then I have to take the given option to file it. This is a hassle, and I cant seem to work out why this happens.
3) On my Falcon the screens seem to blank when I select windows sometimes. Clicking in the window seems to restore the text. I remember a lot of problems in the earlier Oasis with funny screen stuff. Is this more of the same for Early Oasis2?
4) When I log on the viewer always pops up saying bad checksum IP and I seem to be getting varios checksum reports going on, but nevertheless it seems to be getting here. It all looks a bit frantic though.
5) I tried ftp on hensa, and discovered that if I click on the left hand closer of the ftp directory screen, it disappears, and I cant seem to get it to come back even though ftp is still active. "Show ftp" only brings up another ftp log on screen. Also on the ftp directory window there were no file dates as there are in mgftp for instance, those dates are useful to see directories which have recently been updated, I have found.

Enough for now. Anybody got any ideas where Im going wrong, and any solutions... meanwhile
Well done Phil and Dave.. Im sure those updates are already in the pipeline.

Richard

> If there is a way, I for one would be very interested.

I seem to remember reading somewhere that Spectre GCR 3.1 did this, and that 3.1 was available. This would only be 7.0, though, because 7.1+ needs colour quickdraw. Colour quickdraw is only available in the bigger (256K?) ROMs which Spectre does not support, IIRC.

So, if I remember right, you need Spectre 3.1 to run System 7.0, and you cannot run 7.1+ at all. Apparently Dave Small is still developing Spectre in his spare time, but I wonder if it will ever see the light of day.

There is a DOS program that can fix ST boot sectors as well. See the file
ftp://atari.archive.umich.edu/Misc/st2dos10.zip.

```
STe with 4 megs memory, TOS 2.06.............$235
Same computer with only 2 megs...............$210
Upon request, will include older versions of UIS 3 (v3.30) and Warp 9
(v3.5), and Flash 1.6 with the STe at no extra charge. (I found it
cheaper to buy used copies of the newer versions than to upgrade). Also
will include Publishing Partner (ancestor of Pagestream) upon request.
-
AdSpeed STe.................................SOLD
-
SM124 monochrome monitor (in original box)....$35
SM124 if purchased with STe: $25
-
Practical Solutions Monitor Master switch.....SALE PENDING
-
NEW ADDITION TO THE LIST:
Replay IV sound digitizer cart (w/software)...$35
===============
-
COD buyers pay actual shipping charges + COD fee in addition to the
above prices.
-
Anyone prepaying gets free shipping and a 10% discount off the above
prices.
-
Any other offers will be considered, and if anyone has an Amiga 1200 they
aren't making use of they would like to trade for the above, let's talk.

2766. Problems with Oasis2

Newsgroup: comp.sys.atari.st
Date: 1996-05-13 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4n6hbo$abc@madeline.INS.CWRU.Edu>
Source record: 145324

I am afraid that rejoicing is too early in my case at least.
I have only been able to get it working slightly, and there are some
obvious problems, right away.
I was so proud of myself when I even got stik/cab 1.06
working almost right away. And have had no problems with it since.
WELL, almost none!
I am using a TT 4+4 with hsmodem installed, (although I tried it
without with no better luck). I have tried it on modem 2 and on
serial 2, with speeds from 150 (115200KB) down to 1200, including
38.4, 19.2, 9600, and 4800.
Only with 4800 have I had ANY success.
Symptoms:
1. At ANY speed other than 4800, and even then at times random,
It gets as far as "CONNECT XXXX" (with XXXX the particular speed)
and croaks. I am dialing into a static SLIP acct at CWRU.
(thank god it's free, with all the time I have spent today).
2. At 4800, I sometimes login OK, but thats as far as I get.
If anything fails, or I hit the spacebar to disconnect, it
does a retry, but ALWAYS stops at "CONNECT", even at 4800.
3. The above applies if i□I am using ICE, Oasis NEVER gets beyond
"connect".
4. when it does connect, it is obvious that it is sending
out shit before it is asked, since on the dialer screen I can
see my id (Username) AND password before it asks for them!I□
5. If it dies for some reason like a timeout, the redial never works.
6. IF it connects, and I try FTP, I have never gotten in anywhere.
True, I have only gotten in a few times, and the lines may have
been busy. However, I have my own VAX minicomputer on the network,
and I have tried logging into it, and I know it is not busy.
Unfortunately it a VMS (DEC) OS, not a Unix machine, and doesn't
recognize "/" for root. Yet the FTP selector doesn't allow
one to change the first /□"/" character in the directory chain.
7. I have a static slip acct, on the server, i.e. my IP is always
the same. (129.22.123.194). If I don't preassign the IP no.,
and try to use $GET_IP in the dialin script, it gets my IP as
22.123.194.0, and croaks, as it should with such an address.
It should get the IP from the dialog, just as if it
wasn't a static acct.
8. This MAY be because the packet sizes are wrong, and inconsistent
with the DOCS (YES, I did read them, thoroughly, before I started,
and several times after).
Ice-net.doc says clearly that " the packet sizes for SLIP are 512,
1024, and 1536. The packet sizes for PPP are 500,1000,1500"

I believe these are reversed. My server has a MPU of 1500
NOT 1536. The dialog in ice-net.prg has PPP512, PPP1024, and PPP1536.
as it should, but the speeds for SLIP are ALSO 512, 1024,and 1536.
9. Under Oasis, I could never get past the connect signal.
No not quite true, once I got in at (I THINK?) 1200, but screwed up
somewhere else and could never get it to go again.
10 Once I have tried and failed, even at 4800, I must reboot
totally before it will work again.
11. FTP has to work on all kinds of machines, not just Unixes.
The VAX has a different directory format, as does the MAC and
a few other machines. In the source code for LYNX, in the
unit for FTP logins, about 6 or seven different formats are
invokeable.

P.S. This newsserver wont allow me to make a copy of this letter.
And I don't feel like two-fingering it again. If someone could please
send a copy of it to the authors, I would be indebted.

PPS. This letter is not, i repeat NOT, a slur on the excellent
efforts of the creators. I just got a little tired of the myriad
posts in csas speaking in glowing terms of how wonderful the
new OASIS 2 was going to be, that I was a little disheartened
when I saw the final result.
This points out the NEED to have many beta testers to
weed out all the bugs, and peculiarities of the many systems
their software will be exposed to.
Wasn't there a whole series of posts a month or so ago
about people wanting to beta test and couldn't? I for one feel
the registration fee AT THIS POINT is way too steep for a system
only works on some systems some of the time.
(Won't this start a few flames, if anyone reads this to
the bitter END?)

Degas Elite??? Wow, that's a blast from the past!! :) My favourite ST proggy, that was!!! IIRC It was sold though Electronic Arts. I doubt very much if they still sell it. Your best bet is to call a few Atari suppliers to see if they have copies floating about.

> Can someone give me any ideas on how to locate another copy? Failing
> that, are there any PD paint programs on the net that can use Degas
> pics? I know the latter is unlikely but I figure it's worth a try.

Well, other than Degas Atari's paint package called NeoChrome was quite popular - and it was PD. *BUT* I remember Atari did everybody a favour and asserted their copyright on it and it was removed from most PD libraries, but if you're lucky it could be on an FTP site somewhere :)

Another option is "Crack Art" - This was better than NeoChrome in my opinion. It was shareware, and the unregistered version had no restrictions. You should be able to find this freely.

Both can import Degas Elite pictures (I *THINK*)

> Anyway, thanks...

If you have any probs finding the stuff, let me know - I have Crack Art floating around somewhere at home and if you're *DESPERATE* for Degas Elite then I do have a copy of that too, which I don't use anymore now I have a Falcon. Both are at home in England though and as I'm in Germany it means calling my mum and getting her to search for them!!!!! :)

There is no such thing as Spectre 3.1 available to the public, 3.0 was
the last one released. System 7 will NOT run on Spectre GCR even though
it will run on a real Mac Plus just fine, if a bit slow. System 7.1 works
fine on my Plus and only uses 1500-1700k of memory.

From: sl471sa@e45-hrze.uni-duisburg.de
Message-ID: <4n79ss$h3i@h20-hrze.uni-duisburg.de>
Source record: 145337

Email:sablewski@uni-duisburg.de

I have the problem with CAB that the proxyserver I have to use cannot ask me for username and password. (I have to use the proxyserver "www.uni-duisburg.de") Using Netscape on PC I get a window to enter username + password. My Atari does not ask me, so I get everytime a document with a message "not authorized to read document".

The slip-connection with STIK seems to be ok. I can read the homepage of the "www.uni-duisburg.de" which does not require username and password.

Is there any solution for that problem? Is there anything wrong in my setup?

please reply via Email!

#>[...]
#> Is there any solution of deleting that ****ing animal ?
Yes, run a virus checker and check all your disks. "Carpe Diem" not only installs a hidden ~.prg in your auto-folder, it also installs boot sectors on all disks which re-install the ~.prg file (and the virus, of course). The virus itself doesn't do any harm (except that annoying rubbish printed out, which I consider being not what the author planned as the virus effect) and is quite conventional (except that new(?) idea with an auto-folder program).

So, simply check all your discs you've used since you encountered Carpe Diem for an unknown boot sector and cure them, if necessary.

Ciao

Thomas

But he hasn't limited the distribution! Just the people who can use it. I
can read german fairly well (enough to use Thing...), but I'm in the UK.
By saying that it should be removed from all non-german FTP sites is silly
- why should I (as a german reader [I'm not very good at speaking it]) have
to go to a german FTP site to download it? In that case, should all the
software on ftp.cnam.fr that is not written in french be deleted? No.
Should all the german/french software on Hensa be deleted? No.

Electronic Arts.

They dont make it anymore, but you may be able to get it second hand...

>Can someone give me any ideas on how to locate another copy? Failing
>that, are there any PD paint programs on the net that can use Degas
>pics? I know the latter is unlikely but I figure it's worth a try.

Yes, there are lots! (degas/degas elite files are easy to code...)

Try crack art - IIRC. That had PI?/PC? compatability...

Anthony

2785. Lost serial no. for Superbase 2

Newsgroup: comp.sys.atari.st
Date: 1996-05-13 00:00:00 UTC
From: L.L.Robinson@Aeromech.salford.ac.uk
Message-ID: <4n7skf$7b0_001@salford.ac.uk>
Source record: 145343

Please help, I have a friend who has had Superbase 2 for a while but
now has forgotton what his serial number is so he can't use it. he has
tried to call the company where he got it from but they are no longer
trading, is there anyway I can find out the number by using Knife ST?
or is the program gone for good
If it has my friend want's to know if there is a database that
runs as an ACC he can get for shareware.?
BTW I had an excellent responce for the Forget me clock II,
It's working absoulutly brill now Ta!

From: Paul Coene <Paul.Coene@esat.kuleuven.ac.be>
Message-ID: <3197491E.2BBD@esat.kuleuven.ac.be>
Source record: 145344

Will a normal modem fit on the Falcon modem port? I'm thinking
of buying a 14.4k modem for my puter and try to make a SLIP
connection to my university for internet access. Can I use
a normal PC type modem for that? The socket looked a bit strange,
it's more like a joystick connection. Has anyone had success
with what I'm trying to do and some tips?
Also does it make sense to buy a 28.8k modem? The net never seems
to be faster than ~1K/sec anyway. Maybe the serial port is not
fast enough for 28.8k transfer...
I'm planning to use this stuff with Linux

Regards,

Paul

I had some problems with my falconspeed with hard drives as well. The problem occured when I tried using SCSI partitions after I booted dos from the IDE drive. There is a program which needs to be run by your autoexec.bat file to give the extra partitions this orogram is on your falcon speed disk. BTW which version of the software are you using. The software went through three revisions in about the first six months the falcon speed was available.

Also: Does anybody out there have nay idea who is supporting the falcon speed board now that compo has gone. And is there a file trasfer point with the current drivers. (I just sold my falcon speed to a fellow in spokane it would be nice if I could send him the best version of the driver software.)

2788. 1040STFM 60MB HD Problem

Message-ID: <jean-luc.thill-1305961710100001@slip11.restena.lu>
Source record: 145346

HELP! I have an 60 MB HD on an Atari 1040 STFM. I sold it to a friend and now it won't work anymore. When the HD is on the computer tries to boot from it, this fails and the floppy disk is not addressable (due to the mounted HD). Flipping the procedure doesn't work either. Even with a Ramdisk it fails to adress the HD. It worked fine till that day and my friend did everything I told him. The HD was shipped before he carried the item home. Can anybody help me.

Pleas e-mail

TIA

2789. Re: Looking for HP540c driver or similar..

>that if there's no printer driver for the HP540. I'd appreciate any clue
>as to where I can find it.

What you may want to know is that from the model 500 through the most recent model 600 series (600/660) the color graphics resolutions never changed (300 dpi). Not until the 600 series was there slight enhancements to the PCL command set for directing the printers on how to print certain specific sequences. This is why a model 500/500C/520/540/550/550c/560... printer will still function correctly with the older 500/500C printer drivers from Calamus or Pagestream or SpeedoGDOS or whatever. (By the way, I only stopped at the 560 for convenience of typing, I could easily have continued with the 600/660/600CSe/660CSe/680/850/855 printer line from Hewlett Packard.)

Only color black printing starting from the following models, 600/660/850, print at a resolution of 600 dpi maximum depending upon your software driver's capability to differentiate.

I hope this clarifies some things. Just because you have an older print driver does not necessarily mean you aren't getting "more bang for the buck". The single biggest advantage that most people are not talking about with the newer models (600 series on up) is that you now have paper (media) handling capabilities that you did not have before. The earlier models could not deal reliably with heavier guage papers for business cards as an example. While you still can't use media wider than 8.5", you can now use transparencies and envelopes that you couldn't deal with before.

Good luck and may the good news be yours.

2790. GCR/Spectre3.0/System7

Newsgroup: comp.sys.atari.st
Date: 1996-05-13 00:00:00 UTC
From: nicole@seas.smu.edu
Message-ID: <4n7k8l$hku@giant.seas.smu.edu>
Source record: 145348

The problems of running Sys 7 on a Plus or SE is pretty much limited space, though there is also some problem finding Sys 7 on 800k disks.

The problem of running Sys 7 on ST with GCR is not only the limited space (4megs of memory), but also that the Macintosh program bits have to be translated by the Spectre software to work with the Atari hardware. Spectre 3.0 software translates most possible commands up to System 6.5. I ran 6.8, but it had some problems. 7.0 is rewritten almost from the ground up. There are many shareware fixes that give 6.5 some of the desirable features of System 7, such as aliases to sit on the desktop (a la TOS 2.06) for ease of running your most used from the desktop. Anything that requires System 7 on the Mac still won't run on the ST with GCR. YOu might also run into trouble with newer programs that require the 68030 or higher chip if your ST isn't upgraded. Unlike newer Atari ST programs and versions of TOS on Atari, many, I might even say most, new
programs won't run on the older system software. At least that's true of anything multimedioid which uses sound or quicktime, and it seems to a cranky frugal poor person like myself, everything uses these gimmicks these days. Even with
system 7 on my wife's older SE (not 68030, but 68000), these things don't run.

On the other hand, lots of older yet very nice Mac software is now very, very cheap and runs perfectly well on the ST with GCR&Spectre. At the used software store here, I've bought older versions of Quarkexpress, Adobephotoshop, Excel, and other things for $8-10 each. Programs that cost hundreds of dollars new and are easier to work with on my 14"atari screen than on my wife's 9"Mac screen.

Le t me see if I can pull of a nutshell:

ST with GCR and Spectre software v.3.0 runs rings around a Mac Plus running System 6.5. Faster, larger screen, access to 720k ibm disks when in mac mode.

Plus barely runs System 7, while ST won't run it at all.

An ST with 68030 would be like a plus that's been upgraded the same way. Speed improvements, but still no system software upgrade; that awaits Dave Small's leisure, which, since macs have gotten cheaper and Ataris have not grown marketwise, would be an act of philanthropy and and intellectual exercise, but probably not good business.

Hope this helps. If you hear anything different, I'd love to be clued in.

>"TV" jack on the computers to the video jack on VCR did not work.

Similar problem with computers and VCRs can crop up here in the UK.
Appently it's down to both transmitting on the same channel or
something. All I had to do was fiddle around at the back of the VCR
and change its channel to something else then retune the TV.

Paddleports Falcon Fan

I can't found smal Fans for a upright mounting.
(Keyboard will not go back in the right position)
I fix my Fan with a simple Rubberstripe in this Position.

Otherhands, right, your Fan can make this Job by blowing towards the cardridge
port, i think you have the same result.

From: richardw@dma.org
Message-ID: <4n7r2p$mb0@sally.dma.org>
Source record: 145353

Hi!

I would like to know about something. I have an Atari MegaFile 30 along with two SCSI hard drives of the same size (both are Conner 100meg ones). I had the MegaFile as ID #0 (boot one) and #4 and #5 respectivly on the two hard drives. Now I can't get any of them to load. I already had everything on either floppy or CD Rom for my STe so the loss was no biggie. I made sure on the connections and they were firmly in place but no response. I tried to reformat my Megafile with the Atari Advanced Hard Disk Utilities disk that came with it and it won't format it!

HELP!!!!!!! I hate this thing from crashing. Is there something I can do? If I have to get new hard drives let me know too, I do understand if that is an option (one I prefer not to take), or should I just go and pay the $90 and get a Link II plug (I have the first one).

Right !!
I really don't understand this discussion if everyone who is against the wish of the author not to release an english translation of the resource really wants to pay for the software. Because if you paid you would receive it directly from an AUTHORized source.
Sure, this limitation is not driving the distribution of THING in non german speaking countries because those people cannot fully test the shareware version. But it is the right of the author to distribute programs that are not PD or GNU as he likes it - those who don't agree must not buy them (and may not use). And maybe the author will soon recognize that he is loosing more than wining.
But until then those who act against the author's wish seem to me like the ones using fully commercial programs without paying for them.

BTW I am NOT using THING (but GEMINI) and not connected to the author.

I had got this game a few years ago and I have finished it.

If you want to find your way in the caverns you have to get a 'COLD
head' which belong to the canibals and ask it your way.

If you don't have it, give them something else (something you have
since the end of the first part of the game) and they will give it to
you. This head will help you more later look, at it in detail !

2802. NEW FALCON (US) FS! $365 OBO!

Newsgroup: comp.sys.atari.st
Date: 1996-05-14 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <5bFshcw.johnhechtman@delphi.com>
Source record: 145187

***** NEW FALCON FOR SALE! $365! *****
.
Well, it's like this - I lucked out and got one of the 6 US Falcons
from the Atari factory sale. Then, _one day_ after I got it, a local
(to me) Falcon owner put his Wizztronics case equipped Falcon for sale
at a price I just couldn't turn down (grin).
.
I _was_ going to build the factory bird into a Wizztronics case, but
now that I don't have to, I want to sell the factory unit to help pay for
my new rack mount Falcon and the fixes and upgrades I need to do to it.
.
The factory Falcon is a new machine and has TOS 4.04, but does _not_
have an internal hard drive. It also comes with a mouse, owner's manual,
a mounting kit for an internal hard drive and a Multi-TOS system disk.
I'll also toss in an AC cord - which did _not_ come with the unit.
.
I want $365 for the unit _plus_ shipping. If you think that's too
high make me a (realistic) offer. But beware, if no one comes up with
a reasonable bid, I'll just delegate the unit to a dedicated sample
player/editor for my girlfriend's MIDI rig.
.
If interested, leave email for "johnhechtman@delphi.com" - or call me
at 212-586-4633 and leave a message - I'll get back to you ASAP!

Strange. Did you use the current (demo) version, i. e. 5.0?
Did you check if these bombs result from HDDRIVER or from a program in the AUTO
folder?

> on the new Hades machine? :^)

Believe me, it simply won't work. This Unix is much older than the Falcon. It
requires TT compatible SCSI hardware and TT compatible screen resolutions.
In my impression it also _requires_ a TT with Fast RAM starting on address
$01000000. This adress cannot be used for physical RAM on the Falcon at all.
As you see the TT SVR4 requires hardware the Falcon doesn't have and is not
able to support at all.
Don't forget Unix is an operating system on its own, i. e. if you want to run
it on a different machine than the one it was designed for you have to write
lots of drivers etc.
BTW, the sources for the Atari SVR4 are not available, of course. UniSoft, AT&T
and Motorala have the copyright for them.

2809. Oasis2 Impressions/depressions

Newsgroup: comp.sys.atari.st
Date: 1996-05-14 00:00:00 UTC
From: dickie@mistral.co.uk
Message-ID: <832164920_OASIS_@mistral.co.uk>
Source record: 145194

Having spent a large part of last evening and the evening before trying to get Oasis2 up and running in a reliable fashion, changing this, and then that setting in ICENET, I have admitted defeat and returned to Oasis135 for the time being. I had hoped that with all the beta test reports there have been for so long that the path would be a lot smoother, but for me at least it has not been. POP3 works but chokes on certain mails, where NOS_pop3 has no problems. The same seems to happen with certain newsitems. I had big problems getting news to send, discovering that because my address has no host name, Oasis2 gives a bad header if the host line is left blank.
Overall it looks very good. I am really looking forward to the updates when all the problems I have will be solved, but for the moment my registration fee, which I had been ready to send (had all been well), will have to wait. When this becomes a reliable system, with Spider working it is going to be a great program I believe, and all credit to the writers who have taken on a difficult job. Unless I'm getting things really wrong somewhere, it seems that the beta-testing has not been thorough enough though.
Has anybody out there, who has an address without a host part, who uses POP3, managed to get things going perfectly. Tips would be appreciated.
Richard

Source record: 145197

Hi! I have 3 older but Very workable HD's
1-Seagate ST-251N 5-1/2" 40 MB drive
2-Seagate ST-175 3-1/2" 45 MB
They are all in excellent working condition. I just swapped them
out for some higher capacity HD's. I would like to swap them
for a GOOD SF 314 DS external floppy, and/or
a GCR cartridge in good shape. Anyone interested?
E-mail me at

bdc2@po.cwru.edu

They are all three in perfect working order, but have NO
case or power supply. All 3 were taken from a working system
and are still formatted with old software, not worth too much,
in them.

That was the main reason I bought an ICD ADSCSI+ instead of the Link or
LinkII when I got a hard drive. There are other solutions though. Toad
((800)448-8623 or (410)544-6943) sells a cartrage clock for $29US.

Hi,

I've just bought a used TT w/o monitor. I plan to buy a really good one
but right now I can't afford it. But I still have a couple of old SM124s.
Is there a way to connect it to the TT without blowing the whole thing
up? (Right now there's a Crazy Dots 15 graphic card inside, do I have to
throw it out in case the thing with the SM124 works?)

Thanx alot

Guido

The last Email I recieved from St�phane Lesage was from "slesage@s1.asi.fr" something like a month or two ago... AFAIK, the development of MegaPlayer is stopped (too much work at school) but he surely has registred MegaPlayers for you... It's very nice with the Spectrum Analyser, also in 'iconified state'... And if I remember well the unregistred version cannot load some modules. The registred one has no restrictions, all types of modules will load, and there is no more limits with (very) big modules. I have one 2.1 Mo DTM, plays perfectly! AFAIK his home snail mail address has not changed.

2816. HP DJ600 Control

Newsgroup: comp.sys.atari.st
Date: 1996-05-14 00:00:00 UTC
From: Ali@land.demon.co.uk
Message-ID: <832149324_OASIS_@land.demon.co.uk>
Source record: 145201

Hi all,

Can anyone help me?

I recently bought an HP DJ600 printer which is replacing a Breeze 200 inkjet (DJ500 clone) which died :-(

I use 1st Word Plus and Timeworks 2 and the old printer worked well with both of these. I'm having a problem getting the new printer to print on the last inch and a quarter of the page. I find the same problem using both pieces of software. Whilst I can allow a larger margin at the foot of a WP page, which is a little inconvenient but not disastrous, I find that printing in landscape to produce A5 pamphlets DTP, the text is sheared off. According to the printer's specs it should print to half an inch from the foot of the page.

The 600 uses software configuration from a desktop menu, the old printer had its own set-up mode and could be configured from its `buttons'. How can I configure the 600 so that its print area is extended? I'm using a 4 Meg STE TOS1.06

Any help with this would be greatly appreciated.

Ali.

Source record: 145205

Hold the front page.....I think we're making progress!

I turned the OUTLINE.APP and DRIVER.APP into .ACC and now they both come up fine when called as an accessory. In the former I get a list of fonts and a whole bunch of other stuff, and with the latter a list of Printers.

I've tried installing ALL, but whilst it seems to do something, I can't see any changes! Am I supposed to? How do I get to use all these lovelty fonts?

Thanks!

>>
d> I can't fault their service in any way.
d> And to be perfectly honest, for a 1st sign up, I don't consider the fee
d> to be too much. Come on - look at the monthly price for goodness sake!
d> :)

I can understand Neil's pov because if you've got a CIX account already I
don't think there's a setup charge for an IP connection, you get local access
for telnetting to CIX and quite a small increase in monthly charges for the
combined service (an extra 8.25 IIRC) as long as you stay within the monthly
minimums - and only 1p a minute thereafter anyway... I'd certainly be
keeping my CIX account whatever ISP I joined, so these are the costs I'd be
comparing.

However, as you say, it's quite a standard deal for a first sign up. If
youwant to have a giggle about setup fees take a look at Pipex... !!

Guido,

You can NOT use the SM124 on a TT/030. You need a VGA or SVGA Monitor
for color (Will work best with your graphics card) or a TT194/195 TT
HIGH RES. monitor.

Hope this helps,

Jim Fouch

To: all
Subject: SOFT PC driver
Newsgroups: comp.sys.atari.st

I'm interested in getting the SOFT PC program from my Compo
Power CD running on my Falcon, but there's one hitch - on the CD,
the necessary hard drive emulator file (C_DRIVER.HDF) is missing,
and I can't find it anywhere on the CD-ROM.

If anybody can tell me where I can find a copy of this driver, I
would be most grateful.

2839. Initial Oasis 2 problems...

Newsgroup: comp.sys.atari.st
Date: 1996-05-14 00:00:00 UTC
From: floating pile of pestilence <chrishinds@delphi.com>
Message-ID: <ZdEuZDH.chrishinds@delphi.com>
Source record: 145224

Hello world--

Well, I've installed the long awaited Oasis 2 on my Falcon (TOS 4.04), and it looks like it has EVERYTHING I've been dreaming of. Just some bombing problems...

--The first time I tried loggin on, I got a 2-bomb error before the dialer even started.

--The two times I did manage to log on (after solving some modem problems), I got 2 bombs in the middle of each session. Both times it just seemed to happen out of the blue...I wasn't even doing anything.

--While reading news and right clicking, selecting "Show Tree" causes 2 bombs.

--There seem to be some display problems when reading news...e.g. I'd read an article, then close the window, and when I went to read the article again, the window came up blank, and I had to scroll around to redraw the text in order for it to show up.

That's been the problems so far. Anybody else having similar problems?...Can anyone help?

Thanks a bunch,
--chris

After changes are made, you have to reboot for them to take affect! Then
run a program that uses SpeedoGDOS and enjoy!

Systems For Tomorrow (1-800-875-4943) has some external SCSI mini-
towers complete with power supply for about $59.00 (US Dollars).
The cases will hold 4 SCSI drives.

>Seems to cure it.

Hmmm ... I've got that problem, too. :(But I can't find any "init line"
with something like ATlO in it.

I noticed that there is no way to define any serial port or modem port.
Thought that might cause the problem but it didn't work at modem 1 either.

Sorry guys - but I'm quite disappointed by the "new" oasis. The Spider -
the thing I was most excited of - is not included :((((And all the other
stuff mainly looks very similar to the old oasis. And the wonderful easy
setup throug ICE-NET doesn't seem that easy as promised.

And how does the shareware-lock work? Does it write any hidden data on my
HD so that oasis2 knows how long I'm using it? - I hate programs that do
wirte anything hidden on my HD without my knowledge and permission!

In my opinion so far it seems that there's no serious competition to
STiK/CAB, UPOINT, NOS etc.

Andreas

In article <832164920_OASIS_@mistral.co.uk>
dickie@mistral.co.uk (richard thomas) wrote:-

>that the beta-testing has not been thorough enough though.

I take exception to this Richard. I've posted bug lists regularly to
Dave, Phil, and the other beta testers, usually on 3-4 day increments.
A fair number of the bugs I have seen in 2.01 were not present in the
last beta versions, and bugs I have long reported have been fixed in
version 2.02 where Dave finally found the problems last night.

Take into account that there are not many testers, and we can only
test out certain servers.

I myself have tested Demon, Pipex, and am in the midst of testing
Cityscape out. I esitmate my calls have doubled as far as accessing
the internet is concerned, and I must spend at least 3-4 hours each
day trying to find fault with the latest beta copies and each bug is
listed immediately.

For major bugs a call is made to Phil or Dave immediately and is
usually fixed within 24 hours unless it is a real pain to find and
fix.

If you doubt the content and accuracy of the beta test reports I
produce then ask the other testers, they can verify the accuracy and
depth of the data given.

b> new OASIS 2 was going to be, that I was a little disheartened
b> when I saw the final result.
b> This points out the NEED to have many beta testers to
b> weed out all the bugs, and peculiarities of the many systems
b> their software will be exposed to.
b> Wasn't there a whole series of posts a month or so ago
b> about people wanting to beta test and couldn't? I for one feel
b> the registration fee AT THIS POINT is way too steep for a system
b> only works on some systems some of the time.
b> (Won't this start a few flames, if anyone reads this to
b> the bitter END?)
b>
b> Boris D. Cahan

Boris,

It is my belief, based on the setups provided with Oasis 2, that is was tested ONLY with Demon in the UK. There appears to have been no testing done with any other Internet Service Provider. Considering that Demon uses an account setup that is totally different to every account that I have ever seen in the USA, I should imagine that it's going to be fairly difficult to get Oasis 2 working with any ISP other than Demon. I know I haven't been able to yet.

jjtroup@dcsun4.comp.brad.ac.uk barked in U.COMP.SYS.ATARI.ST on 14 May 96:

>> j> ... (even if your Anti-Non-German-Speaking-Peoples conspiracy
>> j> theory ... _was_ true (which I don't believe it to be)...)
>> j>
j> I don't know what the problem with what I said is, if you feel I have
j> "attacked you on a personal level", please elaborate...

The phrase "conspiracy theory" is way out of line. I'm trying very hard right now not to respond with the anger that I feel, but in a reasoned and objective fashion.

Let me elaborate on my reasoning from the original thread a little while I'm here.

Firstly, at the time this thread was begun, there was no information that a shareware English version of Thing was to be available "Real Soon Now" (and since I'm working in a software development lab, I understand the meaning of that phrase all too well - it means "before the author dies, we hope").

Secondly, as a native-born American, I think I have a better understanding of the general level of linguistic training here than you do. In Europe, I know it is common to learn at least one other tongue in school. Here in the US, while foreign languages are available as electives, with the exception of certain parts of the country where Spanish is mandatory, most people NEVER study anything but English (and seldom learn that very well).

Lastly, you have picked out several parts of my side of this discussion and seized on them in an apparent effort to make me look ridiculous, by considering them out of context, or by expanding beyond my original intent in your replies. This discussion is DEFINITELY over from this side. You may continue it alone, if you like.

flori@stingbox.sb.sub.de barked in U.COMP.SYS.ATARI.ST on 14 May 96:

>> Bottom line: If an author says "don't translate my stuff," his wishes
>> should respected.
f>
f> Do you ever have seen such a line in any German software-package ?

No, that's just the gist of what others have reported. Arno has actually simply gotten someone to do the translation, but has not released English shareware version of Thing yet.

f> I had written some accesory-programs. Of course, I had written the
f> text-files and resources in German - just beacuse it was
f> intentionally for the German "market". I've never imagined, that my
f> programs are spread around the world via the net :-). And nobody
f> contacted me for a translation. Maybe this is the case for some of
f> the programs you have in mind. If you want a program to be translated
f> - contact the author.

That's the proper way to do it. I don't take issue with that - simply with the personal attacks (by people who aren't even connected to the author) that arose from one "unauthorized" translation.

f> There maybe are some right-wing "nazi" things going on in Germany,
f> but this is only a small minority (I hope !!), and I don't think,
f> that this "virus" has infected atari-programmers yet.

Sadly, there's some of that going on just about everywhere, but I doubt that software authors have enough _time_ to be bothered with it, even if they were the sort of knuckle-dragging baboon who _does_ get involved in extremist politics.

PC> of buying a 14.4k modem for my puter and try to make a SLIP
PC> connection to my university for internet access. Can I use
PC> a normal PC type modem for that? The socket looked a bit strange,
PC> it's more like a joystick connection. Has anyone had success
PC> with what I'm trying to do and some tips?

Paul, these days that _is_ a normal modem port. 9-pin Serial cables can be
had for US$5 and up.

PC> Also does it make sense to buy a 28.8k modem? The net never seems
PC> to be faster than ~1K/sec anyway. Maybe the serial port is not
PC> fast enough for 28.8k transfer...

Use Serial 2 (same socket, different software in the OS) and you can go to
at least 57600. Yes, get a 28.8k modem.

PC> I'm planning to use this stuff with Linux

Then you're on your own. <G>

```
**************************************************************************
**************** A L E X ' S B I G S T S A L E ***************
**************************************************************************

REPLY TO: alexc@3rdplanet.com

TERMS: This is my first big sale, but I have done twenty or so
net-deals in the past year, and these are the terms I have found
simplest and fairest:

Prepayment by cashier's check, money order or personal check
ONLY. Personal checks may take up to two weeks to clear, so
don't send them if you need anything soon. And, sorry, no CODs.

All prices are USA dollars.

Software prices *include shipping* in the continental United
States. (Regular parcel post [or Priority Mail for several
small items in one envelope]--I have had too many bad experiences
with UPS.)

You pay shipping on hardware.

All disks are original. All items include original
documentation unless otherwise noted.

-------------- T H E M A I N A T T R A C T I O N --------------

MagiCMac v. 1.2.5, Atari-compatible operating system for Macintoshes.
Original disk, manuals, "box" (really an envelope). Current price
from Toad Computers is $219--my price * $130 * including shipping.

------------------------ H A R D W A R E -------------------------

ITEM DESCRIPTION PRICE
-------------------------------------------------------------------
Atari 1040STf (upgraded) 4 Mb RAM, ICD AdSpeed 16 MHz $325
accelerator, Codehead TEC
board with TOS 2.06, and
internal fan--includes
original box, disks, mouse,
cables, all manuals except
those for RAM upgrade
ICD AdSCSI+ SCSI link adaptor w/ clock, $60
ICD Advantage driver disk,
power cable and manual
DMA cable 19-pin cable, AdSCSI+ to Atari $10
Atari SM124 Mono monitor, original $55
```

condition, no burn-in,
screen size never changed,
w/power and signal cables,
but no manual or box
Monitor switchbox Generic ST "monitor master"-type $15
gadget, with connections for
mono and color monitors, audio
output, and composite video
output (no manual)
Spectre GCR Macintosh emulator, $75
w/ 128K Mac ROMs, all disks,
all docs, Apple system
disks and manuals, floppy
drive cable
Atari mouse ordinary ST type, works fine $5
(no manual of course)

---------- S T P R O D U C T I V I T Y S O F T W A R E ----------

Diamond Back 3 is the most recent version, as the description
indicates. PageStream 2.2 runs fine on any Atari *or* emulator.
The other programs are mid-'80s vintage, and seem to run
fine with TOS 2.06 or earlier; but I don't know about, and
can't guarantee, compatibility with newer machines.

ITEM DESCRIPTION PRICE

Diamond Back 3 latest version of hard drive $28
backup program, supports
floppies/tapes/removables
PageStream v. 2.2 desktop publishing software, $35
works great with MagiCMac, incl.
PageAssistant help accessory
and extra font and clip-art
disks--latest version!
Easy-Draw drawing program, creates .GEM $10
files, an oldie but a goodie
LabelMaster Elite label-printing program (for $10
mailing lists, etc.)
Word Writer ST simple word processor $12
Swift Calc ST simple spreadsheet $12
Data Manager ST simple database manager $12
GFA BASIC BASIC interpreter, $10
early version, ST only
Lattice C v. 3.03.04 C compiler, early version $14

------------------------ S T G A M E S ------------------------

All these games are mid-'80s vintage also--they run fine on a 1040ST
with TOS 1.0 but I don't know about compatibility with other Ataris.

ITEM DESCRIPTION PRICE

Balance of Power political strategy game, w/box $8
Dungeon Master classic role-playing game w/box $10
Epyx Championship Wrestling pro wrestling game (no manual) $8
High Roller jet fighter simulation, w/box $8
Not a Penny More, mystery adventure, $10
Not a Penny Less with novel & box
Sundog: Frozen Legacy classic sci-fi adventure $10
Triad Vol. 2 three games in one: Tetris, $7
Baal, and Menace
Wheels of Fire four driving games in one $7

---------- E N D ----------

>However, as you say, it's quite a standard deal for a first sign up. If
>youwant to have a giggle about setup fees take a look at Pipex... !!

I may be wrong here but isn't pipex UK17 setup fee _plus_ the software
package? If you don't buy the software from them then it's a cheaper
signup than zetnet.

For the record cixip has a signup fee of UK10 irrespective of whether
you already have a conferencing account. In fact 'virgin' subscribers
are given a conferencing account, although they are not required to
use it: a friendly way to avoid the UK25 startup fee for conferencing.

Best wishes

Neil

True. Apple does not provide 800k versions of any System 7 via their
ftp archive.

> The problem of running Sys 7 on ST with GCR is not only the limited
> space (4megs of memory), but also that the Macintosh program bits have
> to be translated by the Spectre software to work with the Atari
> hardware.

I once read a Dave Small article that implied Apple had included a
lot more "Am I on a real Mac?" checks in System 7. He claimed their
existance in 6.0.x as well (though he managed to get around them, as did
the folks that wrote the other Amiga/ST Mac emulators). This seems
generally believable. Of course, there are also flaws or bugs in
the emulation, though it is generally very good. I've seen System 7.0 and
7.0.1 run on Mac Pluses, and they worked fine (tight on memory, but usable).
I'm not sure if 7.5.x supports the Pluses, but there is no reason to assume
that one could not run earlier System 7's using a Spectre, given new software!

From other Small articles and interviews, I got the impression that a
version 3.1 of the Spectre software was ready (in fact, Toad Computers
pre-advertised it for awhile) or very very close to ready, but then it
never appeared. Among other things, it claimed System 7 compatability
and better TT support, if I remember correctly. If such a thing does
exist, I really wish Dave Small would release it (perhaps as shareware).
Maybe there is some legal reason he cannot do this?

At first you should prepare 4bit image which uses standard desktops
16 colors - eg. snapshot while in 16 colors mode (It *must* use exactly
16 colors). Then you have to load your image under Gemview and let him
set his color palette (I don't remember the options, but it's easy if you
was working with it). Then load your 4bit image (and let him set
colors too) and reload 8bit image with fix (or maybe user) palette
option. You can also add some dithering and/or smoothing and/or nearest
color option.
Should works...

regards,

Simon.

2864. How to Program TOS 1.4 or KaosDesk in EPROM ?

My thanks for the above, ruffled feathers smoothed into shape again
<g>.

One of the problems is indeed testing for multiple providers, as I
know teh guys have found many bugs or problems appertaining to
specific IP's. We can't test for them all.

>For the record I have Oasis2 working very well with news,

Glad to hear it.

>but still have problems with POP3 mail choking. I have been in touch with

Problems here myself when I tested with Pipex, and wil be testing with
Cityscape this coming weekend.

>both Phil and Dave who have been quick to reply and helpful, and to whom I

Yep, I have started a FAQ on the bottom on the comment list, and Phil
stated he wants to use it as a basis for an official FAQ which will be
posted regularly.

2867. HP DJ600 Control

Newsgroup: comp.sys.atari.st
Date: 1996-05-15 00:00:00 UTC
From: Ali@land.demon.co.uk
Message-ID: <832252538_OASIS_@land.demon.co.uk>
Source record: 145058

Hi all,

Pretty please, this is a reposting. If anyone can offer suggestions I would be very grateful. I'm a struggling SF novelist and poet, (violins playing in background). I need to get this working for submitting my work to publishers.

Can anyone help me?

I recently bought an HP DJ600 printer which is replacing a Breeze 200 inkjet (DJ500 clone) which died :-(

I use 1st Word Plus and Timeworks 2 and the old printer worked well with both of these. I'm having a problem getting the new printer to print on the last inch and a quarter of the page. I find the same problem using both pieces of software. Whilst I can allow a larger margin at the foot of a WP page, which is a little inconvenient but not disastrous, I find that printing in landscape to produce A5 pamphlets DTP, the text is sheared off. According to the printer's specs it should print to half an inch from the foot of the page.

The 600 uses software configuration from a desktop menu, the old printer had its own set-up mode and could be configured from its `buttons'. How can I configure the 600 so that its print area is extended? I'm using an 1040 STE

Any help with this would be greatly appreciated.

Ali.

2868. Comment List # 31 - Just this once.

Newsgroup: comp.sys.atari.st
Date: 1996-05-15 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <14216792_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 145059
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

With reference to those who have decried the level of testing concerning the OASIS2/ICE package, I'm taking the liberty of posting below a copy of my latest 'Comment List' which is usually posted to the beta testers and NeST users only.

I've done this without the sanction of Phil and Dave (and expect to get my legs slapped), but I feel I must post the list at least once to show the typical depth of the beta work carried out, and to show how quickly Dave and Phil do fix any bugs reported to them. I usually get 2 new beta copies per week.

If anyone wishes to post any bugs theyy have discovered that I can verify I'll gladly add them to the list.

I may also continue to post this list (or a sanctioned version) to the newsgroups if Dave adn Phil allow, as I feel this will stave off a fair ammount of critisism and will also show actively how progress is being made.

Comments anyone?

Oasis Report - D.M.Brewood - Updated: 15/05/96 # 031 (posted to
== testers)

Comment list posted to the following official beta testers:

Colin Bernau (colbee@tyndale.apana.org.au)
David Greenhough (green@spirit.demon.co.uk)
Ron Keen (beta@gaiasys.demon.co.uk)
Neil Martin (Neil@yr-ynys.compulink.co.uk)
Gary Priest (gary@the-gap.demon.co.uk)
Dave Levi (Dave@levihome.demon.co.uk)
Phil Yeadon (Phil@yeadontt.demon.co.uk)

Test Machine: Falcon 030 running MagiC4 with Thing, operating in 1024 x 768 x 16 colours.

This comment list will also be posted in the NeST N.SUP.OASIS_ICE message echo on a weekly basis.

This data is based on the beta version(s) provided on:

ICE = 13th of May.
OASIS2 = 13th of May.

Package 2.01 is the last release version.
Package 2.02 will be the next release which is in beta test (various

stages).

New in ICE since the first official OASIS2 release:
==

2.01

- More TCP routines in machine code.
- Ftp bug fixed.
- Socket and Directory windows seperated.
- Debug q removed.
- ICE spead increased.
- News can now be sent without downloading news.

2.02

- IGNORE allowed in logon script to allow sending of multiple lines.
- IGNORE/n now supported (sends back a CR).
- ICE online clock disabled it the user runs on an (M)STe/ST-Book.

New in OASIS2 since the first official OASIS2 release:
==

2.00

- Window re-draw routines completely recoded.

2.01

- More Redraw code modifications.
- Fix of Local Post bug.
- Documentation corrected.

2.02

- Problem with unregistered article headers fixed.
- Edit SIG problem fixed.
- When examining articples ready to post in the Internet window, after the article is exited (using ESC) the initial window's contents are not redrawn - fixed.

New in ICE_NET since the first official OASIS2 release:
===

2.01

- Changes made to HELP dialogues.

List of possible bugs discovered in ICE so far:
===

- Fix packet CRC problems.
- Fix PPP packet bug where carrier drops.

List of possible bugs discovered in OASIS2:
===

- When logging onto Demon with an existant HEAD.OUT file you get an error and the program exits instead of appending the data.

- When unbatching headers/news from groups which have been deleted the data is not added to 'junk'. [Phil]

- Local Post bug with exit back to desktop.

- When 'New groups' is chosen the new groups are not added to the master listing as the process bombs out. The master listing appers to be lost but is still there as a backed up file.

- GEMDOS seek error when posting a mail mime document if nothing is writen in the external editor - i.e. enter external editor and exit immediately.

- In the Outbound window the IP name is always shown in upper case, this should be in the case as detailed in the config files.

- In PostBox doing 'Outmail' and reading outmail, then closing the postbox window and then selecting postbox shows inmail, but has outmail crossed. Clicking on the window clears the flag. Clicking on outmail again causes the system to bomb. Random bug, ok some times. On re-entering the program as soon as Outmail is selected the program bombs out immediately. This is pnly cured by a re-boot (possible 'terminate' problem with windows not being closed).

To-Do and Suggestion List:
==========

- Implement thread map for emails. [Will be implemented but after initial release]. [Phil]

- Update FROST to include: Use of full user names. [Dave/Daron/Phil]
: Implement ICE mail interface.

- Iconic control system for sending MIME multi-parts. [Phil]

- Implement stand alone Fronds (deamons):

- F.R.O.ST = Fidonet Reworked Operations ST. [Daron, Phil, & Dave]
- N.O.M.A.D = News Operation Moderation And Delivery (Moderation of newsgroups).
- P.A.L.M = Please Add Listed Mailshot (Mailing lists).
- C.A.M.E.L = Count And Manage Electoral Lists (Voting systems).
- = Autopost text file on a certain day each month

- Allow headers/messages to be selected via click and drag.
[Phil - maybe]

- When using the auto-locator when sending email messages it would be useful if a dialogue came up confirming the users name, and if more than one user shares that data (I have 4 Dave's in my yellow pages) then a selection dialogue should appear allowing you which user to select. This should just show the names available, not the full YPG's.
[Phil]

- Wanted: C include files for use with GFA MyDials dated 10/11/92;
export.h & import.h [For Phil - obtained by Daron, awaiting feedback]

- Add in function key selection of the user. [Phil]

- Implement use of SHIFT HOME to move cursor to the bottom of the mail and
news windows. [Phil]

- Add in skipping of newsgroups with unread mail similar to that used on
the news headers. [Phil]

- Can dialogs be added in to OASIS2/ICE to support setting of the
following to allow fine tuning? [Dave]

```
attach asy AUX: 0 ppp sl0 32767 1500 110
ip ttl 64
tcp mss 1460
tcp window 11680
tcp irtt 3000
tcp syndata on
ppp sl0 lcp local mru 1500
ppp sl0 lcp remote mru 1500
ppp sl0 lcp local accm 0x000a0000
```

- Clean exit to Oasis2 - it is bombs trap the error and set the time back
to what it should be.

- In the Outbound window - Window header should change to show 'outbound'.

- With each release made of the program(s) include a HISTORY.TXT file
detailing what has changed since the last release.

- Include sets of working log on examples for different providers in the
package.

Qasis / Ice FAQ's
==========

- Q: Can icons be added to those already used (as seen within the
toolbox)?
A: Yes - the TOOLS_LO.RSC and TOOLS_HI.RSC files may be edited to add
additional icons.

- Q: Can the subject be changed when replying to messages?
A: No, this is not allowed according to the RFC's.

- Q: What causes error OASIS FILE ERROR I:\OASIS2\NEWS\ARTICLES, and how
can it be corrected?
A: Try re-indexing the news group, sometimes the index gets corrupted
by drive fragmentation from a lot of unbatching and expiring. If
this fails, Wipe the group.

- Q: What do OASIS and ICE stand for?
A: OASIS = One Atari System Internet Software.
ICE = Internet Connection Extension.

- Q: How much is the registration fee for Oasis2 and ICE?
A: The registration fee is £30 pounds and gives a lifetimes
registration for OASISx, ICE, ICE_NET, and SPIDER.

- Q: If the email files get corrupted, how can this be fixed?
A: Delete the relevant .MIX file from the mail directory and when post
is selected the email will be reindexed.

- Q: I know that 'X-' reference lines may be added to the top of a
message manually to access things like Anon servers, but how can
these be added if for multi-part binary file transfers? Is it
possible?
A:

I know some of your problems, and one at least has been fixed; the one
where you need to send multiple lines to the IP.

>Perhaps you should make me a tester, Daron... ;)

I don't have the authority to do that, and all preregistered users had
the chance to be testers IIRC.

>I can vouch for the content - I've seen the reports.
>Even minor niggles are in there. ;)

Cheers for that Dave, I do ty to test thigns properly.

>Keep it going Daron. Good work.

No worries. Just come off the phone now after a long chat with Phil
over the latest buglets fixed.

>One question, though - what /is/ going on including OASIS_ED in the
>package??

Erm, why, what's wrong with it (sez he who always uses Everest).

>I assume this will be re-written in the future?

Possibly, not queried on that one.

>Thought that might cause the problem but it didn't work at modem 1 either.

OK, ICE does not try to 'setup' your modem port, the settings already
defined by your Control Panel/CPX and whatever serial patches are installed
is used. This was done because there are that many combinations of serial
port/software patch you can't cover all of them.

> >Sorry guys - but I'm quite disappointed by the "new" oasis. The Spider -
>the thing I was most excited of - is not included :((((And all the other
>stuff mainly looks very similar to the old oasis. And the wonderful easy
>setup throug ICE-NET doesn't seem that easy as promised.

The whole point of the similar look and feel is because it is what
poeple who already used OASIS are familiar with. If you bother to look at
the 'old' feartures, you will find that most of them have been extended in
one way or another. There are also quite a few totally new features as well.
Spider is getting under way in the next few days, it will basically be
a different user interface for ICE. There will be two versions, one that is
just Spider for Web browsing, the other that adds the Spider features to
ICE.
As for ICE_NET, I am not claiming it is perfect, but it has to better
that staring at a NOS startup and dial file in a text editro and wondering
what the hell it all means!

>
>And how does the shareware-lock work? Does it write any hidden data on my
>HD so that oasis2 knows how long I'm using it? - I hate programs that do
>wirte anything hidden on my HD without my knowledge and permission!

OASIS 2 writes NOTHING to your hard drive that is hidden, there is also
no time limit in OASIS 2. As for how the shareware lock actually works......

>In my opinion so far it seems that there's no serious competition to
>STiK/CAB, UPOINT, NOS etc.

Fine, everyone is entitled to there opinion, after all if we all agreed
with each other the world would be a very boring place.

One final point I would like to make about your news posting regards
your use of the MIME Content headers in a USENET posting.

>Newsgroups: comp.sys.atari.st

Lines: 48

Unless I am very mistaken, MIME (Multipart Internet MAIL Extension) is
an extension to the E-Mail standards not News. If I am wrong, please point
me to the relevant RFC that defines MIME for use in news articles.
I have taken a lot of criticism in the past over 'non-conformance' to
RFCs and other Internet standards. Surely a package that you recomend over
OASIS is not breaking these 'rules'.

There is a serious problem yet with Oasis 2. I don't know yet
whether it is machine specific, or server specific. Those of you who
you who are having problems, repost please saying what kind of
Atari you have, (st, TT, Falcon, etc.) and what kind of service
you are trying to use (PPP512, PPP 1024, Slip dynamic, Slip
fixed) what baud rate and port you are using, etc.
It does no good to say I have a problem, without defining it well.
E. G., I have a TT 4+4 using a 28.8 modem 2 with a slip with a
preassigned IP. I cant communicate at all above 9600 baud,
and at that speed, it gets CRC errors on downloading with
FTP. It thus appears there is a low level handshake problem,
like it doesn't accept hsmoda06 CTS well.
:-) There, that type of comment may just give some clue
what is really going wrong. :-{

Source record: 145106

Hello, All

I'm writing this through a BBS gate but I'm more and more tempted to take the plunge and get on the net myself.
Looking through the (UK) papers I noticed a company called Europe online which seemed cheaper than most of the others, being unemployed ATM cost is a big consideration. My question is whether I'll have any problems with them, from what I've read and heard I've kind of gained the impression that the British Atarian has little choice other than Demon for problem free(?) access. I've seen the recent thread about Zetnet and I have to agree with those who disliked the slightly large set-up fee.
If anyone has tried Europe online or has a list of Atari friendly providers I'd be glad to hear from you. In fact any advice would be appreciated, I've been BBS'ing for a couple of years now but I can't claim any great knowledge where the Internet is concerned so I'd like to know how deep the water is before I jump in :)

DITTO for me,

The connect script works but then everything seems to freeze and I rebooted. I've only tried it twice but same result both times. I also lost all my newsgroup msg's when I converted them. They seem to be in the folder but are inaccessible from the reader. Looks like a great program though and I really like the changes in the interface.
I'm using a 4160 STe with NeoDesk/Geneva, etc. running Oasis in single tasking. Great work guys, now if I can only get it running.

Rob

>but currently was pretty poor, danny has left Hensa and the Atari
>stuff is not being updated,

Danny leaves Hensa at the end of this month. Up until then it's business
as usual.
But one of the reasons he is leaving is that he is unable to devote the time
he would like to the Atari Section, being forced instead to put his efforts
into the Mac section.
I do not hold out much hope for the Atari section of Hensa after this, but I
know he is keen on maintaining another Atari Archive - space has been
made available for this at at least one site.

2877. Selling on Shareware registrations

Newsgroup: comp.sys.atari.st
Date: 1996-05-15 00:00:00 UTC
From: Steve Taylor <steve@bpfd.demon.co.uk>
Message-ID: <RFSXVUASSSmxEwuQ@bpfd.demon.co.uk>
Source record: 145110

Hello World.

Just a theoretical question - sure to provoke meaningful debate, or not as
the case may be...

Can I sell on my "shareware registrations" which I no longer use.
I know this means the authors lose out on new registrations, but if not, it
does spell out one disadvantage of Shareware as opposed to
Commercial Distribution, does it not???

Examples of shareware I have are:
(and absolutely no malice intended to the respective authors)
GSZRZ
Everest
Thing
Ruftrade
4-7-11
Oasis (well it's a pre-reg!)

Any thoughts appreciated.

First click on the city production map to take a square out of production.
This turns them into an Elvis.
Then click on the the Elvis icon to cycle through Tax man, Scientist and back to Elvis.

You can also use the normal digit keys where the 1 key changes the leftmost 'specialist'.

Hello all,

First question:
I'm the owner of a broken 1040ste.
I want try to fix it by myself, as a project.
Is there anyone who can help me to get an internal (schema)drawning or
other manuals for free.
Maybe you can give me a tip WHERE i can get such material if you didn't
own it by yourself!?

Thank a lot,

Henk

2881. Second IDE drive on a Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-05-15 00:00:00 UTC
From: mbge4mdc@meehpb01.ee.man.ac.uk
Message-ID: <4ncb5v$nj3@yama.mcc.ac.uk>
Source record: 145114

Yes, I know this has been covered before, but I (stupidly) didn't pay much attention at the time. I have now been given the chance to get an 850meg IDE drive for 50 quid, though, so I figured I'd finally recase my Falcon and get it.

What I need to know, however, is if there are any known restrictions on using a second IDE drive. I ALREADY HAVE HD DRIVER, so don't tell me about that. I also know about master/slave jumpers, so don't bother there. What I need to know is stuff like:-

o Will any IDE or EIDE drive work? Or are there types/manufacturers to avoid?

o Do they all have the same connections? I.e. will a 3.5" one have the same plug/socket as a 2.5"??

o Will I just need to "split" the lead, as I would to hang another SCSI device in the middle of a chain?

o Do I have to worry about terminators?

o Anything else anyone can help with.

Cheers in advance,

Xav

I'm looking into upgrading from a STe..... I want suggestions for any computer type and any software which can do decent audio editing of multiple tracks, C programming, graphical PPP internet and raytracing at a reasonable speed.....

I have had my eyes on a CLAB Falcon and Notator Logic Audio, but the support for Notator has been rudely cut off, what is my best choice? Is Cubase Audio anything as good as Logic Audio? Does either of these two items of software run better on other computer types?

Don't flame me, convert me (send me info instead of hate mail)

> ---

Perhaps I didn't make myself too clear here... I most certainly did not
mean to have a go at those who did beta testing, I'm sure you all did a good
job. I merely meant that the beta testing had maybe not been wide enough in
scope, with regard to providers used. I realise that this is probably hard
to set up anyway. No offence was intended to anyone.
For the record I have Oasis2 working very well with news,
but still have problems with POP3 mail choking. I have been in touch with
both Phil and Dave who have been quick to reply and helpful, and to whom I
feel indebted when I think of what getting internet connection on an Atari
was like just a year ago. The news functions and flexibility built in to
Oasis are tremendous, and when Spider arrives and all aspects are working
this is going to be one great program.
I have had to do a work around to get news to send properly,
BTW, because of my address not having a host name, if I can help anybody
else who has a similar problem by all means email me. Its clear from the
postings that people are having problems getting it up and running, I think
if tips are posted on a regular basis, things should rapidly improve.

Richard

>
> -Dan

Probably the best way is to get some long cable (as used on the SCSI
connectors) and build your own connector system.
It is possible to get the SCSI interface in the form of a clip that fits
around the forementioned cable, and when pushed hard will pierce the
cable giving a SCSI connection at that point.

There is the problem of connecting this string of SCSI connectors to the
SCSI bus, and you have to make sure each device has its IDs setup with
their jumpers correctly ...

In the summer I plan to build a Falcon Tower system and shove some 4/5
SCSI devices inside, but I'll probably end up hardwiring the mentioned
SCSI cables directly to the SCSI2 port on the motherboard !!!

anyone have any docs on installing softpc?

tae

You asked for it and here it is :). Raymond

This is one of the most solid programs I have ever run on my computer.
I limited SoftPC under Geneva to 2 megs. It is really a nice program
to run dos programs on your Atari.

DETAILED INTRUCTIONS ON HOW TO SET UP and USE SOFTPC FOR ATARI
Available on Power CD From Compo Software (TOAD COMPUTERS)

by Raymond Lohengrin

UNZIP FILE softPC and copy SoftPC folder to your C: Partition. Inside
the softPC folder you will find a zip file called C_DRIVE.ZIP. Unzip
this file and copy the file C_DRIVE.HDF to partition D: or just keep
it in the SoftPC folder. (this folder is a virtual IBM PC C: dive)

SoftPC looks at the file C_DIVE.HDF as a PC C: DRIVE. All files that
you copy from DOS to C: will be stored in the HDF file.

Loading SoftPC.

To load SoftPC run PCRUN.PRG. After about 5 to 15 seconds you will see a
Balck screen with GEM menues on top. This GEM menus are to configure
SoftPC and they are available at all times. If you have any problems
returning to DOS just select from the FILE menu RESET PC and then
abort. This trick can be used at any time to "WAKE UP" SoftPC.

The Gem menu PC drives is used to tell SoftPC where to find is
program folders and wich files will be used as "PC Drives" Remember
that your PC drive C: is not really your Atari C: Drive. When you use
DOS commands to format, write and copy to any DOS Drive (not A: or
B:) you are really refering to your .HDF files.

Select from the PC Drives menu E: HARD DISK to tell SoftPC where your
folder SOFTPC is. (C:\SOFTPC*.*) The path should be set up already.

To configure your PC drives go to the PC DRIVES menu and select C:
HARD DISK. Select your original C_DRIVE file and click OK
To created additional drives, select D: HARD DISK. Then, select
"CREARTE". You will need to write the information about the path of
the new HDF file you are creating and its size. Make sue not to
create an HDF file larger than the space available.

Example:
Create a new HDF file called MY-DATA.HDF with a size of 5 megabytes
long. on partition E: of your Atari Hard Drive.

Select D: HARD DISK from PC Drives menu and then select CREATE.
Type the following.
Disk Name E:\MY-DATA.HDF
Disk Size 05 Megabytes

Click OK.

The new file will be created on partition E: and then you will select
again D: HARD DISK but this time select FILE and locate the file
MY-DATA.HDF. The program will asked to be reset to activate the DRIVE
you have just created.

Now, load DOS from your floppy and at the DOS pront A:\ type "dir"
to list the available files.

Type C:\ and then "dir" to list files on C:\

To copy all file from a:\ to c:\ type a:\ retun and then copy *.* C:\ return.

To format your new created "D:" drive which is really your folder
MY-DATA.HDF"

Type fdisk to run the fdisk program.
After it loads select 5) to change current fixed disk drive.

Enter 2 at the:
"Enter fixed Disk drive Number (1-2).....2"
Use option 1 to create a DOS partition or Logical DOS Partition.
Select "y" for yes to use all the available space.
Press ESC to exit the fdisk program.

At the DOS pront type
format D:
the system will warn you that

"ALL DATA WILL BE ERASED"

Don't Panic this is just refering to your folder My-Data.hdf :-)

After your file is formated (drive D:) guive your new drive a label
like "PROGRAMS"

That is it, you have now a new drive D: available to SoftPC.

At the DOS pront type A:\ and return
Then type copy *.* D:\ to copy all information from a:\ to d:\

You can create as many D: partitions or HDF folders as you like, but
you will have to reset SoftPC for the DHF file to be available.

Enjoy softPC.

Raymond Lohengrin 4/4/96

Some useful DOS Commands:

"dir" List information on Drive
"copy (file name) C:\ Copy the file to C:\
"del" Delete
. Every thing
*.DOC all file ending with DOC
CD (directory or folder name) Chage to a directory Example CD DATA

Other Information.

To return to DOS use Control/Alternate/Delete.
Clr Home Key resets the GEM mouse and takes you back to activates the
GEM Menu.
If you are booting from C:\ make sure not to have a floppy on A:\
If you want to boot from A:\ use a floppy containing DOS.
A great program that makes life on SoftPC easier is Norton Comander.
This program uses "GEM Style" menus to perform file management
functions and also to view and edit files.

Use PCDFMT to format floppys.
to format C:\ to autoload DOS use command

Format C:/s

The Drive will be formated and DOS will be set to AUTOBOOT.

Classical guitarist Raymond Lohengrin

>
> Does anyone know of a TOS patch for this problem? If so, email me...
>

IIRC you can get around this w/o using that little auto proggy. In your
DESKTOP.INF file, there is a line starting #Z. Change (using a text
editor) the number following the Z to 13 (I think it defaults to 12).
Save the DESKTOP.INF and reboot. Your STe should boot into medium rez
forever more, or at least until you save the desktop again and forget to
edit the DESKTOP.INF.

Katherine L Ellis (kellis@mtholyoke.edu) wrote:
: Hi, I have few question about Multitasking.

: What are the differences between Preemptive multitasking and co?
: something multitasking?
I won't bother with that, see the others... ;-)

: How can I use the drive U:?
This is present in MiNT/MultiTOS/N.AES, and in MagiC 3 and later.
But why would you want to use it? Never really missed that one...

: Is Mint compatible with MagiC?
MiNT is just an enhancement to TOS which is supposed to make it look more
like Unix. With MiNT alone, you'll only be able to have several TOS and
TTP programs running at the same time. To run more than one GEM application,
you'll either need a new AES such as MultiTOS or N.AES, or MagiC.
MagiC 3 and 4 are approaching MiNT compatibility, but haven't yet reached
it. But to you as a user (as I think you are) won't really notice the
difference. The AES's of both, namely N.AES and MagiC, are reasonably
compatible.

: How can I get a max compatibility with some software.
I think MagiC is more compatible with older, and less cleanly written,
TOS software than MiNT/... is, because you can establish "Single Mode"
for those programs that won't do with multitasking. The Pure Pascal IDE
eG crashes in MultiTOS and MagiC, but runs happily in MagiC's Single
Mode. MagiC acts as if it were TOS to this application, so to say.

: How much memory do I need to run Magic.
Well, I've once installed it on a 1MB ST, just to see if it could be done.
It could, but there were less than 200kB free afterwards. So, 2MB is
absolute minimum, three might work reasonably well if you don't have
too memory-hungry applications, and four will do nicely.

: Geneva seems to be more compatible, am I right?
No idea.

: Why is good to have a multitasking environment? How do you use
: it personally?
I've got used to being able to start an editor, or a game, or whatever
while my machine is busy TeXing or compiling things. Also, it helps to
configure the machine more easily because I don't need to reboot to
load and unload accessories, it's easier to just start and stop programs.
I don't really think I *need* it, but it's something that you get used
to really fast, and something that I really miss when I mistakenly boot
TOS...

One more thing: I don't know what machine you have, but if it's an ST or
STE or anything else below a TT, you ought to *forget* MultiTOS *right now*.
It's just incredibly slow. MagiC, on the other hand, is incredibly fast,
I even think that it makes whatever application runs in front feel *faster*
than the same application would be with TOS. Someone once said, "it's like
running an accelerator and getting the multitasking thrown in for free".
So, if I may suggest something: Try MagiC, you'll love it.

Erik Meltzer

: Ian_Taylor@a2w.maus.sub.org barked in U.COMP.SYS.ATARI.ST on 11 May 96:

: >> No, this won't work. Linux or NetBSD (not FreeBSD) are operating
: >> systems of their own. MagiC is an operating system of its own, too. You
: >> can only run one of these systems at the same time.
: IT> Apparently MagiC-PC will run under W95. Is this multitasking
: IT> multitasking?

: Not likely. The only WIN product that actually multitasks is NT; the
: others (3.x, 95) are task-switchers (and don't do it awfully well). I
: suspect that MagiC-PC under WIN95 will be crippled rather badly.

Hi, I think it doesn't really matter whether or not the host operating
system (MacOS, Windows) is a real multitasking system or not, because
MagicMac and MagicPC emulate an Atari running MagiC. So, multitasking
among Atari applications works just like it does with MagiC on an ST.
The only thing that is affected is the way the emulated Atari interacts
with Win or Mac applications, and at least Mac applications are said to
cripple the Atari performance in MagicMac. Whether or not this will also
be the case in MagicPC I cannot say, but I strongly suspect it because
even a DOS box running some archiver in background does slow, and is slowed
by, Windows applications -- after all, even with pre-emptive multitasking
there's only a limited amount of CPU power, and that's something Windows
consumes readily in almost any amount...

Please excuse my poor English!

From: sobek@irit.fr
Message-ID: <SOBEK.96May15194900@dusty.irit.fr>
Source record: 145131
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Is it possible to dump a hard disk to either an Exabyte drive on the
local SCSI bus, or (now that Atari's can communicate via IP) possible
to use a remote dump utility on a Sun? Has dump/rdump been ported to
the Atari ST? Can GEMAR be used in one of these configurations? How?

Thanks in advance!

Source record: 145133

Dennis McGuire (mcguired@moose.erie.net) wrote:

: Is anyone using the LAN port version of DUET successfully? I
Not that I know of, and I don't think anyone can, because its author
(whose name for the moment escapes me, was it Andreas Alich?) wasn't
so enthusiastic about its future when last I contacted him. I have
a beta test version 1.01 of DUET, which AFAIK is the last one ever
made, and I mean to remember there was some trouble with the LAN port.
I'm sorry, I can't just look because my STs are not where I am writing
this.

: Also, is DUET still being supported or updated? Does the
: networked printer option work? I've never been able to run that
: successfully either.
Support: see above. But maybe if you guys registered, the author
would think about it?!
Network printer: I've had that running about a year ago, with an
Epson 9-pin printer via MIDI, using the DUET 1.00 which was the last
freely distributed version. There have been some crashes, though,
and anything beyond ASCII text was inredibly slow... but it worked
no problem. What exactly are your problems?

BTW: Does anyone want to run DUET under MagiC? I've written a small
application to enable this by regularily making some BIOS call.
DUET needs those and MagiC apparently doesn't make any. If someone
needs this, mail me, and I'll put it on some ftp site!

Please reply via eMail as I don't read this goup on a regular basis.

Xav (mbge4mdc@meehpb01.ee.man.ac.uk) wrote:
: o Will any IDE or EIDE drive work? Or are there types/manufacturers to avoid?

To my knowledge any IDE or EIDE will work.

:
: o Do they all have the same connections? I.e. will a 3.5" one have the same plug/socket as a 2.5"??

No, they're different in two ways; the 2.5" plug is smaller and has four additional pins for the power. You'll need an adaptor of some kind, the easiest will be to buy one designed for the Amiga 600 or 1200. Since you also want your 2.5" drive attached at the same time, you'll probably need to solder a bit too.

: o Will I just need to "split" the lead, as I would to hang another SCSI device in the middle of a chain?

Except for the differences in the plugs; yes.

: o Do I have to worry about terminators?

No such things on IDE-drives.

From: floating pile of pestilence <chrishinds@delphi.com>
Message-ID: <BPLMJnd.chrishinds@delphi.com>
Source record: 145150

Hi again

I've discovered another error, and this time I'm able to recreate it. The first time I tried to expire a mail item, it accessed the disk for a bit and then 2 bombed. When I re-entered Oasis, the mail item was gone.

Then, I tried to expire another mail item. The same disk access happened, but a dialog box came up saying: "Sring too Long max. 32767 characters" Pressing return dumped me back to the desktop. The mail item was gone when going back into Oasis. The same thing happened two more times.

Any help out there is Atari-land??

>But I am not new to computers.

A good book to get for learning the 'ways' of the Internet is "Internet For Dummies". With all due respect to your many years of computer usage, it's advantage for even the harden expert new to the Internet to get this book since this is a society of it's own. Even though written for 'newbies', any seasoned computer user can master most of the services with this book.

>And use it well. I would like to help keep alive
>a damn good computer like the Atari. But I can't by myself.

The community togetherness of Atari users makes this different from any other platform and the Internet has been the greatest thing to happen to Atari computers. :)

Message-ID: <832208042_OASIS_@finitive.demon.co.uk>
Source record: 145153

HI to all,
Can't seem to get it working, I done everything everyones said
so far I even read the manuals (don't do this often!).
Playing around with it doing all sorts to get it working I
finally managed to , by deleting the outgoing folder !!
So why does ICE work with out the folder and not with it.
NOTE I haven't yet actually taken in on line, this was just
to get the command line to appear!!!
If it helps I'm using 4Meg Ste, and it doesn't matter what
other progs are turned on or off!
Thanks to anyone who can actually solve this!
Ade.

It looks like Gribnif Software is still kicking, so I think I'll
post this again:

During housecleaning a couple of years ago I happened upon
the original disk + manual from STalker 3.0, a very good GEM-based
terminal program, and STedit 1.0, a very good basic DA text editor.

Alas, I don't have an Atari any more, but perhaps someone
in this group would be interested in the package?

If you send me a $3.20 US stamp (2lb priority mail), I'll
throw it into an envelope and send it your way. I'll also
include a letter transferring the license if you wish.
If you're not in the US, we can figure out how many I.R.C.'s
you'll need to include -- I'm happy either way.

Thanks,

-- Adam Tilghman, atilghma@mib.org

Source record: 145253

Hi! :-) :-) :-) :-)
Enough smileys? :-) :-)
I guess I am the guy every body is flaming about with my
ill advised humor about Europeans and chauvanism.
To all who took offense, it wasn't intended.
I may not be familiar with smileys and all of the other
conventions of conveying messages on a post line.
Hell, I still can't even figure out what IHMO means except
International Health Maintanence Organization!! :-)
I am relatively new to this internet posting shit.
But I am not new to computers. Hell I have serial nos.
8, 9, and 11 of Atari 520 ST's. that were made expressly for
by Shivji.□, with socketed 68000's. And anybody who claims
to know anything about Atari's who doesn't know about Shivji
Hasn't dried out behind the floppy ears yet. My first
microcomputer was a KIM with 1K of memory and a keypad interface.
Before I was thru with it, this lowly KIM had 128K,
a floating point (AMD) processor, and two 8" floppies.]
I wrote the goddam 68020 assembler for the UCSD p-system.□,
if anyone remembers it. :-) (see, smileys)
I built a damn 68020 single board computer with an
881 processor before Most of you knew what a goddam computer was.
I am a retired (very recently) professor of Chemistry AND
computer Science to whom computers are a more serious thing
than something to draw pretty pictures and make pretty music with.
:-) :-) Se, more smileys.
At any rate, yes I was pissed off that there was a German
Thing available for public use if you only had the good sense
to read and understand German. Well I passed my Ph.D. exams
in German and studied it for 4 years, but I am not fluent enough
to use a German program easily with all of the modern
computerese in them.
Well, to make a long story short, although
I have been using Ataris and other computers for many
years, (I guess my first programming experiences
were with patch cord programs in 1964, and I was good
friends with the guys who invented Eniac at the U. of Pa.)
and have about 15 of them in my lab, of various vintages
and powers, I recently started reusing them more at home
as interfaces to my VAX at the lab, and upgraded
from a 520 ST to a 1040 STf 4 Meg/16 MHz, to a recently
acquired TT (no not one fo the Atari specials).
I was well aware of the popularity of the Atari's

in Europe, having worked there on them in Sabbaticals,
and on extended exchange scholar programs. When I started
to try to use them here, back in the states, I was appalled
That there were so few decent commercial programs available,
and so many PD and other programs in German (:-() that
just weren't usable in English. Despite several e-mails
to authors of older German programs, with very unpleasant
(or no replies at all) responses, I admit I got a little
annoyed at programs available in German ONLY, with no hope
of getting them in English. :-(
Well, I for one was one who applauded K. Ellis's
attempts, misguided or not to make thing 1.0 available
in English when it was publicly available all over the world
in German. Just because a program is posted on Berlin,
or Clausthall, doesn't mean it is not available in the US.
Or Canada. Or NZ. Or Fuji. :-}
I am a recent arrival at this field of csas, and maybe
don't know all of the unspoken rules of csas etiquette.
But I have a good computer and I wan't to use it.
And use it well. I would like to help keep alive
a damn good computer like the Atari. But I can't by myself.
I have been a beta tester for the recent telnet, and for the
still to be released MG-FTP 1.05 (my found bugs are among
the reasons 1.04b and 1.05 are not yet released.
I just posted a long post about problems and bugs I found
in the new Oasis 2, which I hope will be used constructively
by the authors.
I will support shareware, where it is good, and solid.
I won't support shit that is still in the alpha stage, let alone
the beta stage nominally, that really should still be called alpha.
In this tiny world of Atari, programs that are worthwhile
should be worthwhile for the whole damn world, not for a select few.
I will beta test any software for anyone who wants it,
even though I have been paid handsomely by commercial
companies for this service in the past.

If I offended any one for my references to European
chauvanism, I apologize. But if we all want to keep this computer
alive, we must all work to keep it so.
Well, :-9, enough sermonizing. To those I offended,
mea culpa.
Prof. Boris D. Cahan

Source record: 145006

Hi Daron,

I am using CoMa with a USR Courier V34+ modem and think I have the same problem (which I am sure I saw documented somewhere as a USR problem).

Everytime I send a fax to my office fax (old machine, by the way), the fax is perfectly received... but at the end of the first page the modem tells CoMa that there was an "error", which CoMa dutifully reports to you and quits sending. At the receiving end I get the fax ok and also an error report stating that the failure was due to the remote modem disconnecting for 0.2 seconds or more.

The solution is to go into the setup parameters (either the standard or expert screens) and tick the box to ignore page errors.

Then CoMa will send all the pages - but the receiving machine will still print an error report (as well as the fax). Don't know how you then know for sure that the fax transmission was successful.

Apart from this, I think CoMa is an excellent program.
I really would like to solve this, though. I posted a message in the usr conference on cix asking if people on other platforms have the same problem with USR modems... and got no reply. I've scanned the S settings in the manual and see nothing obvious - I think most of the fax settings are hidden under 'Reserved', though.

Hi Ali

My Father has just bought a 600, on my recommendation, and although we have got Everest and Imagecopy to print fine (and in colour with the latter!), we haven't been able to get Write On to work. As the printer and I are 250 miles apart, I can only go on the error messages read out over the phone.

Unfortunately, although I can't help out on the Timeworks front, because I can't install that for my Father, due to disk and memory limitations, you *might* be able to change the 600 internally by using the REMOTE CONTROL CPX which is actually meant for use with the Laserjet series. I only say this because I understand that Deskjets, especially new ones, more-or-less use the same commands. I might be wrong, but it may be worth a try. In this CPX you can change the default font, page length etc, and I would imagine this could be common to all HP printers.

Sorry I can't be of much more help, I need help myself so we can get Write On working, it just comes up with a message saying it can't find a font (which I presume is one of the printer's built-in ones, although it just says PICA, and from my own experiments, I know that this can't be deleted from the Write On font list - it's the default, but Write On doesn't seem to be able to find a similar one in the 600 :-(

From: atlan@arkon.zodiac.de
Message-ID: <GEQPECAFUP@arkon.zodiac.de>
Source record: 145016

In <4nam62$l3h@holly.cc.uleth.ca> Patric Collins wrote:

>Does anyone know how to change people into tax collectors?
>In civilization'

Perhaps You should try the Civi-Patch made by juergen_keitel@ki.maus.de; the
newest version which is actually 1.7.2 is always available on my file server.
Just send a mail to 'fileserver@arkon.zodiac.de' with the subject 'help' and
without text in the body to get a help file.

------------------------------ cut here ------------------------------

This is the 'broken-english' documentation to 'Civi-Patch 1.6'

First of all: I don't take responsibility for any damage caused by the
use of Civ_ptch.

CIV_PTCH is Freeware.

Whats Civi-Patch for?

With Civi Patch you can patch the *.sve Files created by the comer.
Game Civilisation. This includes account of gold, aim of research,
type of goverment, diplomacy and most values of units.
You can edit files created by the Atari or the DOS-version. (Perhaps Mac and
Amiga too, try it and tell me). At DOS-files it could be impossible to change
the units - CivPatch will tell.

I esplain the use of the Prg via the menue:

1) patche...(first menue-entry)

After choosing the proper *.sve file, a dialog appears, where you can choose
the things you want to change. If you leave the dialog with 'OK', the changes
are carried out, otherwise not. Choosing the button 'undo' will undo all
changes, in the apearing alert-box you can choose, if the subdialogs (s.
1.extra) will be reset too (choose 'groï¿½'), or not (choose 'klein').
[Shift]-click means big, [ctrl]-click means small undo without alert.
Notice that the checkboxes, that were selected the last time are selected now too.

1.0) Change the difficulty level (alt S)

The actual d.l. is shown in the popup, you can change it with the popup.

1.1) Volk (alt V)

You change the name of your people, if the checkbox is selected.

1.2) form of goverment (alt R)

The actual form of g. is shown in the popup, you can change it with the popup.

1.3) Gold auf (alt G)

Set your gold to the choosen value, the original value is selected.

1.4) Jahr auf (alt J)

Set the year to to a value, that you choose. To set BC/AD, select the button in the proper way. The shortcut selects the button BC/AD.
(You should use values under 32768)

1.5) decke Karte auf (alt K)

The map is known, but only terrain, no citys, no irrigations and so on.

1.6) Stadt aufpeppen (alt T)

The first city OF ALL is changed in many values (try). Attention: This means the first city founded (usually) in the first round in the order (white, green, blue, yellow, ...). This means it has not to be yours!!! - if you want so, take roman or russian and strike 'B' in the FIRST round (in 'Civilisation').

1.7) Forsch. fertig (alt F)

Set your 'research-amount' to one round before researched (this fails sometimes to two rounds).

1.8) Forschung

There's a button, named with the original aim of research, if you click on it, a window appears where you can select a new one.

1.extra)

There are three buttons in the 'fenced around' area 'extra', choosing one of these will trigger off a relevant subdialog:

1.e.1) Diplomatie (alt D)

You can change your diplomatic relations, therefore a second dialog appears in which you have to choise the (other) people and your diplomatics, your own people is mentioned by "*DU SELBST*", a peoples-name with an '?' means, that it is stunned or not existant:
'Du hast mit ihm' means your employment to them. 'Er hat mit Dir' means their emplo. to you. (must'n be the same!
'Seine anderen' sets the diplomatics of the choosen people to all other people (you can choose your people as 'other' people in the first popup, to use this feature). You can choose of course in 'seine anderen' another entry than your special relationship, so that another people may have war with anyone but you. The diplomatics may change in the runtime of the game of course.
'Krieg' - war, 'Frieden' - peace, 'kein Vertrag' - you have a embassy. '-' no change.

The button `Tu es' means OK, 'undo diplo' will undo ALL Changes including that ones you did in a further dialog.

1.e.2) "laehmen" (alt L)

Selection of a checkbox means, that this people will be stunned. The non existing people are selected too - if you disselect them, they will 'die' in Civi immediatltely.

1.e.3) Raumschiff (alt M)

Set the spaceships of all (existing) people. For each people there's a set of radio-buttons: The first builds a spaceship, the second will dismantle, the third will change nothing. Notice that you can't see the spaceship of a nation in Civi, if you havn't seen parts of it before (this includes your own!) - so the people has to build at least one part to notice (eg. to launch) his spaceship.
Notice that the landing of your ship will only be remarked, if the year of arrivial is played! So you've got to set the year proper, if it earlier than usual (In the early dates you don't play each year).

2) alle Vï¿½lker...

In this dialog, you can change some values of all people:
Peoples-name, form of goverment, Gold, 'Research-amount'(=Forsch.).
Your own peoples-name is outlined and shadowed.
This dialog can be used for different purposes:
- info: who's out there?
- bad guys: anything to 0, goverment to despotism (or in the beginning democracy :-))
- good guys: help the little people (than your are not the only one to fight with the strongest enemy).

3) Einheiten...(second menue-entry)

You can change the values of ALL units (for the other people too!).
First of all you should select a file that contains data about them:
In the *.sve file or in a file created from CIV_PTCH with the extension BLK.
In the upper right of the dialog you can load(save) from(in) blk/sve - files
First ROW Block, second row *.sve. First COLUMN load, second save.
(I created the -very simple- 'Block'-format to 'store' good variations for more than one game).
In the right half you can select the actual unit - in the left its values:
'Name' - name
'Angriff' - attack
'Verteid' - defense
'Bew.Weite' - range of movement
'Kosten/10' - cost of building divided by ten
'Bew.Art' - the way to walk: 'Land' - land, 'Luft' - air, 'See' - sea
'Rd. in Luft' - if via air: Rounds in the air.
'Transport' - the account of units that can be transported (also available to air-units :-)
'kommt bei' - the needed research to get this unit. (click on the button right)
'geht bei' - after gettin' this research you won't be able to build this kind

of units.
If you want to change the values of the selected unit in the way you did you have to click on 'merken' (or strike return), otherwise the selection of another unit-name will erase your changes!
To leave the dialog choose 'fertig', if you have changed values but don't saved it in any way
(blk or sve) an alert appears, so you can save now.

4) Seitenwech... (third menue-entry)

You can change your people (if things gettin' strong) :-)
First select your *.sve file, than choose your (new) people, your own people is marked. You can only choose people that exist - the stunned peoples (see 1.e.2) are not 'available'.

General

The *.sve files created by 'civi' are named like 'civil#.sve', where # is a number between 0 and 9. To get your number count from above in the civi-save or -load menue: 0, 1, 2, ...

All changes 'Civ_ptch' does, are made in the original *.sve file, so make a 'backup' if you want to use it later in the original form.

Often the dialogs are usable via shortcuts: Use Alternate and the underbared char, or the mentioned char next to an object.
The default exit-buttons of the dialogs are changeable by [ctrl][tab]

I create two files when quiting: DESKTOP.CFG contains what was changed last in the *.sve (so the checkboxes are selected in the same matter nexr time), and CIV_PATH.DAT contains your path to 'civilisation'.

BTW I do rename the "barbarians" to "fascsists" as soon as they occupy a city - it's a more proper concept of the enemy.

David Ferguson wrote this to All about Atari Falcon?:
DF> Someone please give me info on the Atari Falcon. Does anyone
DF> have a Falcon with MIDI sequencing, software, etc.? How much
DF> do they go for? Any info on them would be appreciated.

Hi David,
It's very difficult to tell you in general terms, but I've been using my Falcon for about 1.5 years now in my studio and I've recorded a lot with it. I use Cubase Audio, which gives you 8 audio tracks in full DAT-quality or 16 tracks with compression of the data (like DCC and MD). Please ask away if you want to know something specific, but there are so many aspects to sequencing that it's impossible to describe if you don't narrow the subject...

Best regards,

Claes

2941. Thalion's Game, "Dragonflight" - HELP!

Newsgroup: comp.sys.atari.st
Date: 1996-05-16 00:00:00 UTC
From: rmgreen@ophelia.waterloo.net
Message-ID: <4ng8lh$999@ophelia.waterloo.net>
Source record: 145018

Dear Atari Net-folks;

Every once in a while, I look through various ST games which I've left mostly-but-not-quite-finished for one reason or another. One game which I would *very* much like to complete is Thalion's "Dragonflight" (dated around 1990 or so).

To be precise, what are the answers to the darned Riddle-tongues!? I've tried every single word or phrase I could think of relating both to the on-screen game and the history in the manual, but nothing works except for one or two of the really easy/basic ones. Anyone who could supply me with the correct answers to these arcane guardians would receive many thanks!

(And it's not as if I'm "not ready to advance" or any such thing; I've already advanced the entire party to maximum experience and spell points, and given them all the magic repeating throwing blades - even a Dragonring or two!)

Thanks in advance.

- Ronald M. Green -

>always possible though...

I must admit I agree with that 100%. I do know Dave adn Phil wanted to
get something out to the users though due to worries about the
programs being consdiered vapourware.

>That raises the question that there should have been more beta
>testers to give a wider testing on hardware/software configurations
>most of the problems I have had up to now are software and nothing to
>do with servers.

I believe that pre-registered users were given the option to beta
test, although I'm not 100% sure of that, as I'm the exception that
proves the rule.

>I know how long it can take to test things online and how expensive it
>can get. I am at the moment setting up my pc as a server so I can slip
>into it and test software that way.. although quite a bit will still
>have to be done online.

Yep, but the price paid for getting software early.

>Dave and Phil do work hard I was supprised to see 2.01 out so quickly
>and 2.02 is in beta aready..

Exactly, it's common for the guys to put in 8 hours a night coding,
and at weekends from 8:pm until 5:00am is quite common. Going for a
major coding bash tomorrow night so I'm expecting little sleep.

>I dont think he was doubting the accuracy of the beta testers and
>reports but that there wasn't enough testing done the reports were
>great but they only reported bugs which had been found :)

Sure, but I for one search a program for bugs, spent an hour last
night ferreting out a few more in areas of the program I've not used
much.

Put the OUTGOING folder back IMMEDIATELY. If this folder is missing you
will have big problems trying to send e-mail or news!

As you are using an STe turn of the on-screen clock using the General
Details dialog in ICE_NET and things should run smoother,

Hi Martin!

You wrote:

MB>There are some prog that not works very well with the freedom
MB>fileselector, like Kandinsky (not at all)

Sorry, but Kandinsky hasn't got *any* problems with Freedom!

If you choose (from the 'Options - Windows'-menu) 'Dialogs in windows'
Freedom will come in a window, and if you didn't it will appear in a
dialog. But anyway: Freedom works perfect with Kandinsky.

Which Version of Kandinsky? I've got 2.03.

From: "Gerald W. Gordon" <gordon@med.unc.edu>
Message-ID: <4nfv1t$dff@newz.oit.unc.edu>
Source record: 145025

I have just added a Megafile 30 to an Atari Mega4. It needs to be and is configured as drive 0 on the ACSI bus. I previously had an ICD FA-ST drive as drive 0 and I would like to configure it as drive 1 so I can use both drives. There is no ID select switch on the outside of the case. If you know how to set the ID I would love to hear from you via email since I rarely read this group. Will I have to reconfigure the Atari SLM605 printer as well?

Thanks very much,
Jerry

Doesn't Zero-X (STE and up, IIRC) support uploading/downloading of
sample data to/from external sample modules. The demo only downloads,
and the full version is 150 uk pounds...

Anyway, Zero-X is the only software I know of that might do the job...

>
>Yes, there are lots! (degas/degas elite files are easy to code...)
>
>Try crack art - IIRC. That had PI?/PC? compatability...

Yes! Crackart is superb. Lots of formats and buckets of functions that work very quickly. Sadly I don't think it ever got around to supporting the STE's extended palette, so Degas Elite pcitures will lose a bit of depth. Better than nothing though, and a while back ST Format gave away Prism Paint, which is less flexible but VDI compliant so uses whatever you have - i.e. 12-bit palette if you're an STE user, perfect for those Degas Elite pics. Sorry for the waffle, just had a bad exam...

2962. Re: Seurat Version 3.0 Info..

Newsgroup: comp.sys.atari.st
Date: 1996-05-16 00:00:00 UTC
From: m.harvey@ix.netcom.com
Message-ID: <4neeig$s4d@dfw-ixnews4.ix.netcom.com>
Source record: 145076

Can anyone out there provide me with either a e-mail or phone number to contact Mr Webb, the author of Seurat graphics program..

I had gotten my first free upgrade, version 3.0, but the disk was defective (disk actually came apart (the plastic sides of the disk) and I mailed it back to his address some time ago, and have never gotten a requested replacement disk.
The address I had was P.O. Box 277 Bunker Hill IL 62014 USA.

If anyone has an easy way to contact Mr Webb, I'd greatly appreciate it. Thanks..

No no no no no. NeoChrome was never PD. Ever. Atari got pissed off when people
started to assume it was PD and spread it as such. I bought an original, boxed
copy from Goodmans PD a couple of years ago. Good deal, only 2.50 UKP! Nice
thick manual and all...

There is another option. NeoChrome Master. This was a hacked/upgraded version
with support for the STE, and was done by a member of Delta Force (demo group)
who even suggests that if you use it, you send some money to Atari, not himself!

>done with any other Internet Service Provider.

I've been posting to this group for weeks using oasis2 beta from
cixip. It took some trouble on Dave's part to get it up and running
BTW because cixip doesn't seem to comply with the RFC's either.

So when you say there 'appears to have been no testing with any other
provider' perhaps having a little 'look' will help change your mind
;-)

Best wishes

Neil

I had a similar problem, I found that I was changing the wrong config file. You need to put the config file in the same directory as freedom. There is a section in the file under the heading "exclude", put the filename of the application that you want freedom disabled for, no extension or path. Then it should run fine.

>A fair number of the bugs I have seen in 2.01 were not present in the
>last beta versions, and bugs I have long reported have been fixed in
>version 2.02 where Dave finally found the problems last night.

I would have thought that the only thing which should change between
the last beta and the release is the version number. If anything else
is getting changed should not these go for beta testing before they
are released? Thats just my view on the subject.. I know its not
always possible though...

>Take into account that there are not many testers, and we can only
>test out certain servers.

That raises the question that there should have been more beta
testers to give a wider testing on hardware/software configurations
most of the problems I have had up to now are software and nothing to
do with servers.

>I myself have tested Demon, Pipex, and am in the midst of testing
>Cityscape out. I esitmate my calls have doubled as far as accessing
>the internet is concerned, and I must spend at least 3-4 hours each
>day trying to find fault with the latest beta copies and each bug is
>listed immediately.

I know how long it can take to test things online and how expensive it
can get. I am at the moment setting up my pc as a server so I can slip
into it and test software that way.. although quite a bit will still
have to be done online.

>For major bugs a call is made to Phil or Dave immediately and is
>usually fixed within 24 hours unless it is a real pain to find and
>fix.

Dave and Phil do work hard I was supprised to see 2.01 out so quickly
and 2.02 is in beta aready..

>If you doubt the content and accuracy of the beta test reports I
>produce then ask the other testers, they can verify the accuracy and
>depth of the data given.

I dont think he was doubting the accuracy of the beta testers and
reports but that there wasn't enough testing done the reports were

great but they only reported bugs which had been found :)

Hi!

"Small" problem with Oass 2.00E:

When I start ICE, the computer freezes up:
The menu bar cannot be selected, windows cannot be resized, moved,
activated etc..
The only thing that works is the mouse pointer, which still moves
around, and the key click (however, besides of the click nothing happens),
this was tested under Magic 4.01 with NVDI as well as plain TOS 2.06 with
no ACC or whatever.
System: Mega STE/4
Note: I do not have any experience in setting up NOS or any other script
to get into the internet.
However, this should not lead to the computer to simply freeze up.

Regards,

Alfred

Hi!
I just found a bug that MAY be the cause of
Oasis freezing on dialup. Apparently some providers
only put <lf>'s in their preamble. ICE, in its current
flavor keeps looking for <cf□r><lf> and never finds it.
Therefore it hangs. Right after "CONNECT" from the
MODEM. Dave has been informed, and is working on it.
Those whose programs freeze on dial-up retain HOPE. ;-)
There may be a 2.02 from it soon?

>
> 1)what speed should the STe be able to use?

Almost any speed. anything 100ns or less should work perfectly.

> 2)Can the STe work off of just 1 1mb x 8 simm?

No, the STE needs simms in pair. You must install 2 or 4 simms.

> 3)Is it possible to use 4mb x 8 simms ?

I guess. But it is a terrible waste of simms. Max memory is 4mb with 4 1mb
simms.

> 4)is there a specific 1mb x 8, 30 pin simm that I should be using?

No, and actually any 30 pin simm will do. 8 or 9 bit, the STE doesn't
care. 1 mb or 256kb simms.

> 5)Are all 1mb x 8,30 pin simms all the same??

No, some computers depend on vendor-specific simms. However, Atari isn't
one of them.

// Tommy

Try sending the codes 027 038 108 050 054 065 to your printer first, this is
the control sequence to set it to A4 paper and will probably do the trick.

It would also be worth your while to visit HP's home page and download the
list of HP600 series control codes from there. I think the URL is
http://hp.com, BICBW.

I've got the 660C printer BTW.

Speak to 'ya later!

> Please post this info. I'm sure people here would like to know this,
> because small IDE drives are v cheap (due to Windoze demanding 60MB of
> space, plus 20 per app). What driver software do you use with it though?
the driver is on the cartridge, so you don't have to worry. and it won't
run with other driver.
details: with my caviar 210mb /don't remember the type/ it reads about
900kb/sec and writes about 350kb/sec /tested on long files/
all you need to run the hard drive with the cartridge is this interface,
and the driver installation proggy. you have to format the hdd with it,
share the partitions, etc... and that's all.
aha, there's no power supply for the drive in the cartridge ;) so you
have to think about it.

2982. STATUS OF THING by the translator.

Newsgroup: comp.sys.atari.st
Date: 1996-05-16 00:00:00 UTC
From: Katherine L Ellis <kellis@mtholyoke.edu>
Message-ID: <Pine.ULT.3.91.960516161034.3998D-100000@mhc.mtholyoke.edu>
Source record: 145096

Hello everybody,

From the time I translated Thing into english, I've been reading
and observing different opinions on the subject of translating shareware.
I've been contacted by many people regarding the moral issue of my
translation, and I have answered to many congratulations and many
critiques. What's done is done, but I would like once and for all to
state my views on the status of Thing.
Firstly, let me address the "author question". True, I should
have asked the author first, and will do so before I do any more
translations. However, my first priority was to translate for myself so
that I could explore Thing. I then asked people if an english Thing
would interest anybody, especially those who were facing the same
linguistic problems as I did. I had numerous responses so I decided to
put Thing.eng JUST on my homepage, contrary to what many people think.
BTW, I have yet to hear from the author himself. Joe Connor sent me a
message saying to wait for a word from the author...well I'm still
waiting.
Secondly, the translation of Thing that I put on my homepage still
had two or three dialogue boxes that were in German. I have since then
corrected them (in English) and thoroughly tested it to make sure there
were no bugs (there aren't any, even in my first version), but have not
put the complete translation on my page because Joe Connor asked me not
to. So I respected his wish, but I admit that I did not remove the first
Thing.eng because I'm still waiting for the author to get in touch. The
dialogue boxes were overlooked because I did this translation in 2 days.
Joe Connor told me that Thing.1 was a beta version and that he was
waiting for the author's go ahead to translate. What boggles me is that
he also indicated that if an english-speaking user wished to register, he
would receive an english version of Thing.1. This must mean that the
program has already been translated, so why isn't this same translation
(disabled options, of course) offered as shareware on the Net. Who's
going to buy something that they don't understand or even know if they
need? Isn't that the whole point of shareware, a kind of pre-screening of
software?
The problem is that this particular shareware was posted in
countries other than Germany, but the program remained to be in german.
This is not just a battle between english and german speakers. It
shouldn't be a battle at all. Joe Connor's job is the only one that's
threatened by all of this, not the author. I read a posting about an
italian guy who wanted to translate Thing, contacted the author, and the
author said no problem whatsoever. The author doesn't seem to make a big
deal of translations (he hasn't even sent me anything regarding mine);
Joe Connor is the one who is upset, because I accomplished his job before

he did. I excuse myself to Joe Connor; I didn't realize the complications of it and certainly didn't want to override his position in the advancement of Thing.1.
Thing.1 is a great software, and I too hope that the new author will make it even better, if it's possible. However, for everyone out there in the Atari world, THIS SHOULD NOT BECOME A POLITICAL WAR. All of this talk over the status of Thing.1 disheartens me. Some of the comments I've read are absolutely ridiculous and attack on a personal level rather than sticking to the issue at hand. Keeping in mind the present situation of Atari, we as Atari users should not be belittleing each other, especially on culture issues, but rather help each other and remain unified under our common interest: TOS computing.
This is all I have to say about that. K.Ellis

That shouldn't present any problems at all.

Just make sure that your SCSI-interface handles parity, since some doesn't
(most early interfaces).

> I need to transfer some files from my pc tto my Falcon. Is it
> possible to connect the two somehow to transfer files?
>

This comes up so often, it should be in a FAQ !

Are there too many files to fit on a HD disk, because the Falcon can read PC HD disks ?

If there are too many, or you want to do this on a regular basis, get GHOSTLINK from umich. This prog will allow a serial connection (PC <=> Falcon) to transfer files.

It does this by allowing the Falcon to access the PC's hard & floppy drives; setting these up as regular Falcon desktop drives.

It can be a bit slow, but you might be able to get 115 Kb on a Falcon.

Disclaimer: I got this working, STFM<=>PC, I don't have a Falcon, but it should work.

VERY bad idea! TOS 1.4 is NOT PD or shareware! I'm sure that in this wide world there is somewhere an Atari dealer that has an official chip set of TOS 1.4 for sale! I assume that you are lonely and want to have lots of e-mail in your inbox! Cause talking about pirating the TOS ROMs can get you FLAMED crispy! You might want to contact the makers of MagiC and ask them if you can put their software on eproms, after you buy it of course!

2990. CDROM Gurus, please help

Newsgroup: comp.sys.atari.st
Date: 1996-05-16 00:00:00 UTC
From: Dennis Remmer <dennis@dstc.edu.au>
Message-ID: <319A79CE.41C6@dstc.edu.au>
Source record: 145104

Hi There

I've recently acquired an external SCSI CDROM, a Digital RRD42
model, and have been trying to configure it to co-exist with
my Atari setup. I'm using an ICD SCSI Link with an external Rodime
20Mb drive. My startup includes Warp9, Fatspeed, the ICD
Metados (configured correctly as far as I can tell), control panel
and such. I'm also using Neodesk on TOS 1.2. Did I mention I
was using a 1040STFM...

The ICD startup recognises the CDROM as an Adaptec device on
the correct SCSI address, and Metados is loading the
drivers accordingly, but when I click the drive icons I've
set up, a no-drive message appears. I then try to use one
of ICD's drive utilities to check the addresses, the device
no longer scans, i.e only the Rodime is listed.

Advice or experience please...

>lots of drivers etc.

As a system administrator for a number of large Solaris servers, I am well
aware of what Unix is! :^) And that's why I was so eager to find a SYSV
Unix for the Falcon, as I prefer that to BSD. If I can't run Atari's SYSV,
well, I'll just choose between Linux 68K and NetBSD.

>BTW, the sources for the Atari SVR4 are not available, of course. UniSoft,
>AT&T and Motorala have the copyright for them.

Yeah, I know SYSV source is not generally available, but it didn't hurt to
ask...

Anyway, thanks for providing the technical information, that's what I was
seeking. Now at least I know it's just not possible. :^(

Wow, was it really that easy?! There used to be two stores in the Denver area that carried it, Barnes & Noble and Newsland. I preferred going to B&N for a number of reasons, but when they stopped getting it I went to Newsland. When they stopped receiving new issues, I asked about it and was told that their supplier didn't stock it any more. :^(But if I could get B&N to resume carrying it... I'll let you know if I'm successful!

2995. Easy SH204/5 Harddisk Upgrade !!

Newsgroup: comp.sys.atari.st
Date: 1996-05-17 00:00:00 UTC
From: etwald@knoware.nl
Message-ID: <4ni9hq$rlm@news.knoware.nl>
Source record: 144959

Hi all,

I've got a really nice tip for people that have an Atari SH204/205 / MegaFile. (maybe other Atari Harddisks too). These Atari Harddisks have a 20MB Drive built in. This is a STANDARD MFM Hard Disk (used in all the old types of IBM Compatibles, XT and 286).

If your remove the old 20MB, you can install a much bigger (and FASTER) 40MB / 80 MB, etc. harddisk you just removed from your old AT / XT...

Nice tip, isn't it ? (Or am I just telling something everybody already knew ?)

I did it myself. I installed a 40MB drive, 28ms in my SH204. At first it had a 20MB drive, 60ms (or even more). So this resulted in a major performance increase.

The only problem you can have is the formatting / partitioning of the drive. You'll have to edit the WINCAP file that is included with AHDI.. Once you have done this, the drive can easily be partitioned and formatted...

E-Mail me if you don't understand how to do this...

CU,

Etwald Goes
etwald@knoware.nl

>Etwald Goes
>etwald@knoware.nl

This is Etwald Goes again :

OK. I think I'll just have to buy a new version. I also got a tip I'd
better upgrade to version 2.6. How costy is this in America ? In the
Netherlands I have to pay the TOS 2.6 ROMs and a special convertor
board (2 chips roms instead of 6 chips roms). This will cost me about
$125. How much does this cost in America ?

Is it BTW also illegal if I program my own registered version of
KaOSDesk or Gemini in EPROM (It's just a medium) ?

CU,

Etwald Goes

Hi there,
I have found a cheat/bug in Frontier which allows heaps of cargo space....

What you do is buy some rubbish then press the jettison button that would be below it if you had some other stuff, then you should jettison 1 ton of water which you don't have and bingo! you have one more tonne of cargo space.....

Warning: You have to keep an eye on your hull condition as sometimes the crates damage your hull.

I have a save game with a fully equipped Viper Defence Craft.....

Large Plasma Accelerator
Class 7 Hyperdrive (150+ Light years)
900 Shield generator units
100 Cabins
Every upgrade that a Viper can have except the mining machines
4 Naval Missiles
20 million + credits

If people want me to, I'll UUENCODE it and upload it as a reply to this thread.

3004. Help! NVDI4 problems

Newsgroup: comp.sys.atari.st
Date: 1996-05-17 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4nio9s$qv8@madeline.INS.CWRU.Edu>
Source record: 144968

Well, on the advice of many others I popped the $100
for NVDI4. It seems incompatible with almost everything!
First, I had to disable the disk□ cache in the ICD
disk driver. Now it boots one out of three times.
I can't rearrange the autofolder easily, cause autofolder
bombs. I can't run connect, cause it bombs.
Does it work with anything? :-(

Does anyone have any advice?
I have a TT4+4.

|Thomas Ferreira

I wish you well, but I have to be honest.. I doubt a new printed Atari magazine could be successful in North America or anywhere else in the world. The "Atari Market" just isn't there anymore. Only the few die-hards and the curious are left. Everyone else has moved on to PCs or Macintosh.

Sure, there are people who will flame me for this response. They will say that there are developments going on in Europe and that other companies have picked up the torch that Atari has dropped. And they may be right. However, when you look at what the market looks like from the outside, its bad.

There are a few people making money with Atari products. Only a few. And they aren't selling enough product to sustain your magazine business.

I urge you to turn off your passion for Atari and think about this idea in terms of a business. What is your business plan? How many subscribers do you need to be successful? Who is going to write for your magazine? How are you going to pay them? How long will it take for your business to turn a profit?

I think if you sit down and honestly answer these questions, I think you will find that a new Atari based print magazine just doesn't make good business sense. However, if you are looking to do this because of your passion for Atari products and you want to have fun (and you have no desire to turn a profit or break even for that matter), then go for it.

-- John Townsend
Former Atari OS Engineer
(and long time owner of Atari products (can you say Atari 400?))

PS. If any of my old friends from the Atari world read this and would like to chat.. drop me a line at towns@best.com. I would love to hear what you are up to!

>I have 2.5 Meg of internal RAM, but can't seem to get any further. Any ideas?
>
>Simon
>

I'm not sure but if nothing else so far has worked you may want to
try this out:

It seems from the above you only have 2.5Megs RAM, and as someone else
suggested Speedo wants ~2Megs. My theory could be that you are using
RAM for other programs, and so not leaving enough for Speedo.

Assuming Speedo needs 2Megs, that only leaves you with 0.5Megs for CAB
(which I think needs 1Meg) so its gonna be tight anyways.

What I think possibly might be causing the problem is the buffer
setting setup, by the original user, who may have had a 4Meg machine.

See if you can find the original install program, or the general setup
program (might be one of those 2 driver or outline apps) and loading
them up, and looking through them a bit and see what sort of settings
have been made for buffers etc.

Also try uninstalling one or two fonts here and there, save a bit more
memory too.

It just seems to me that if you've got the stuff setup right, and you
have no conflicts (ie. you've tried only booting with speedo, no other
autos or da's) then its a memory problem, and could be caused by the
buffers set by the previous user

The actual program name is STonX, as in ST on X windows, and is
indeed for use on a PC using a Un*x operating system, such as Linux.

If you are going to look around for it try searching for STonX on one
of the Web Searchers around... and see what it turns up :)

3014. Slow baud rate

Newsgroup: comp.sys.atari.st
Date: 1996-05-17 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <832451514_OASIS_@phil4.demon.co.uk>
Source record: 144978

A friend is having problems with his old modem, anyone got any ideas
???

He's using an old 2400bps modem to get set up on a couple of BBS's
including 42BBS and Ad Lib BBS, however even when Vanterm 4 is set to
2400bps, and his Serial port is also set to this speed, he always gets
a very slow connection of 300bps :(

I think this might be down to the modem trying to negotiate a slower
speed, any ideas ???

At the moment he's using the modem with a Falcon030, and has Fpatch 2
in the auto folder, and is using Vanterm 4

The port is set to 2400bps, 8bits, 1 stop bit, no parity, and RTS/CTS
flow control.

He is intending to get a faster modem, should the BBS provide the
services he needs, and it proves to be fun, he's only using this slow
modem as a tester, before forking out cash on something faster.

Any suggestions gratefully recieved.

Thanks in Advance

3015. Screen Width

Newsgroup: comp.sys.atari.st
Date: 1996-05-17 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <829769018_OASIS_@phil4.demon.co.uk>
Source record: 144979

Is everyone posting to this group nowadays using horizontal res
greater than 640pixels ??

As you can probably tell from the header (see X-Newsreader line) I'm
using OASIS on my Atari, and at the moment in High Res, 640*400,
however I am increasingly finding that the right hand edge of people's
articles is being 'chopped' off.

This would be fine it I had the right size screen, but to be honest it
stops the news being readable, I have to stop reading, scroll the
article to the right, and then scroll it back again... only a minor
gripe, but a pain all the same.

As a plea from me, could people using screen widths greater than
640*400 please reformat their articles, so in general they mostly fit
onto the screen ???

Many Thanks

> to have parity checking on. It should work.
>
>>>>
Let's get one thing straight. On ICD host Adaptors that
support parity, it, the adaptor, only sends correct parity on all outputs.
On Reads, Inputs, it discards the parity bit. The Adaptor does not
check parity in Inputs. So, it doesn't matter if the Parity on your
Hard disk is enabled or disabled. On the ZIP drive, parity can not
be disabled.
Another thing about the ZIP Drive: It can only be set to
use Device number (Not sure on this) 4 and 5 or 5 and 6. I'm not
sure which is the correct 2 possibilities. It can NOT be set to use
device numbers 0 thru 3.

Just trying to make things clear; Rich Mier

No, this won't be sufficient. The full sequence is in the below file.
Just print it from the Desktop before using any application software. This will
have to be done in every session, since the HP printers don't have any
non-volatile memory to remember their settings (unlike the new Canon printers
that also don't have any user adjustment or operating features directly on the
printer - everything's software controlled now).

bye, Peter

From: SNAP347@gnn.com
Message-ID: <4niska$2a4@news-e2b.gnn.com>
Source record: 144988

Okay, I'm a virgin to the 16/32 bit Atari game. I got a
TT030 a few month ago and I am having quite a bit of problems that
no one else can give me a very straight answer on.

First off let me say only about 50% of my TT030 software will
work. Most of the commerical software will work, but not all of
it. (most of the software I have is just ST stuff).

Problems:
SHAREWARE
- Llamatron
- screen turns red and locks up.
- Ultimate Arena
- TOS error 098

I won't share the rest of the problems with you people and waste
more of your time, but I have tried a program that converts 32-bit
to 24-bit and it only got one more program to work.

I hope it isn't my host (ICD LINK I), but the drive some how doesn't work
anymore. I tried reformatting it and it won't do anything and I even use
the Atari AHDI disk that came with it. I then figured might as well try
the old Link software that came with my LINK I and no luck there either.
If you can help it would be greatly appreciated.

>> Wrong. They say it is, but in fact the program with
>> the active window as always the greatest priority - even if it is
>> a screensaver! - and as all the CPU time... So it is in fact single task...
```

It is pre-emptive, it is not adaptive. Taskswitching is where only one program can run at a time. However, under windows, the foreground program has one size of timeslice, and the background programs have another size of timeslice. In MTOS the OS looks at how much power the program is using, and adjusts this itself, and the user can also adjust the speed of each program individually. In Windows, each program has a set amount of processor time. Windows doesn't really compare, though. I'm using a 33Mhz 486 - supposedly the equivalent of a 68040, and my ST is just as fast. If I had Magic it would be lots faster. My only regret about having an ST is the games that are available for the PC aren't available for the ST, and hardware prices are less for PC's. If you buy mail order (look in Micromart in the UK) you can buy a 500Mb HD for about £100.

Are there any programs to translate hypertext to plain ascii?
There are a number of German texts in Hypertext for
st-guide in German I would like to translate to English
with Ruftrade.☐, and then back to st-g format. Are there any programs to do this? I understand there was an old one called stg2asc.
anyone know where or how??

3032. Oasis2

Newsgroup: comp.sys.atari.st
Date: 1996-05-17 00:00:00 UTC
From: dickie@mistral.co.uk
Message-ID: <832293680_OASIS_NEWS@mistral.co.uk>
Source record: 145027

I downloaded Oasis 2.01 today, and have found that a number of bugs have been fixed apparently, the mailbox doesnt bomb out when I expire selected mail for instance, and ICE does seem as claimed to run a bit faster. News is working 100 percent now, and using all the features that Oasis2 has to offer in this area is a joy. Mail sending also 100 per cent, only POP3 mail receive continues to be a hit and miss affair. It always logs on and begins to retrieve without problem, but often chokes. Looking at the mail logs has revealed no common pattern and Ive spent a few "happy hours" now experimenting in my ham-fisted " a little knowledge is a dangerous thing" way, only to come up with nothing. BTW I read in the docs about packet life being set at 8 seconds internal and 64 seconds external or somesuch, so howcome when I ping an address (which is presumably offline at the time) I get a message in the viewer after less than 1 second saying
ICMP Packet Life exceeded. Have I hit on something? Is this normal? Technical explanation required please. FTP is working but is also a little fragile, locking up sometimes when retrieving directories. I dont like the way the window operates on FTP, and I wish I could see the file dates on the remote server, always a good indication of recent updates. Some of the other bugs I have found in Oasis I know are already being fixed in upcoming 2.02, so are not worth going into. It's going to be very good in the end, though.
Richard

I'll start by covering my back as I haven't yet tried my 660c on my
Atari, only my PC, so I may well be talking rubbish! <g> The 660 uses
either a Windows control-panel or a DOS version to set its defaults. Your
simplest solution would be to pester a PC-owning friend to run the HP
software and modify the defaults on your printer. Otherwise, I guess
you'll have to try and find the control codes for changing the paper
sizes. At a guess it's set to US letter.

You don't actually need a start-up disk for the STE as the operating
system is held in the ROM. If you just turn it on without a disk it will
boot up without any problems.
Do you have any idea what was on the start-up disk. What was it
labelled?

Up until now, I've bee using Oasis 1.35 & Nosshell.

When testing Oasis 2 and ICE, the following problems are occurring:

1. When starting ICE from the Oasis toolbox I get
two bombs when I use NVDI 3.0

2. My Internet provider requires that I send a 'return'
after connect is complete.
How do I achieve that?
I tried r: _____________
s: \n___________
The line is just deleted, so the log on never occurs.

By the way my machine is a MEGA STE 4MB

How do I go about this?

Well I use Freedom with Kandinsky, and have no problems whatsoever! I'm currently using V2, but V1.7 worked fine as well (version numbers of Kandinsky that it - my Freedom is 1.16 I think). In fact it's a great combination, since you can drag stuff from Freedom into a Kandinsky window, etc., etc.

As for the #EXCLUDE line, I've never had to use it, but I would guess that you need the full name of the app (including the extender) - probably ;)

Cheers,

Xav

If you've ever used WIN95, it's similar to the "My Computer" icon, in that (in theory at least) _everything_ is accessible from drive U:

Basically it is present to allow the ST to use Unix like filesystems, where hardware is represented as files in various folders off a root (/ on unix u:/ (or u:\) on Atari). It may not seem to be an obvious advantage, but it does help to let a lot of Unix stuff run, if it's set up correctly. Also you can do stuff like sending files to a printer (or RS232 port, or MIDI port...) by dragging them onto the relevant file in /dev.

Similarly all applications that are running are shown in /proc and you can kill them by deleting the file (something I've had to do more than once in order to regain control of my machine). Lastly, all drives are shown as folders in U: - i.e. u:/a/ u:/b/ which means that you can access them all from one icon ;) Apart from a few essential apps, all I have on my desktop is drive u: a dustbin and a printer.

Cheers,

Xav

Replay 16 (from HiSoft) will handle MIDI sample dump standard. It's a slow way of transferring files, but it works with most newish samplers. I don't know about the s2000 specifically, but i would think it can handle this.

A friend of mine used to use a Peavey sampler (only the sampler, no replay stuff) send the sample to his ST, edit it in replay, then send it to his Yamaha SY99 for playback. A bit clumsy, but the ability to use a full screen editor on the ST made it worthwhile.

>1)what speed should the STe be able to use?

I'm pretty sure that the minimum is 70 nanoseconds and that's the common
speed also used in PC's.

>2)Can the STe work off of just 1 1mb x 8 simm?

I don't think so. They were usually supplied with 4 x 256's.

>3)Is it possible to use 4mb x 8 simms ?

No. The memory management unit can't address more than 4 Mbytes.

>4)is there a specific 1mb x 8, 30 pin simm that I should be using?

No. They come in 9 chip (with parity) and 8 chip (non parity) forms as
PC's vary in their need for this. The Atari doesn't care.

>5)Are all 1mb x 8,30 pin simms all the same??

Effectively, yes, provided the speed is high enough.

Chris Gentry wrote:
>
> I need to transfer some files from my pc tto my Falcon. Is it
> possible to connect the two somehow to transfer files?

If you're running MinT (i.e. Multitos) all you need is MinTNet and NFS.XFS. Then you need a NFS Server for your PC (easiest way is using a UNIX Clone, but ther should be some Windoofs and OS/2 solutions as well). Then you plug a serial connection between the two and put them up whith most speed you can get out of it (try HSModem on tha Atari side). This should be faster than Ghostlink or anything similar.
For this case the more modern PPP should be used instead of the slightly archaic SliP. You will get a very stable and safe conection. If you don't need to acces full directories on your PC then a FTP Server on the PC and a FTP Client (DUFTP for GUI Freaks and any Unix stuff for others) on the Falcon will do. This should be faster than NFS, but it is not that comfortable. NFS can mount any PC drive ond any directory on it in the MinT Directory U:\NFS\. Then you can use ln -s to mount it on any MinixFS Directory etc.
As you see you can insert your PC drives almost anywhere in the Atari Filesystem whithout wasting the own Disk space. FTP can just transfere files from one system to the other. this is usefull, inf you whant to use something like adisk drive on the PC to copy the information on your Drive.

3046. Dip switches on sys solutions TT fast ram board settings?

Newsgroup: comp.sys.atari.st
Date: 1996-05-17 00:00:00 UTC
From: "Dr. Simon G.K. Williams" <williamssg@cf.ac.uk>
Message-ID: <DrJs5E.Jy9@cf.ac.uk>
Source record: 145041

Hi all,
I have a TT fast ram board installed, obtained from Systems solutions. It has 8 30-pin SIMM slots, arranged as two columns of 4 slots. There is a 6-way dip switch on the top left of the board (looking from the front of the TT). Currently I have 16MB installed, as 4 4MB simms. These are plugged into slots 1 & 3, and slots 5 & 7 (i.e. slot 1-4 is left side with 4 at the front, slots 5-8 on right side with 8 at the front).
I would like to know what the settings on the dip switches are, for different memory configurations, e.g. 2x4MB, 8x4MB, 2x8MB and so on. At the moment, for my config (16MB), dips 2 and 6 are on, the others are set off. Does anyone know the settings?

Firstly, you would need to get an ICD Host Adapter, and then get
a SCSI Zip drive. Make sure that the Zip drive is the last device
in the SCSI chain, and make sure (if your hard drive supports it)
to have parity checking on. It should work.

From: josk@stud.unit.no
Message-ID: <4nie5f$6bf@due.unit.no>
Source record: 145048

Hi!

I have a dynamic SLIP/PPP-account and can't get Oasis2/ICE to recognise the
IP-address assigned to me.

When I start SLIP I get the following response:

...your IP address is xxx.xxx.xxx.xxx. System...

My dial-script looks like this:

```
Username: myusername
Password: mypassword
melvin> slip default
address is $GET_IP
System
```

Could it be the full stop after the address that's causing the trouble? STiK
connects fine, but ICE gives me 255.255.255.255 as my IP-address...

I have had this message posted online for a week or so and have had a good amount of responses. If you have not responded so far my email about your ideas and thoughts of this new magazine, THEN I WANT TO HEAR FROM YOU.

I wish to hear your ideas and responses. Do you want to keep the Atari platform ALIVE and WELL?? Then respond and be heard. I want this magazine to happen for me, for you, for advertisers, and for all computer enthusiasts. This Atari platform is FUN and we have years of life left right now if we all work together. You never know, if we keep the ball rolling long enough, someone or some company may bring back the Atari concept! Would it not be great if someone acquired the rights to say the never release ST BOOK notebook that Atari was producing and revamp slightly for todays market!! I would buy one for sure.

Anyway, I want to hear from you and need the further data to get the magazine going. EMAIL TODAY!!!!!

Original Letter below......

Hello there folks! I am doing a little research and thought the newsgroups would be a great place to start. I have been toying with the idea for years to produce an Atari based magazine and would like to get some feedback from all you Atarians out there.

Here in North America we do have (2) very fine Atari based magazines; Atari ST Informer from USA and Current Notes from Canada. I want to feel the waters and see if the current market would receive well a new and fresh look at an Atari based magazine.

I have many very good, fun, and new ideas for this Atari magazine and am almost to the point of jumping aboard and joining the Atari magazine crowd. This magazine will mostly cater to the Atari computer line but will have some info for the gamers at heart.

If you are one that currently subscribes to other Atari magazines and would most likey subscribe to a new magazine, I WANT TO HEAR FROM YOU!!

Please email me at:

tj@godfather.com

Just let me know your thoughts and if you truly believe you would be a potential subscriber.

Thanks for help and look forward to many many responses. I would also love to hear from other Atari based magazines on there ideas and insights of the Atari magazine market.

Thanks Again!!!!

Thomas Ferreira

3059. Re: Oasis2: a dial-script problem

Newsgroup: comp.sys.atari.st
Date: 1996-05-17 00:00:00 UTC
From: thietavu@news.abo.fi
Message-ID: <4nhhri$ksa@josie.abo.fi>
Source record: 145054

Hi!

The dialling script in Oasis 2 seems to (?) expect some message from the net-server - and only after something like "login:" does it send its own messages. My net-server, however, expects to FIRST see a couple of "returns", before it wants to send Oasis any message. So, my question: how do I modify the dialling script so that BEFORE any other things start to happen, Oasis would send a couple of "returns" to wake the server up?

There must be a simple solution, I just haven't found it yet ;-(... Thanks for help!

Tommi

Btw. Oasis does look like a mighty package - I'm looking forward to trying it online =) !

>
>I guess it's a little hard to explain the problem. If you understand
>this problem I would truly appreciate any help you could offer.

Strange... sounds very familiar. I get this problem every now and
again, when quiting certain programs... I've always found loading the
program again cured the problem.

The real strange thing is that the problem occurs on high res, on my
MegaSTE.... not a falcon, and certainly now BlowupFX board in sight
!!!

AFAIR there was a patch fix around somewhere for this, but it hardly
ever crops up so I haven't bothered to get the problem.

If anyone knows the cause of the problem I'd like to know what it is,
as a stab in the dark though I'd guess its something to do with the
physical screen, not being aligned to where the data is actually being
written, and so the screen is shifted to the right ??? just a wild
guess !

ATb.

3062. Modem Binary Transfer Protocol

Newsgroup: comp.sys.atari.st
Date: 1996-05-18 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <829658356_OASIS_@phil4.demon.co.uk>
Source record: 144857

Does anyone know where I can find details on Modem Transfer Protocols,
such Xmodem, Ymodem, Zmodem, Kermit etc. etc. Such as how and what.

I'm just thinking about writing a transfer program (just for the hel
of it), and was wondering if anyone knew where this sort of data could
be found.

BTW: as I'm not gonna be using the info for making my millions, the
cheapest data would be best (eg. WWW page, FTP site etc.)

Thanks in advance.

I am considering moving up from my Mega to a Falcon, and
I'd be interested to know if the following would run, or if at
least they would under a ST emulator like Backwards:

Dr T's XoR
Dr T's KCS
Steinberg-Jones Avalon

Thanks in advance

Gustavo

3064. Re: Atari 1040STF or Atari1040STFM?????

Newsgroup: comp.sys.atari.st
Date: 1996-05-18 00:00:00 UTC
From: Magic Mandrake <100550.3170@CompuServe.COM>
Message-ID: <4nk52d$cv1$4@mhadf.production.compuserve.com>
Source record: 144859

Robin,

The STF does not have a built-in TV modulation unit.

I have had an STF since May '88 and utilised the SCART connector to a SCART TV to for games/colour. I did buy an old external Modulator at a hi price considering the antiquity of the technology, for use in recording images (ie. a video) to Video tape to then over track my MIDI music.

I too would like to be *More* portable with MIDI but now I have an A5 sized Sharp PC3100 Palmtop. This is an IBM (!) XT DOS 3.3 with PC Cards for disks but can run Cakewak for DOS 4 with the aid of an external MIDI unit on it's parallel port. Just stick it in your pocket, pick up your module and amp and you're off!

I use the Atari for the main creation though.

Hope this helps!

Mark

>>
>
> As you are using an STe turn of the on-screen clock using the General
>Details dialog in ICE_NET and things should run smoother,
>
> TTFN
>

I'm getting exactly the same problem as above, I've tried turning off
the on-screen clock, but still no joy.

I also have a 4Mb Mega Ste, TOS 2.06. I have disabled all auto folder
programs and accs except hsmodem and xcontrol. I have a 28.8K modem
connected to modem 2 (with the modem cpx set accordingly), I have
tried different speed settings, moved the modem to modem 1, and even
tried changing the hard disk driver in case that was causing a
problem.

All that happens when I try to log on is the dialler window appears,
and the program seems to lock up, requring a reset. This happens if I
try to log on from within Oasis 2, or if I start Ice from the desktop,
or if I use low_mem.prg. This still happens now that I am trying to
use version 2.01, so I am wondering if there is something very
fundamental I have cocked up.

Any suggestions???

Dropping one of those (Pentium 166) from a great height onto the head of the person who created the "can't save desktop in Medium rez" bug in TOS 1.06 would be the way to go.

"TOO ULTIMATE".

Come to think of it, just dropping the Pentiums from a great height for no good reason would be even better!

Source record: 144865

```
>> I recently purchased a STe with out any ram I know that it takes 1mb x
>> 8,
>> 30 pin simms.Will it work with just one of these simms or does it take
>> two to of them giving you 2mb.What chips do I use if I just want 1mb.?

The STE always needs an even number of simms. 2mb is obtained from 2 *
1MB. If you just want 1mb then 4*256k is required. You might find that
you can get 256K simms very cheaply as whenever anybody upgrades from 1mb
to 2 mb they are left with 4*256K simms which they can't use.

Hope this helps.
David James

3075. Japanese for Atari St/Problems with Pc-Speed

Newsgroup: comp.sys.atari.st
Date: 1996-05-18 00:00:00 UTC
From: chimdjgh@hydra.zrz.TU-Berlin.DE
Message-ID: <4nks6g$1sc@brachio.zrz.TU-Berlin.DE>
Source record: 144870

es anybody know how the japanese Kanji Word-processor MOKE

can be used on an Atari-ST computer with PC-Speed?

My Version of PC-Speed (probably an old maybe corrupted driver 1.4)

does not work. In hercules or cga-mode it breaks down immediatly

after the message "Reading Dictionary".

It's probably the switch to Graphic?

Any Hints would be great. Where to get a newer PC-Speed driver?

Or does anybody know a Japanese Word-processor for a real Atari-St

(exept worduta Version 1.)??

I just need one to process simple JIS or EUC Code.

I heard there maybe one for the AMIGA? Why not for

the great and unforgettable Atari-St?

Thanks for reading.

Christoph Chi

John Townson has given some very sound advise in a very respectfully manner... but I have to say this... just about ever big company had a person like John to bring reality as we think we know it at the moment. When I think of business of the past I beleave people had dougts that Barry Gordy's Motown record label could ever amount to something. Bill Cosby was a drop out I heard. I don't know if that's true or not but all I know is nothing beats a failure but a try.

Here's a real live Example... me. When I tried to get on line providers said I was unable to do it with an Atari... Here I am. They said I couldn't produce a web site... it's here. I couldn't run my business with it... I am and it's growing everyday.

The only thing I have to say is don't give up so easy. Nothing comes easy but after 50 or 60 years later if it doesn't work maybe it's time to make some changes, but never quit or give up on a great thing.

Just a couple of pennies in the wishing well of the NET!

3079. Re: STE ???

Newsgroup: comp.sys.atari.st
Date: 1996-05-18 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <5RHthPm.lmcclure@delphi.com>
Source record: 144874

Answers to your questions:
-
1) Anything 150ns or faster should work fine. (Translation: don't worry about the speed of the SIMMs, as most any you find nowadays will be rated at 120ns, 100ns or 80ns or faster).
2) No, the STe can not work off a single SIMM. 30-pin SIMMs are 8-bits wide, and the STe uses a 16-bit data path. SIMMs must be installed in pairs. If you want only 1 megabyte, use four 256K SIMMs (which is what 1040STe's originally shipped with). Although you would be better off with two 1meg SIMMs, you should be able to find 256K SIMMs at near-giveaway prices.
3) The STe's MMU is set up to handle only 4 megabytes of memory max, so even if 4Mb x 8 SIMMs worked, you would not gain anything from using them.
4) No specific 1Mb x 8 SIMM is required. I have used 1Mb x 9 SIMMs and 1Mb x 8 SIMMs in my STe at various times. The three chip and two-chip versions of these same size SIMMs work as well, in my experience, although it has been advised no to mix different types or speeds (at least within the same bank...I had no problem using 80ns 8-chip SIMMs in one bank and 70ns 3-chip SIMMs in the other).
5) No, not all 1Mb x 8 SIMMs are the same, but as detailed in #4, all should work just fine in an STe.

```
Oasis Report - D.M.Brewood - Updated: 18/05/96 # 033 (posted to
====================================================== testers)

Comment list posted to the following official beta testers:

Colin Bernau (colbee@tyndale.apana.org.au)
David Greenhough (green@spirit.demon.co.uk)
Ron Keen (beta@gaiasys.demon.co.uk)
Neil Martin (Neil@yr-ynys.compulink.co.uk)
Gary Priest (gary@the-gap.demon.co.uk)
Dave Levi (Dave@levihome.demon.co.uk)
Phil Yeadon (Phil@yeadontt.demon.co.uk)

Test Machine: Falcon 030 running MagiC4 with Thing, operating in 1024 x
768 x 16 colours.

This comment list will also be posted in the NeST N.SUP.OASIS_ICE
message echo on a weekly basis.

This data is based on the beta version(s) provided on:

ICE = 17th of May.
OASIS2 = 17th of May.

Package 2.01 is the last release version.
Package 2.02 will be the next release which is in beta test (various
stages).

New in ICE since the first official OASIS2 release:
==================================================

2.01

- More TCP routines in machine code.
- Ftp bug fixed.
- Socket and Directory windows seperated.
- Debug q removed.
- ICE spead increased.
- News can now be sent without downloading news.

2.02

- IGNORE allowed in logon script to allow sending of multiple lines.
- IGNORE/n now supported (sends back a CR).
- ICE online clock disabled it the user runs on an (M)STe/ST-Book.
- IGNORE features expanded.
- Delay system implemented.
```

- Documentation updated.

New in OASIS2 since the first official OASIS2 release:
===

2.00

- Window re-draw routines completely recoded.

2.01

- More Redraw code modifications.
- Fix of Local Post bug.
- Documentation corrected.

2.02

- Problem with unregistered article headers fixed.
- Edit SIG problem fixed.
- When examining articles ready to post in the Internet window, after the
article is exited (using ESC) the initial window's contents are not
redrawn - fixed.
- When logging onto Demon with an existant HEAD.OUT file you no longer
get an error, the program now appends the data.
- Local Post bug with exit back to desktop may have been cured.
- GEMDOS seek error trapping added when posting a mail mime document
in the external editor.
- Inmail/Outmail flagging bug fixed.
- In the Outbound window the IP name is now shown in the same case as it
appears in the ICE.NET file.
- Redraw recoding completed.
- Postbox only saves when read state of an item changed.
- Table added into the OA_CODER.
- Documentation updated.
- New outgoing mail/news no longer overwrites existant mail/news items.

New in ICE_NET since the first official OASIS2 release:
===

2.01

- Changes made to HELP dialogues.

2.02

- Support for additional flags added.

List of possible bugs discovered in ICE so far:
===

- Fix packet CRC problems.
- Fix PPP packet bug where carrier drops.

List of possible bugs discovered in OASIS2:
===

- When 'New groups' is chosen the new groups are not added to the master listing as the process bombs out. The master listing appers to be lost but is still there as a backed up file.

- When expire mail in post box (marked items) is used sometimes gives two bombs and back to desktop but mail has been correctly deleted when oasis is started again.

- .BAD flaf not reset properly.

To-Do and Suggestion List:
==========

- Implement thread map for emails. [Will be implemented but after initial release]. [Phil]

- Update FROST to include: Use of full user names. [Dave/Daron/Phil]
: Implement ICE mail interface.

- Iconic control system for sending MIME multi-parts. [Phil]

- Implement stand alone Fronds (deamons):

- F.R.O.ST = Fidonet Reworked Operations ST. [Daron, Phil, & Dave]
- N.O.M.A.D = News Operation Moderation And Delivery (Moderation of newsgroups).
- P.A.L.M = Please Add Listed Mailshot (Mailing lists).
- C.A.M.E.L = Count And Manage Electoral Lists (Voting systems).
- = Autopost text file on a certain day each month

- Allow headers/messages to be selected via click and drag.
[Phil - maybe]

- When using the auto-locator when sending email messages it would be useful if a dialogue came up confirming the users name, and if more than one user shares that data (I have 4 Dave's in my yellow pages) then a selection dialogue should appear allowing you which user to select. This should just show the names available, not the full YPG's.
[Phil]

- Wanted: C include files for use with GFA MyDials dated 10/11/92; export.h & import.h [For Phil - obtained by Daron, awaiting feedback]

- Add in function key selection of the user. [Phil]

- Implement use of SHIFT HOME to move cursor to the bottom of the mail and news windows. [Phil]

- Add in skipping of newsgroups with unread mail similar to that used on the news headers. [Phil]

- Can dialogs be added in to OASIS2/ICE to support setting of the following to allow fine tuning? [Dave]

attach asy AUX: 0 ppp sl0 32767 1500 110
ip ttl 64

```
tcp mss 1460
tcp window 11680
tcp irtt 3000
tcp syndata on
ppp sl0 lcp local mru 1500
ppp sl0 lcp remote mru 1500
ppp sl0 lcp local accm 0x000a0000
```

- Clean exit to Oasis2 - it is bombs trap the error and set the time back to what it should be.

- In the Outbound window - Window header should change to show 'outbound'.

- With each release made of the program(s) include a HISTORY.TXT file detailing what has changed since the last release.

- Include sets of working log on examples for different providers in the package.

- Specifiy more than one pop number so if one pop is busy the next one on the list is used.

- When collecting e-mail alter status window so we can see who its from instead of who its to.

- Cursor selection of MIME items.

- Time / Datestamping of files.

- Show newsgroup file size in the Groups window.

- Support provider specific mail sending for those users with more than one IP account.

- User defined 'quotes' header for news/mail.

Qasis / Ice FAQ's
==========

- Q: Can icons be added to those already used (as seen within the toolbox)?
A: Yes - the TOOLS_LO.RSC and TOOLS_HI.RSC files may be edited to add additional icons.

- Q: Can the subject be changed when replying to messages?
A: No, this is not allowed according to the RFC's.

- Q: What causes error OASIS FILE ERROR I:\OASIS2\NEWS\ARTICLES, and how can it be corrected?
A: Try re-indexing the news group, sometimes the index gets corrupted by drive fragmentation from a lot of unbatching and expiring. If this fails, Wipe the group.

- Q: What do OASIS and ICE stand for?
A: OASIS = One Atari System Internet Software.

ICE = Internet Connection Extension.

- Q: How much is the registration fee for Oasis2 and ICE?
A: The registration fee is £30 pounds and gives a lifetimes
registration for OASISx, ICE, ICE_NET, and SPIDER.

- Q: If the email files get corrupted, how can this be fixed?
A: Delete the relevant .MIX file from the mail directory and when post
is selected the email will be reindexed.

- Q: I know that 'X-' reference lines may be added to the top of a
message manually to access things like Anon servers, but how can
these be added if for multi-part binary file transfers? Is it
possible?
A:

- Q: Why does my USR Sporster Vi not respond to the dialer?
A: For some reason the Sportster switches to numeric result codes when
accessed by ICE. Use ATZATV1 as your init string and it will solve
the problem.

- Q: Why does the redialer issue two ATZ's before dialing (giving redial
2,4,6,8 etc)

: bombs. I can't run connect, cause it bombs.
: Does it work with anything? :-(
:
: Does anyone have any advice?

Hi Boris,

I have no troubles at all, and I'm running both ICD and Connect. Make
sure NVDI is the first program to be executed in the AUTO folder. Maybe
NVDI doesn't like some of the other AUTO programs? Try disable all of
them except NVDI.

In article , collins@upanet.uleth.ca says...
>
>Does anyone know how to change people into tax collectors?
>In civilization'
>
Hi,
You have to make 'Entertainers' in the city first and then click on
an 'Entertainer' and it will change into a Tax Man (or a scientist)
and you can keep switching between the 3.
If the city has NO 'Special' People (entertainers,Tax Men, Scientists)
then click on a resource surrounding the city on the city map and it
will divert those resources to becoming a 'Special' person.
I hope this helps.

Like I said in my post, have a look at the pin spacing.

The 68030 in my TT has a PGA package with pin space of 0.1 inch,
The Falcon uses a 68030 in a surface mount package with pin space
of 0.025 inch.

> **
>
I had a MegaFile 30 go crap on me--it wouldn't do anything; tried running
AHDI from floppy, etc.,nothing.
Then I took it apart, and gave the motor shaft a little spin with my
finger; put it back together, and it worked!
Later, I was told all I had to do was lift the enclosure, and give it a
little quick jerky rotation, in one plane (keeping it level to the floor)
this accomplished the same as giving the drive a manual spin. I later had
one opportunity to give this method a try, and it works too.
Meanwhile, I had invested in a MiniScribe RLL 32Meg mech, on the advice
that when you have to do this to a harddrive, it's not gonna live much longer!
However, in the six months since the first crap-out, the drive has only
failed the one time, when the jerky rotation fixed it.
Hope you can be this lucky! I didn't lose ANY data! And I STILL don't have
everything backed up the way I should have!

I don't know of one myself, but RFC1036 says, "Any unrecognised headers are
allowed, and will be passed through unchanged."

I agree with you. There are many examples of people throughout the computer industry that provided innovation in the face of people who said it couldn't be done. If you disagree with me, then please.. go for it. Its possible that things could be successful. But, remember.. you are starting a business here. You have to think about things from a logical perspective. You can't let emotion overtake your views. Sure, emotion should play a part (I am a firm believer in doing what you want to do.. don't do something that you don't enjoy!), but don't let it overtake the decision completely.

In any case.. no matter what you decide, it will be a learning experience.

Good Luck!

The drive was pulled from my A1200 when I upgraded so It's already
formatted. You would have to change the screen mode. I assume you have a
cable.

If you're really interested I'll look into the shipping. Can you pay in
$US?

IIRC TOS 1.04 and Kaosdesk have already been blown into EPROMs, with official sanction and sold commercially. I think it was called EOS and had a TOS version of 1.41.

Can someone confirm that?

Okay ... - I wasn't able to find out that, cause it was not running at
all. It's partly running now and I saw the changes and surely there are
betterings compared to the old Oasis.

> Spider is getting under way in the next few days, it will basically be

Okay - but this certainly is a question of personal favour. I didn't find
istalling NOS very easy but at least managing it means to understand what
the program is about. And it allows you to put in some individual
configuration.

> OASIS 2 writes NOTHING to your hard drive that is hidden, there is also

>>STiK/CAB, UPOINT, NOS etc.
>
> Fine, everyone is entitled to there opinion, after all if we all agreed
>with each other the world would be a very boring place.

Do I hear a bit of aggression here? - Phil, I don't doubt that you and
some others certainly spent hard work on Oasis. What me really
disappointed was actual Oasis2 compared to all what was told about it
weeks and months before in this newsgroup. It was made a bit mysteriuos
and a sort of secret thing and so on ... - This was indeed a very goog
promotion campaign but - in my personal opinion - now it does not keep what

was sort of promised. And several other postings for me seem to underline that the release of Oasis 2 might have been a bit too early - and the promises/rumours may have been a bit too optimistic. (Allthough you might not be responsible for all that.)

The development of STiK/CAB during the last months was amazing. And the package now has reached a level where I'm getting more and more willing to pay for it. And I do like the fact, that is has been free so far without any limitations of time, features etc. - I might have a look at Oasis 2 later again, with spider included, some more bugs fixed etc. - Cause I don't want to be a "beta-tester" who is - through a time-limit - forced to spend shareware-money.

And to say it again: I recognize your work on Oasis 2! And it looks as if it could become a really usefull program. And if it will - I'll certainly spend some money for it.

>

Hi there,

g> I found with NVDI3 (I don't have 4) that it was well worth
g> experimenting with the auto folder order. There are some combinations
g> which have to be "just right". Install as few fonts as possible to

That's right, the order of programs in the Auto folder is a little bit critical. I didn't red your mail, only this quote here, did you make an upgrade or did you buy it new??
I have NVDI for al long time and only a few problems with it. I made an upgrade from 3.02 to 4.10 (you should have 4.10 or higher, there are some bugs fixed!) and there was no problem. It works with connect and with most of the programs I have. (I don't know another program with problems at the moment). NVDI has to be the first program in the Auto-folder (if you are working with MagiC!, NVDI is the secound!). If you had an older version on your harddisk, please delete the old NVDI-CPX's by hand and copy the new into the CPX-folder. Then it should work. In some cases it's neccessary to instal NVDI once again.

Ciao Mike

: disk driver. Now it boots one out of three times.
: I can't rearrange the autofolder easily, cause autofolder
: bombs. I can't run connect, cause it bombs.
: Does it work with anything? :-(

Weird... =(I use NVDI 4.11 on my Falcon - and it works just
perfectly. Even games like Civilization work - that one even
without having to use Backwards ST-emulator _at all_ ! Yes, I
can use Civ. in Fast-RAM, use 36..40 MHz CPU clock and 18..20 MHz
bus speed, and Civ. works perfectly when using NVDI 4.11. Without
it, the game doesn't run on Falcon - at least without a ST-emulator..

Connect works, as do all the other programs I've tried. So, the problem
is probably somewhere else. I suspect that ICD driver... Can you try
e.g. AHDI instead and see whether problems continue?

Best regards,
Tommi

The files have been 'tar'ed and then the result 'gzip'ped.

Find your local Unix machine or run Mint.

To unpack *.tgz you need two ttp: GZIP.TTP and TAR.TTP
First you must run GZIP.TTP. In the dialogbox just fill in

-d filename

This will unpack to *.t(ar)

Secondly run TAR.TTP

-x filename

BTW: if you place the ttp's in the same directory of the *.TGZ file
you don't need to fill in the full pathname.

I found with NVDI3 (I don't have 4) that it was well worth
experimenting with the auto folder order. There are some combinations
which have to be "just right". Install as few fonts as possible to
start with (vector ones seem much better than bitmaps). Also, some
experimentation with the CPX settings produce more stability. Since
doing the above I have had little problem with it.

> this is all that's left, I'd rather go back to this
> than use Oasis 1 or 2 ATM !

Nos is still at version 0.42. I find Oasis133 is pretty stable
provided I keep re-indexing and expiring news each day with zero or
one for the time delay.

>
>Off subject but, how about a PD Harddrive, Manager, etc, I'm using
>SDManage from Gastiener ATM but it's a bit cruddy!

So am I and SDManage is a bit archaic but the driver is reliable which
is what counts. It's much faster and more reliable since I've been
using MagiC.

gregor@shelly.goldengate.net (Bradley Maurer) said:-

>Which dearchiver do I use to decompress .Z files? and for that matter
>what exactly are .Z's--7 bit ASCII files?

Z files are GZIP files. If you look through Umich's index file you
should be able to find yourself a copy. If not email me and I'll find
you a copy.

Z files are compressed and grouped files, known as an archive. You
can take a collection of files, group them into one file, and compress
them down to make the files smaller. This saves when using a modem a
lot of time both in sending, and in making sure you've sent the right
files.

Other types of archive include, .ZIP .LZH .ARC .ZOO. LHA and a few
more as well.

If you are going to download a lot of differnet archived files, and
archive types it may be a good idea to get hold of the different
decompressing programs, so far I've got the following, and never
needed any others:

ARC, ARJ, GZIP, LHARC, TAR, ZIP and ZOO

And even more useful is a program called 2in1 which allows you to use
the same interface for all the different archive types, and make
things generally a lot lot easier.

>behind in at least one or two of the types it is supposed to support!

I've never had that problem, surely you can upgrade for instance STZip
without worrying about 2in1.

>Don't even suggest that I can put in the new commands by hand in 2for1! If

Do you really use all those commands ??? About the only two commands
that I ever use are to retain folers, and to deal with unix systems.

And as for ST archivers being updated rapidly, when was the last time
STZip was updated ???

>I was really up to that I would be using ttp's! I have 2 Syquests a 105M
>and a 135M, space on my hard drive is the least of my problems 8-)

The reason I use 2in1 is not to save drive space but to simplify my
usage, I only have to run one program to do my dearchiving, I only
have to familiarise myself with one shell type, sure they are all
similar and its not difficult to learn, but if you only use one
program its a lot faster.

> Don't stop at zoo files! Let do away with lzh also! Convert all
>of them to zip, so you don't have to remember to use the bin command
>before you FTP them!

I have never yet had a problem with downloading files, by default my
system has BIN set ON, so there is never a problem. Also I personally
prefer LZH to ZIP, for the simple reason that the ST version of LZH
actually lets you see how much it arhived/de-archoved as it goes
along... a bit of a strange reaason, but as far as I can tell ZIP is
only slightly better at compression, and then only on some file types.

>I have yet to run across a system that gets zips as
>text, but almost every I have used think that lzh, zoo, tos and prg
>extenders mean text and if you aren't careful you end up with a trashed
>file!

See above.

I think that replacing ZOO, ARJ, and ARC are all valid points (I'd
like to see .Z and TAR got rid of too, but there are programs like
Linux, NetBSD etc. for Ataris and so people use them).

But I think reducing everything to ZIP would cause problems as soon as
the odd stray file comes up, after all the only reason I keep a copy
of ARJ is because every now and again a file crops up that is archived
with it.

:
: i recently purchased a STe less ram.I now need to purchase ram to install
: into the STe.I know that the it takes 1mb x 8,30 pin simms.so heres my
: questions.
:
: 1)what speed should the STe be able to use?

My STE came with four simms installed; each was 1/4mb (ie 256kb).
Their speed was 120ns. Since then I have sustituted 70ns 1mb simms.
There was actually no point in using these faster simms but the
slower ones were not available any more.

: 2)Can the STe work off of just 1 1mb x 8 simm?

NO. There are four simm slots labelled 0,1,2 and 4 (I think). at least
slots 0 and 2 must be filled or all four slots must be filled.

: 3)Is it possible to use 4mb x 8 simms ?

You can but you will need an addaptor board.

: 4)is there a specific 1mb x 8, 30 pin simm that I should be using?

Anything equal to or faster than 120ns although it might be wise not
to mix the speeds.

It may also be possible to use 1mb x 9 simms. I think that the
extra parity bit is just ignored.

: 5)Are all 1mb x 8,30 pin simms all the same??

This will not work I'm afraid, there is no way that the printer can have its
default settings changed and then remember them the next time that it is
switched on :((

e> guess you'll have to try and find the control codes for changing the
e> paper sizes. At a guess it's set to US letter.
I've already posted the control codes to do this elsewhere, there is nothing
esoteric about them as they are the same as on other, earlier Deskjets, and
the control codes can be downloaded from HP's web site or even as (free)
faxes. The only sticking point is that there doesn't seem to be any way of
adjusting the colour registration against black.

I have the control codes for the 3 quality settings if anyone would like them
posted.

Speak to 'ya later!

d> I've recently acquired an external SCSI CDROM, a Digital RRD42
d> model, and have been trying to configure it to co-exist with
Ahhh no!!!!

This rather ancient device is a single speed, single session caddy loading drive. I tried to set one up quite some time ago and failed miserably. I was informed it didn't implement SCSI fully and depended on a special SCSI implementation provided by the DEC machines they came with.

I have since proved this wrong as I managed to get it working on my PC using an Adaptec controller, but the lack of speed and multisession drove me mad!

I never did manage to get it working on the Atari.

d> The ICD startup recognises the CDROM as an Adaptec device on
Does it recognise it as say an Adaptec 4040/something or other??? If it is something along these lines then I believe the drive isn't returning a proper SCSI ident (possibly due to its funny SCSI implementation).

d> set up, a no-drive message appears. I then try to use one
d> of ICD's drive utilities to check the addresses, the device
d> no longer scans, i.e only the Rodime is listed.
I would pass it onto a deserving PC owner who may have better luck than yourself. I'm not saying it cannot be made to work, only despite everything I tried I never did manage to get it working on the Atari!

3126. OASIS II, the final straw...

Newsgroup: comp.sys.atari.st
Date: 1996-05-19 00:00:00 UTC
From: paz@wile.demon.co.uk
Message-ID: <832599092_OASIS_@wile.demon.co.uk>
Source record: 144911

Well, I could have put up with the fact that ICE was slower than NOS (I was down to 480cps using ICE compared to 1100cps with NOS).

I wasn't even bothered when the FTP part didn't work (either froze in the middle of downloading a file or corrupted it). Yes, I tried NOS on the same FTP sites and files and had no problems.

I didn't care when it suddenly froze while downloading new newsgroup articles.

I didn't mind when the automatic mail and news connection didn't work and I had to kick it manually.

I smiled when it bombed out while expiring mail.

I giggled when it bombed out when sorting new newsgroup articles.

BUT, just now, when indexing my new mail, it came up with "Yellow Pages-working ... sorting ....' closed the window, opened it again, closed it, opened it, and on and on (I went a made a cup of tea 'cos it looked like this was gonna go on for a while) and came back five minutes later, it had just finished. So I had a look at my Yellow Pages to see what it had done, IT HAD COMPLETELY CORRUPTED MY YELLOW PAGES *AND* ALL MY EMAILS FOR THE LAST WEEK !!

AAAAAAGGGGGGGGHHHHHHHHHHHHHHHHHHHHHHH :((((((((((((((((((((

That was the final straw, I am going back to using OASIS 1.35 and NOS.
Now I've gotta trawl through all those files manually to try and rescue my mails and addresses :((((

DAMN IT, I AM ANNOYED !!!!

Someone wake me up when (IF) OASIS II actually works perfectly, 'til then,

Later.

>> g> rumours next time...
>>
>>(1) It's not a "false rumor," it's a report of what actually happened to me.

Well, TCache CAN crash a partition if wrong configured. I use TCache now
over 3 years. All this time I had one crash and it was my mistake....

>>(2) I read every damn bit of everything that came with the archive,
>>including some rather useless stuff. I could not FIND any way to disable
>>write caching. If there is a way, pray tell, in simple words, EXACTLY how
>>it is done. There is NO check box in the config ACC that specifically says
>>"Write cache ON|OFF" - I went over it a dozen times before trying the
>>program, just be be sure.

This is just WRONG. TCache is distributet without any write caching
activ. So if you want to switch the write cache on you have to activate
it. And for activating you need a pass phrase which you have to type in
two times.

Don't tell us rubbish.

In the main dialogue of the TCache ACC the first three buttons are for
activating the different types of caching. The first one allows to switch
the caching generally on or off. The second one activates a check if the
data to be written is already unmodified on disk (to save some accesses).
The third one allows to activate the write cache if enabled. Now test it
and try to activate the third one. Save the result and start TCache ACC
again. The button is disabled..... It is IMPOSSIBLE to activate the write
cache without the passphrase!
But maybe you tried the button 'pun_info'. And this CAN cause a crash if
your harddisk driver is too old. There are some reasons why
Tcache could trash your disk: for example a ICD 'THE LINK' hostadapter
which takes its power from the harddisk. TCache is so fast that some
newer harddisks have not enogh power for the hostadapter then.

>>For your information, I work in a computer lab as a technician, and I am
>>very familiar with the problems a write cache can cause. It's a good idea,
>>IF you have a system that will never be shut off accidentally, or lose

>>power unexpectedly. For most people, it's a terrible idea. That's why,
>>even where I work, we disable write cache whenever possible.

This is your opinion. I tried it out and switched the computer off while
TCache was accessing. The result was a few lost clusters, but not a
mushed disk.

>>So, before you post a snotty, useless flame to someone next time, read what
>>he wrote carefully, then stick your remark in a dark, moist place.

You've earned this snotty useless flame, because all you write was just
wrong.

Though nothing so drastic has happened to me (yet, touch wood) I know
that frustrated feeling very well. There really do seem to be some
problems with ICE and Oasis. I cannot get POP3 to work reliably, it
ususally freezes up on me, only occasionally working... no problem at
all with NOS, and I have had the same sort of file corruptions/freezes
that you mention with FTP and done the same experiment you did with
NOS. Which leaves for me only news working well. I am relly looking
forward to Oasis2 working because it seems so potentialy good,
but I'm having still to work with 135/NOS_POP3 which is more or less
rock solid. Roll on those updates and fixes Phil and Dave, I do want
to be able to use your new program.
Richard

3137. Millenium bug for TOS?

Newsgroup: comp.sys.atari.st
Date: 1996-05-19 00:00:00 UTC
From: aa860@ccn.cs.dal.ca
Message-ID: <4nnbdq$6n6@apollo.isisnet.com>
Source record: 144922

I've just listened to a discussion of the millenium problem and am curious how it is going to affect Ataris. In case you haven't heard of this yet it is a practical problem with much software and os's that will not let them accept dates past Dec 31 1999. I tried on bootup just now to set the system to Jan1 2000, and after my computer (an STE with TOS 1.62) was running it said it was 1985! While using Butler James as the control panel, I could not set the date to anything before 1985 or after 1999.

I don't happen to use any critical software that uses the computer's system date to track time so I'm not overly worried but it is a question of some interest. Does Magic correct this limitation? Does TOS 2? Is there any auto program that might be able to fix this? Butler James, for example, only allows two slots for the year, do other control panels allow more?

>thread.
>
Hi there.... I have a small program I downloaded from AdLib BBS which
goes even further than this. It allows the editing of the saved
games, to make your ship much better (and give you more cash), but
what is even better is that you can still have a tiny ship (fast) and
have a large plasma accelerator, missiles and lasers without a problem
with ship size (you can even have a maximum sized cargo), so ship size
doesn't effect weapons etc.

If anyones interested, email me:

vrc@phil4.demon.co.uk

BTW: WARNING: this may remove your enjoyment of the game !

ATb.

>fundamental I have cocked up.

Exactly the same thing happens to me (4MB STE, TOS 2.06). Watching the modem very carefully, I can see that ICE sends what should be the reset string as soon as I choose Ice Connect, but nothing ever gets sent back. Only one of the modem lights flashes, so I reckon it's not receiving ASCII data. This happened with both versions 2 and 2.01.

Is anybody having the some trouble with ICE_NET as I am? Nobody else seems to have reported this, but when I go to the TCP/IP Details screen, the buttons don't quite work: "Help" merely switches between black and white when I click on it, "OK" brings up the help screen, and only "Undo" lets me get back to the main menu. And on the News Options screen, the machine locks up altogether. Phil thought it might be due to a corrupt resource file, but it happens with both versions.

In Msg A21942@B, Christoph Chi (chimdjgh@hydra.zrz.TU-Berlin.DE) wrote:

>Or does anybody know a Japanese Word-processor for a real Atari-St

AFAIK there's a set of Japanese (Kanji?) fonts for the Signum word processor by Application Systems Heidelberg (ASH). However, I believe that the program Signum istelf only exists in a German version (i.e. German menus, dialogues and docs etc.). But since you seem to live in Germany this shouldn't be much of a problem I guess.

Check out ASH's home page for more information:

I could be wrong but I work it in characters; 80 being the max I can view. But as you can see I use less, 72 in fact. That's because it's the same as my WP setup for sending submissions to editors. I'm sure anyone reading my mails has no problem because they fit easily on their screens. A bit silly to send something that you know can't be read easily. No?

Alistair Potter.

Wow! You're one of the lucky ones, I'd kill for a PGA TT, especially if the the FPU was PGA because then you could buy a 50 MHz '882! The TT I worked on had a surface mount '030, so I'm 99.9% sure it has the same pin spacing as the Falcon. I've seen the Falcon CPU and it didn't strike me as being any different.

No - they do! You can send HP600/660/850 two kinds of commands: permanent and non-permanent. Once I used the DOS-version of HP Control Panel (w. DOS-emulator), these page-size, etc. settings have been correct for six months now =) !

And, yes - I've switched the printer off during that time.. It really has some NV-RAM, so you only have to set things up once. Unfortunately, the only easy way to do this is through DOS or Windows =(...

>Being all that he can be... Without joining the army! The Smooth One.:>

I would disable your desk accessories and auto folder programs. One of
these can cause the reboot cycle you describe. I think you disable
auto prgs and accs by holding shift or alt and a mousebutton while
booting. I'll look it up in my manual if you don't know.

As for the disk, you should be able to replace that from ICD. They're
still around. It does sound like a bad accessory though or auto folder
prg.

Good luck

There are several options. One, buy a cheap old atari sh204 - 20 meg drive. I recently picked up one with a 520, color monitor and printer for $50, so you can see they're out there cheap.

Two, buy The Link II (scsi converter) and then you can buy a used or new Macintosh (or ibm for that matter - but they're much rarer) external scsi drive for use with your atari. Pick this option if you want to get a big honking hard drive, but think you may change platforms sooner or later. You can move the drive to a mac or an ibm (if you get a scsi card for it.)

You can also buy a scsi hard drive with an adscsi host adaptor card. Personally, if you're just looking for a little storage capacity, I'd go looking for a used sh204. Otherwise, buy a Link II. If you buy the Link, you can also ad an external scsi CDROM and make your system fairly powerful.

Hope that's helped....

]
] The problem is, I haven't got a clue how long 640 pixels is relative
] to how long my lines are. All I can do is copy the lengths of other
] posts...

640 pixels at 8 pixels per character = 80 characters wide (I think). If using screen res > 640 (I use 1024), you will need to set your editor to wrap at 78 characters (the max recommended line length for email and posts IIRC).

Oasis2 opens a text window for reading at full width, I have written to Phil asking him if it can open to the line length of the message body.

From: jmax@interport.net
Message-ID: <4nq52e$re9@interport.net>
Source record: 144767

I'm trying to set up Oasis2 on a MegaSte with TOS 2.06 and 4megs of memory. I'm having trouble logging on to my ISP. I tried both PPP and SLIP and have the same thing happen. After I input my username everything freezes. My logon script is as follows:

```
r:> s:PPP
r:Username: s:xxx
r:Password: s:xxxxxx
```

Oasis gets as far as inputting the username and then just stops. I have to reboot after that.

Also, is there any way to change the port used?

Thanks,

John Hobbs

There's a small window on the back, where you can click the numbers 0~? (I never went beyond one, but it may well go all the way to 7)
I'm assuming here, that you mean you're using the DMA output from the Mega 4.

urrr! you mean you had the original Link II disk in A drive and it wasn't
write protected? You might try Toad computers! Why use it as a boot disk
when a blank formatted floppy will work as well, since I assume you have
the hard drive set to autoboot!
Once you get another copy of the ICD utilities that will work
with the Link II, then turn off the hard drive, turn on the computer with
a BACKUP copy of the ICD utils disk, once you get to the desktop, turn on
the hard drive and run icdboot.prg, then install a C drive icon on the
desktop, open drive C and delete or rename the offending autofolder
program that I assume is the cause of the whole problem! Next, forever
more, don't use the original disks, if you can make a backup!!!!

3169. Oasis2 Networking Problem

Newsgroup: comp.sys.atari.st
Date: 1996-05-20 00:00:00 UTC
From: jmax@interport.net
Message-ID: <4nqfnu$hl9@interport.net>
Source record: 144774

I've solved my logon problem with Oasis2 and my Mega STe by disabling the clock display function as suggested in other posts. Now the problem is networking. When I try to use SLIP, I receive nothing past the inital 88bytes it takes to log on. When I try any form of PPP, the view window says "Bad packet" upon connection. I get indication of some sort of data transmission in both directions, but I can't get anything to work. The send and receive lights on my modem indicate that transmission occurs in both directions around the same time, and comes in pulses. I don't see any relation between the data transfer and anything I'm trying.

I configured the program as best I know how, but the instructions are so "demon-specific" that I'm not sure I've gotten everything right.

I'm assuming that the domain name of jmax.port.net given to me by my ISP, interport.net corresponds to the demon structure of

username:jmax
hostname:port.net

I'm also assuming that by putting reply to: jmax@interport.net, that will override the incorrect jmax@jmax.port.net that Oasis2 forces you into.

Also, how does one handle the SMP server issue?

Also, I'm assuming that the "domain server" it's asking for is either a nameserver or a gateway server.

Any help would be appreciated

Nope, tried 2 sets of know good Terminators, still fails.

> >installed. Caused Daimond Edge Total Sector Sizes to go into Negative numbers.
>
> What is Daimond Edge? A Diskmonitor? I don't no..
>
Daimond Edge is a VERY Good Hard Disk Maintance program by Oregon
Research Associates. BTW, I sent them printouts so they can fix the problems.

> Hi, memory is expensive..
> I used 10Megs in Simms..(FX)
> All simms i got from some brocken PC's..
>
SIMMs have dropped drasticly in the last few weeks. Go to
"http://www.ram4less.com". $167. for a 72 pin, 16Meg SIMM, without parity,
70 or 60NSec. (As of May 14th)

This last weekend I took my Falcon apart again and install the last of the
Blowup, the Screen Extender and removed my ScreenBlaster II. While I had it apart
I changed the wire going to the DSP to a 30 ga., Twisted Pair, correctly grounded
at both ends. (Had to add a ground pin on the FX card.) Now my DSP works all the
time, even for JPEG's. Now I just need to get a faster FPU, the one I have in it is
only a -20 and "POV Ray" fails when I try to use it.

Best way imo ...

The WWW130 STiK installer has a "multitasking" button - use that option. All right I wrote the installer but it's not a blatent plug, its just that I use MagiC so I put that option in for myself.

You will end up with everything nicely tucked away in the folder you select, except for STIKTSR.PRG which will be in the auto folder. Although this is perfectly ok I personally prefer these things to be installed only if I'm going to use them so you can also move STIKTSR.PRG out and plonk it into your selected folder as well.

When you want to use STiK execute STIKTSR.PRG directly and it will install itself (and mess up the desktop) so you'll have to use the "tidy up" feature. Now execute STIK.PRG (the installer renamed it from STIK.ACC so there's no annoying prompt) - enable and connect. Once you've done that, just execute Cab and you are away. STiK should always be enabled and connected before you run Cab otherwise Cab assumes it is going to be used offline only and doesn't load the driver to communicate with STiK.

One very important thing - you must turn Pre-emptive multitasking *off* while STiK is connected otherwise MagiC will task switch during time critical STiK code - the effect on my system is the modem transmit light flickering madly and very little else happening.

I wrote a cheap 'n' cheerful launcher which can be installed on a keypress. All I have to do is hit ^L (or whatever) and the whole thing gets sorted plus the desktop gets tidied as well. Email me if you want a copy 'cos it's handy for other things, as it can be told to launch both by Pexec() for TSR's, or shel_write() for apps.

Tos error -37 maps onto MSDOS error 6. Invalid handle means just what
is says ... when a program opens or creates a file it is assigned a
number (handle) which it has to use to access that file. If one of the
TOS filing system functions is passed a handle for a file that it does
not know about it will complain. The most likely cause of this will
badly written code like this ...

```
handle = Fopen("example",0);
Fread(handle,...);
```

ie the program did not bother to check that the file was actually
opened correctly - it just assumed it would be.

whereas ...

```
handle = Fopen("example",0);
if (handle < 0) /* bad news, didn't happen! etc */
Fread(handle,...);
```

does check.

>that my TT is happily looking forward to the millenium.

There should be no problems with the system. For the purposes here it
is good enough to say it is represented as the number of seconds since
Jan 1 1980. The year is encoded in 7 bits so should be able to trundle
along until 2108 before screwing up. A lot of software should be fine
even if it thinks it is actually 1900 as long as it doesn't attempt to
do time calculatations. I would think that those programs which do
process time will be sensible enough to store the complete year even
though they may only display the last two digits.

Hi,
I've been using an ST and really love it! I'm in need of a new computer
though. I'm a musicion and want to get into direct to disk recording.
I've heard that the Falcon is exellent machine, but know that Macs are too.
I'm worried the software for the Falcon would be hard to find. Apple still
seems to be popular, but I need some advice. Please let me know by E-mail
or by post.
Much Thanks,
Sean

3178. GOBLINS II...Help!

Newsgroup: comp.sys.atari.st
Date: 1996-05-20 00:00:00 UTC
From: Katherine L Ellis <kellis@mtholyoke.edu>
Message-ID: <Pine.ULT.3.91.960520212044.12984A-100000@mhc.mtholyoke.edu>
Source record: 144783

Hi,
I'm playing a game, Goblins II, and I am in some sort of weird psychedelic musicland. I have the following items: rock, bottle, matches, net, pump, tune, and elixir from Vivalzart's place. I have done almost everything possible to find a doorway back to reality (out of this dreamworld) and can't find out what to do. The clip is still holding the tube shut, and I've gotten the music (tune) that's needed for the basketball treehouse. If you've played the game and can be of some help to me, could you please send me a message telling me how to get the hell out of where I am? Thanks in advance, Bye.

3179. The original Goblins II is possible on Falcon.

Newsgroup: comp.sys.atari.st
Date: 1996-05-20 00:00:00 UTC
From: Katherine L Ellis <kellis@mtholyoke.edu>
Message-ID: <Pine.ULT.3.91.960520212602.12984B-100000@mhc.mtholyoke.edu>
Source record: 144784

Just need to run ST2Falc, switch the preset to ST/STE, then click "on memory", quit the program, and then change the rez to STLow. You can even install Goblins II on the hard drive without it bugging out. Backward will work with GII for awhile, but soon after it freezes.

3180. Problems with NVDI 4

3183. Printing from CAB

Newsgroup: comp.sys.atari.st
Date: 1996-05-20 00:00:00 UTC
From: Andre_Leistner@b.maus.de
Message-ID: <199605202233.a23150@b.maus.de>
Source record: 144788

In Msg A22657@B, Richard Thomas (dickie@mistral.co.uk) wrote:

>Whenever I try to print from CAB, and press "print" from the dialogue,
>Cab just seems to freeze

Are you sure that CAB really freezes? How long did you wait? ;-)

The problem may be NVDI's configuration, the amount of free RAM in your Atari, and its speed. If the printer driver is configured to print greyscales or true colour then do not wonder. Colour and greyscale printing need awful lots of memory and an 8-MHz-Atari is too slow for that, IMHO (it even takes a loooong time on my Falcon). So I'd recommend to switch the printer driver to black&white printing (in the CPX).

If Cab doesn't print then, check your configuration with some other applications that use GDOS for printing, ie. Kandinsky, papyrus, etc.

>though with word processing programs, the LQ mode works fine.

So you can print via NVDI with your word processor but not with CAB? That would be strange ...

>$US?
>
Hold on one sec:

This is comp.sys.ATARI.ST and this chap is wanting to fit an IDE harddrive to his STFM, and Atari, not Amiga.

As far as formatting goes, I know Amiga and Atari Floppy Disk formats are very very different, I'm not sure about Harddisk also, but as the Amiga uses extended filenames and the Atari doesn't I'd guess that the harddrive would need re-formatting.

Also whats this about 'screen mode' ??? What has the screen mode got to do with if the drive will work ??? besides Amiga and Atari screen modes are different anyway.

As to an IDE drive working with am STFM, I'm sure you are better off trying to use a SCSI drive. To use the harddrive you will need some sort of host adaptor, for an IDE drive, because the STFM only comes with one for ACSI drives (Atari's own type), and unless you already have a Host Adaptor, I'm not sure there are any for IDE drives (correct me If I'm wrong !), and Atari STFMs. If this is the case get a SCSI drive (for which there are host adaptors) and a host adaptor (Top Link etc.) and use that.

If you don't have an IDE host adaptor already, or can't get one, or don't have formatting software (use AHDI 6) then get a SCSI drive, and save yourself the huge amount shipping to the UK will cost.

3185. WTB or FS Messages

Newsgroup: comp.sys.atari.st
Date: 1996-05-20 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <832689970_OASIS_@phil4.demon.co.uk>
Source record: 144790

As we haven't yet managed to arrange a comp.sys.atari.marketplace newsgroup yet, we might try and get a standard subject line sorted out for _this_ newsgroup. One which states the following would be fine:

i)where the item is being sold from
ii)where the seller wishes the item to be purchased from
iii)what it is that is being sold

eg.

FS (UK+) 30Meg SCSI Harddrive

indicates that for sale is a 30MByte SCSI Harddrive, the seller lives in the Uk and wishes to sell anywhere (indicated by UK+)

whereas

WTB (US) Colour Monitor for 1040STe

indicates the user wants to buy a colour monitor for his/her 1040STe, and is really only interested in offers from within the US.

Posting with the use of country included saves people not living local to the sender, from reading through the whole of the article only to find the live the other side of the world, and so its pointless buying the item (due to shipping costs !).

If adopted this method af stating in the Subject line where and what is for sale (or wanted) will save potential customers time, and effort.

If you disagree with any of the above, please post here.

Also if you fancy putting together an FAQ on the subjet above, please do, and post it frequently (providing its not too lengthy !!).

If *anybody* can arrange for a marketplace newsgroup then please please do so, the number of articles in this group relating to items for sale or wanted is still as high as ever, and I'm sure people not interested in them would love to see an newsgroup free of them !

I don't know about Europe online... but:

Beware of cheap internet providers is what I say.. there are a few,
one for instance that offers a lifetimes free access for a one off
payment... cool, but a little risky, what if they go bust within a
year ???

Also some of the cheaper providers don't have 100%UK coverage, so you
end up paying large amounts of cash for phone bills.

Some smaller internet providers also use other providers facilities,
ie. usenet news, irc etc. etc. this isn't normally a problem, but the
agreement may not last forever. Or you could even find the internet
provided doesn't have any of these services, ie. they have no new
server, or irc server, and you have to use a public one instead, often
slower, and more inconvenient.

As to recommending an Atari Frienfly Internet provider, I don't know
!! When I joined demon, I never used their support phone line (because
the main desk was always busy :)), and so used their support
newsgroup instead, fortuantly I was able to get online initially, so
there wasn't a problem with contacting the newsgroup for help.

My suggestion is that as far as providers go, you may be better off
paying the little extra, because it is likely that it will work.

ATb. and good luck.

Deja-Vu !!!

I remeber posting a question, almost the same as this not all that
long ago !!!

>
>Examples of shareware I have are:
>(and absolutely no malice intended to the respective authors)
>GSZRZ
>Everest
>Thing
>Ruftrade
>4-7-11
>Oasis (well it's a pre-reg!)
>
>Any thoughts appreciated.
>--
>
I think the views I got at the time, including from one or two
shareware authors, are that if you sell on the registered software,
that you contact the author first, the idea behind this was that they
change their records so they know who the new user is, and can keep
them upto-date with updates etc.

If the author is no longer on the scene, who knows !!!

Also were you going to sell on the software/registration, for less
than you originally paid ??? otherwise you may as well let the person
download/get from a PD lib the shareware version and register it
themselves (then you can keep your version !).

BTW: how much do you want for an Everest Registration Key ???

Hmmmm I think Fronteir was meant to be a way of life, not just a game,
as to what you get out of it ??? I gave up after a while.

Thargoids are ships/enemys from the Original Elite 1, (I used to play
this on the Beeb !), they were I think the most difficult ships to
destroy, and AFAIR also spawned small ships as you attacked them !!

I managed to find wormholes if you are interested !! this apparently
makes it easy to deliver packages on time, because it takes
practically no-time to warp to places a distance away, If you want
more details let me know.. and I'll dig up the stuff.

Also I found a program that patches the saved game (loads of wepaons
cash etc. etc. !), see another post for details.

If you want details of (or actually want the patch program) of the
above email me at:

Hmmmm. I've always used MIME over UUencoding, simply because its more
efficient in terms of space. Is there any reason that a program
should inhibit a user from using such a function on what ever binary
they like, whether it is intended to be posted to a newgroup, or to be
sent as mail ???

Users of usenet (outside the atari platform) commonly post binaries
that use Mime encoding for effeciency reason I talk about above (and
indeed because its the only way the _know_ to send a binaary file) is
there any reason to stop users from doing the same, or forcing them to
use UUencoding, or an external program, just because the RFC doesn't
define the use of MIME in news articles ??? Surely if posting an
articel containing a MIME attachement to a newsgroup were ever
considered an infringment of RFCs then it would be the users fault,
for attaching said binary, not the programs fault.

Indeed if this is the case, how come such mailing programs allow rogue
users to post Spams ??? or indeed allow users to post binaries to

non-binary newsgroups... such stupid programs should not be allowed !!
:-)

> I have taken a lot of criticism in the past over 'non-conformance' to
>RFCs and other Internet standards. Surely a package that you recomend over
>OASIS is not breaking these 'rules'.
>
> TTFN

AFAIK part of this was over the attacment of sig files, and where the
actual articel ended, and how the wrong chars were used to signify
this ???

Did the user have a choice ion whether one set of chars was used over
another ??? indeed does the user get to choose if these characters are
added at all ??? No... this is where the program is at fault, the user
has no choices and so only the program can be blamed, the user cannot
as he/she plays no part in the problem.

As far as allowing MIME in news goes, the user makes the choice, and
can use any method they please (using other programs if needed !), if
they choose to include a MIME file, and it breaks an RFC, then this is
the users fault, the program did not 'force' it on them, they chose to
do it. Indeed I do not blame a program that formats my disk, when I
click on format mistakenly... it was MY fault, it just did what it was
told.

As far as promoting bad habits... I have never yet seen someone
complain that a user should not uses MIME in a news article... if I am
wrong here please correct me ! Bad practices are caused by users not
programs, if in time MIME encoding in newsgroups becomes unnaceptable
(in the way spams are now, or posting binaries to a non-binary
newsgroup) then the user can quite simply take the choice _not_ to
post using this method, and all will be fine !

Please don't take this post the wrong way... I just feel you are going
a little overboard with the 'I won't include it because its not in an
RFC'

PH>If anyone knows the cause of the problem I'd like to know what it is,
PH>as a stab in the dark though I'd guess its something to do with the
PH>physical screen, not being aligned to where the data is actually being
PH>written, and so the screen is shifted to the right ??? just a wild
PH>guess !

No. It is a hardware problem. There was a series of MSTEs which had a faulty chip inside. Another symptome for that is crankling DMA-sound output. Check it out with Paula and your MSTE attached to a hifi-amplifier.

Tschuess Frank

P.S.: Its the GST-Shifter which was ill. Take a look inside your MSTE and tell me the number printed on top of chip U502.

My impressions as a Registered user is so far so so!
Some of the problems i've had so far :
1) NVDI 3.02 doesn't work with it
2) No right mouse click to search when installing new groups
3) My name is not being sent out properly for e-mail and for some ftp
4) You can't list your modem speed as a default like in 1.35
5) On my Falcon if I logged in with Fpatch 2 it would loggin at 9600
but if I used Hsmodem6 it logged in alright .

So far I installed the complete prg. 3 times before getting any
results . One of the things I noticed is there is no place to install
your news and default server in Ice.Net . I here we go again had to
use Everest to edit the Demon news , time servers...
But one good part was the unencoding program it worked flawless !
It's obvious there's still a lot of work to be done here but if it
gets done and when Spider comes along it will be a good stable
package. I hope Dave and Phil take a look at MGFTP and try to figure
out how they coded it to be able to download whole folders at a time
as this is a useful feature . So for the time being I will wait to see
how the upgrades come along .

Hello

I am looking for help in a subject i guess lot of people know about
around here; I hope i am rightï¿½

I am the lucky owner of an atari 1040 ST (perhaps 10 years old), I've
been using with some music software to play with my MIDI keyboard
I also use a powerbook 5300 to surf on internet
I would like to get some MIDI files on the net with my macintosh,
transfer them on a diskette, then read the diskette with my atari in a
Atari - MIDI file format
I don't know what software to use
Could someone give me a hint ?
Thank you

Hugues

3202. Printing from CAB

Newsgroup: comp.sys.atari.st
Date: 1996-05-20 00:00:00 UTC
From: dickie@mistral.co.uk
Message-ID: <832556234_OASIS_NEWS@mistral.co.uk>
Source record: 144940

Whenever I try to print from CAB, and press "print" from the dialogue, Cab just seems to freeze. The mouse pointer still moves, I can adjust the borders in the print dialogue still, and choose from the printer driver list, but if I press cancel, the button blacks but does nothing. I am stuck within the dialogue and have to re-boot. I have NVDI 4.1 installed (I think) correctly, though I am new to it.
My printer (also newish) is a Canon BJC210, which does not have its own driver in the NVDI list. I have tried using the BJC600 driver, and also in Epson LQ emulation mode without sucess, though with word processing programs, the LQ mode works fine.
Has anybody got any suggestions about where I am going wrong?
Richard

Message-ID: <4notd8$cun@news1.io.org>
Source record: 144946

Steven Slater (aa860@ccn.cs.dal.ca) wrote:
: I've just listened to a discussion of the millenium problem and am
: curious how it is going to affect Ataris.

I too was curious and so set the time and date on my TT030, TOS 3.06 to 11:58 pm on December 31, 1999 and watched the new year come in with no problems. The automatic date insertion in AtariWorks worked fine and showed January 1, 2000 after the change. Files saved both before and after the midnight change showed the correct dates and sorting files in a desktop menu (text mode) by date showed that the files saved on 01/01/00 came later than those on 12/31/99. From all this I drew the conclusion that my TT is happily looking forward to the millenium.

Regards,

M.A.C.E. the Melbourne Atari Computer Club in Australia now has a homepage.

Everyone is welcome to come by and drop us a line or add us to your own.
I dont have any links as yet so if you would like yours included once i
add that side of it just drop us a note from the homepage.

Big Apology....i designed it on Netscape (big slap on the hand!) but
apart from a couple of text alignment anomolies it is quite viewable
on CAB.

Thanks...and bye!

Well I'm fairly certain it was 1.16, but I wouldn't put money on it ;)

Either way it would have been from Hensa.

Cheers,

Xav

3218. Atari 1040STF (?)

Newsgroup: comp.sys.atari.st
Date: 1996-05-21 00:00:00 UTC
From: freeze <freeze@transport.com>
Message-ID: <31A2A1C6.3FC3@transport.com>
Source record: 144656

I just picked up an Atari 1040STF for a very good price and have a few questions and was wondering if somebody
could help me out.

1. There seems to be a hard disk plug in the back, is this SCSI, IDE or some kind of other proprietary
connector?

2. I don't have an Atari monitor but was wondering if this can be hooked up to a Commodore Amiga 1084 (round
connector) RGB monitor or a SONY 15sf Multisync(VGA/SVGA)?

3. Can the ST use an Amiga mouse?

4. Is there anyplace or anybody that I could get the original included software from as I have no idea what
came with this or what to do.

5. Is there a good source of information or WEB support site in english?

Thanks to all who respond,

freeze@transport.com

3220. AEO UPDATE:It's Official, They're Gone.

Newsgroup: comp.sys.atari.st
Date: 1996-05-21 00:00:00 UTC
From: Mark Santora <santora@earthlink.net>
Message-ID: <31A2AED4.15D2@earthlink.net>
Source record: 144658
Cross-posted to: comp.sys.atari.st,alt.atari-jaguar.discussion

Travis posted this to GEnie, the past Atari Official Online Service, so I guess I can finally let the beans out here...

That's correct - It's officially over. Atari is getting ready to close shop. They will publish NO NEW GAMES. No Skyhammer, No Breakout 2000, No Hockey, No Iron Soldier 2, No Highlander 2/3, No World Tour Racing CD. When the merger with JTS is completed in a few months, Atari will officially cease to exist. They plan to hang in there and attempt to sell off the remaining systems and games in the wearhouse. This is not a crank post - it is true.

Finallly, what has been known within certain circles for the past few months is finally known. The truth is finally out there.

Atari is Outta Here.
End Xfile 2600.

Judging from the name, Europe Online might be connected with America Online. If they are, stay FAR away from them. Their tech support is a bad joke, their software is required (IOW, run a PC or, if they feel friendly, a Mac), and they charge enormous extra fees for Internet access, plus hourly online fees.

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST.
I am also open to trade offers. E-mail me your list.

HARDWARE

Atari STacy4 $700.00
4 MEG RAM
52 MEG SCSI internal hard drive
720 3 1/2" floppy
External Power Supply
Corduroy/nylon carrying case with handle and shoulder strap
Has standard ST ports. MIDI, Parallel, Serial, Mouse, Joystick, DMA, Monitor
Has built in track ball, but if you wish you can use a mouse
Has built in backlit LCD 640x400 mono screen.
You can hook up either an external color or mono monitor.

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. $25.00

MISC

GE Soft Mighty Mic TT/32 4-32 Meg TT RAM Board.
0 RAM Installed Best Offer
TT RAM board that can hold 4-32 Meg of RAM. Board works but
when the machine gets hot the system bombs. With board removed
or system cold, system does not bomb. May be a MMU chip?

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $3.00

Carrier Command by Rainbird. Complete with box, docs, and disks $10.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Dragonflight by Thalion. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

```
------------------------------------------------------------
Omega by Origin. Complete with box, docs, and disks $10.00
------------------------------------------------------------
Wayne Gretzky Hockey by Bechesda Software. Complete with
box, docs, and disks $10.00

>Much Thanks,
>Sean
>
The Falcon works very well as a direct to disk recorder. I am a
musician using a Falcon with Steinbergs Cubase Audio on a Falcon which
gives you 16 tracks of audio integrated into Steinbergs well known
midi sequencer. The results, using the Falcon Digital Interface (FDI)
and the Analogue 8 (8 discreet line outs) are of full professional
quality. In England at least it remains the cheapest and probably
simplest way of getting so many audio tracks for your money. If you
love your ST, odds are you will find a move to Falcon painless and
indeed pleasureable. The downside of all this of course is the lack of
support the Falcon will receive due to its low market share. Steinberg
have already admitted that they will only be bugfixing in future
releases of CAF. All real future developement will be going into MACs
and to PCs and the real longterm outlook seems to be weighted with the
PC (market forces at work). So there's the stark choice. The Falcon
works just fine as a musical tool, but the future will eventually be
elsewhere, you just have to weigh up the pros and cons. I know that in
a year or two I'll probably have to buy myself a Mac or PC and
side-grade to Cubase on one of those other platforms. Until then I'm a
happy Falcon user who paid less for more.
Richard

Oasis 2 is a program that you download and decompress.
It then enables you to spend all night tearing your hair out and working
up a huge phone bill (thanks BT minimum charge 5p a call).
Afterwards you can then download an update of it from another archive
and do the same thing 8).

Only joking phil !!

yours

Garfie Warfie.

Ps has anyone fixed the Dial up bug yet ?

2 in 1 is good but has anyone tried Auspack. I prefer it. It will do a whole folder of different archive types with one click. It's best to place Auspack in your download directory and configure you desktop to start Auspack when any archive extension is clicked on. It will then depack every file in your download directory.

It's on hensa and IMHO it's better than 2.1

Mark Parry (paz@wile.demon.co.uk) wrote:
: Hi all,
: I've just downloaded some SpeedoGdos fonts and they're in a archive
: called .TGZ

Sadly this is a tarred gnuzip file :-). To unzip it, if it is still on your net service provider, from your unix shell type gunzip filename.TGZ. That should leave a filename.tar file. Find a copy of untar for the ST (any ftp site should have it in Archivers directory or similar) and get that and the .tar file back to your machine. Use untar by typing the following...

untar -xvf filename.tar path

...where path is where you want it to end up (leave it out and it should go into the same directory as the .tar file)...

Hope this helps (see the docs with untar if it doesn't want to work for you)

Hi there...

Falcon owners MUST READ THIS!!!

The Running demo (Doom clone) is available. I got it from ftp.cnam.fr in
the pub/Atari/Falcon/Games directory. Its about 900kB and called
running.lzh. I reckon its a winner!! It ain't as nice looking as
Bad_Mood, but it sure moves quick and there are enemies and solidness
about the walls, plus doors that open!! You can also shoot the baddies!!

Grab it and see, you'll like it!!!

: I would like to get some MIDI files on the net with my macintosh,
: transfer them on a diskette, then read the diskette with my atari in a
: Atari - MIDI file format
: I don't know what software to use
: Could someone give me a hint ?

You will need a program for your Macintosh called PC-exchange. This allows the Macintosh to read/write MS-DOS format floppy disks (which can then be read by the Atari). I think PC-exchange is commercial software (you may need to buy it) but I do not think it is expensive. You would need to format the floppy disks (DS-DD disks only) on your Atari to be certain that it will work (older ST's may not read a pre-formatted DS-DD MS-DOS formatted floppy disk)...

Hope this helps...

```
An "Invalid Handle" error is a GEMDOS error.

Files are opened by the application, and a value is returned to the app
indicating success or failure in locating/opening the file.

This value is traditionally known as a handle.

Certain values (such as those less than zero) are deemed to be errors.

When an application needs to refer to an already opened file, it gives the
OS the handle number along with the "do something" command number.

If the handle number refers to a file that doesn't exist (because the file
hasn't been opened yet) TOS will sometimes pop up the "TOS error #6"
alert.

What happens next (after you acknowledge the alert by clicking on the
button(s) displayed) is up to the application.

In cooperation with USR-Germany we have fixed this problem. With CoMa 3.40
the send-errors are history.

CoMa 3.40 will be availible in June.

From: epkrgdh@epk.ericsson.se
Message-ID: <4nru8u$fv4@erinews.ericsson.se>
Source record: 144815

Buy an C-lab falcon and all you need is a:
- monitor (ordinary pc-monitor)
- hd-recorder prg
- and a big SCSI harddisk

the rest is built in the computer!

Depending on what you shall do with the samples you have several prg
to choose between.
WinRec if you want to add some DSP-effects
Cubase audio if you want 8/16 channels hd-rec integrated with MIDI.
4T/FX if you want an ordinary "porta" with effects.
etc etc etc

If you want to record 8-track at the same time you can add an external 19" rack-
mounted module (you also can have 8-seperate outs, SPDIF which is a digital interface
which allows you to record digitally from cd or dat).

The Atari Falcon can handle 16 tracks on a 16Mhz 68030 machine.
If you want to record 16 tracks on a pc you will need a pentium 133 Mhz (at
least) it's not enought with a pentium 90 Mhz.
And with a mac you need a PowerMac else you can "only" record 8 tracks.
It's strange that an Atari Falcon on 16 Mhz can do 16-tracks, well if you are
technical it's not very strange, it's the system architecture etc.

If you want it to go even faster you can buy an accelerator.

Ohh, I forgot. With Cubase audio you can do a lot of DSP-functions such as
reverb, eq, delay etc and pitch, timestretch etc.....
As you probably know it takes a while to stretch a sample, but not with a falcon.
A one minute sample take me 2 minutes to stretch from 120 bpm to 80 bpm (or 160 bpm).

If you want more info please mail me!

Regards Ronny G

> lots faster. /*snip*/
>
> Graham Cornelius

Actually you are both wrong about windows. It is cooperative. The active window does not have all the CPU time. The active window is only a conceptual thing, it has no higher precedence, it only means that all of the keyboard input goes to that window. The way it works is that every window sits there and waits for a message from the operating system. When it receives that message (e.g. a menu is selected) it acts upon it, taking up 100% of the processing power, and then it waits for another message. The whole thing works through messages, there are no time slices and task switching is achieved througn the crude method of "whoever gets the next message gets the processor".
So, if an application is busy doing some calculations it must occasionly enter a "wait for message" mode (usually it sets up a system timer to tell it when a set period of time has elapsed) in order to allow other processes to act upon their messages. This makes the entire system very sluggish because messages are not acted upon instantaneously.

It means that they were archived using GNU Tar with options zip. Not sure if this is available on the ST, so the easiest way is to get 2 programs -- gzip and tar for the ST. Do a GZIP first and then a unTAR.

I think you can find both of them in uuae or Hensa. The docs will let you know what options to use.

Remember that this will disable any TT RAM you may have.

Another thing to try is turning off the cache.

In general however, many games do not work on the TT030 because they
are so uncleanly written. There is not much you can do about it except
get more modern games that generally will work better.

Yes I have had this problem and can advise you of a way around it.

AFAIK it applies to an STE or possibly later TOS versions than 1.02.
If you have an STFM with TOS 1.02 there will be no problem.

The way around this problem is to run it off a Hard Drive. You must
have the Master Disc in the floppy drive for it to work this way.
You, of course, have the samples on the Hard Drive to avoid having to load them
off the floppy. The whole system works much quicker this way too:-)

I am told by a programming Guru that it happens because Atari changed
some of the disc drive routines slightly in later TOS versions.

Source record: 144823
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

Hi, I have a Copy of Tom Hudson's Cad3D.v2 for the Atari
but my copy of hardcopy.prg produces defective Gem files
- the files seem to be truncated, and the metafile extents are
not updated.

The original disk does not boot correctly, and all by backups
have the same problem, so the problem may have existed when
I got the original disk. At the time I used the printer driver,
but now I need Gem files so as I can covnvert to Postscript.

Do you have a version of hardcopy.prg, hardcopy.rsc that uou can
uuencode and send me ? I know this is commercial software, but
harcopy is useless if you don't already have Cad3D.

cheers

Has anybody got POP3 on Oasis2 working reliably with their set-up. I'd love to know if my problems in this area are due to a bug with my particular setup/provider or in fact a problem with ICE itself. POP3 logs in fine, but freezes during retrieval (roughly 4 times out of 5). If I "disconnect mail" and try again it freezes in the same place and I finish up with duplicates in my mail box. NOS_POP3 works fine BTW. Comments anyone?
Richard

: Not only that, but it crashes MagiC (2, anyway! :-( )

OK, OK, don't hit me, but are you saying that an SLM printer crashes
MagiC 2? If not, forget this, but my MegaSTE with MagiC 2 has been
happily printing on an SLM804 for two years now. I know about the
freezing, though -- is it possible to fix that with background DMA
as implemented in MagiC 4? Any ideas?

Etwald Goes (etwald@knoware.nl) wrote:

: OK. I think I'll just have to buy a new version. I also got a tip I'd
: better upgrade to version 2.6. How costy is this in America ? In the
: Netherlands I have to pay the TOS 2.6 ROMs and a special convertor
: board (2 chips roms instead of 6 chips roms). This will cost me about
: $125. How much does this cost in America ?
I don't know about America, but $125 for a TOS 2.06 upgrade sounds
EXTREMELY expensive to me. I don't have actual prices right now, but
if I had to guess, I'd say half that price here in Germany. I'll look
it up later, ok?

: Is it BTW also illegal if I program my own registered version of
: KaOSDesk or Gemini in EPROM (It's just a medium) ?
It is not illegal, but AFAIK it can't be done. These are oridinary
applications which expect to find their variables next to their code,
and if their code is in ROM, then so are their variables, so that they
can't change them. It could be done to load them from EPROM into RAM
at startup (don't ask me how!), but I think that's not what you had
in mind, is it?

So long

From: dillera@Glue.umd.edu
Message-ID: <4nsru9$mmt@mojo.eng.umd.edu>
Source record: 144837

Are there any docs available on line for nos?

I am trying to get my st to connect to a ppp provider here in the states. There was not docs that came with the nos archive. It looks like it will do ppp.

Any info or pointers provided would be welcomed. I have set up macs, pc and unix machines over ppp and I am familiar with tcp/ip, but this NOS has me stumped. Its a new ST that a friend gave to me.

Hmmmm....

I think you should really think seriously about what John has said,
especially if you haven't got thousands of dollars to lose.

Before I say anything more I will point out that I live in the UK, and
don't know a huge amount about whats going on in the US, other than
what I read here, and hear from users via email etc.

In the UK, Atari World has just gone into liquidation, there is now
AFAIK only one Atari magazine available (generally available) from the
UK: ST Format, which costs 4.25UKP and had a circulation of about
21000 in January this year, and now has a circulation of about 14500,
a drop of about 1/4 of the circulation.

And apparently this is the World's Biggest Selling ST Magazine.

I don't want to be too pesamistic, but I think you need to be aware
that the Atari market is not growing, people will always use them, but
you are not going to be able to bring about a huge growth in atari
owners.

If you have money to lose, and lots of it then there is no reason to think about these things, and indeed you have no worries, but if you are wanting to make a business out of this, that at least breaks even then you are going to need to look seriosly at what the state of affairs is.

>Here's a real live Example... me. When I tried to get on line providers
>said I was unable to do it with an Atari... Here I am. They said I
>couldn't produce a web site... it's here. I couldn't run my business with
>it... I am and it's growing everyday.

Sure you can engineer changes yourself... and congratulations for having done so, but to produce a magazine is one such thing... not difficult to do, possible indeed, but selling it is a different matter.

To sell your magazine you need the cooperation of the buyers, thousands of them, all of whom will pay for your magazine, and keep their atari's (not many non-atari owning ST Format buyers I suspect).

And to get people to subscribe you need even people, who will have to have faith in the fact that your magazine is going to keep going.

I'm not stupid enough to pay a 50quid subscription to a magazine that is so small, and losing money at such a rate that its going to go bust in a few months time... not many other people are either.... In order to get people to subscribe you need to have a quality profit making magazine, otherwise your subscription level I suspect will be very low.

I'm not syaing all this because I don't want you to start your magazine, or because I want Atari's to die out... I'm saying this because I don't want to see you bankrupt. What you are proposing to do, sure takes some amount of initiative, drive and even dreaming... but to sustain takes much more business sense, and you need to check properly, that you will find enough subscribers to break-even, that you will be able to make a profit, and that the readership will stay with you in the future, and not all disapear and buy PCs etc.

Do your checking carefully, and make sure you aren't going to go out of business, and the best of luck if you do take the plunge.

I get bad PPP packet messages about every other log on, about 3 of them before I get disconnected... very strange, and probably going to be quite expensive (min call charge in uk !).

Any ideas whats causing these bad ppp packets ??? if it logs on fine, it seems to work without an error, if I get a bad logon (about every other one) nothing gets done, it just falshes up a few bad ppp packet errors and hangs up the modem !

3264. New Atari Emulator?

Newsgroup: comp.sys.atari.st
Date: 1996-05-21 00:00:00 UTC
From: sxp17@po.CWRU.Edu
Message-ID: <4nt82k$101@madeline.INS.CWRU.Edu>
Source record: 144843

From the Cubase list:

> Hi, all
> Does anyone know about an Atari ST/STE emulator to run on a pentium?
> (yes, I know I can't put the dongle on the pc - it's not fo cubase)

There is apparantly a plug-in card called the 'STzer' by Terratec
due for release from a UK company called Digital Media at a
projected price of under 300ukp, and is a 'complete ST' including
the midi interface and cartridge port. The plug-in PC card
reportedly does not use any software emulation and Atari programs
run inside a Microsoft Windows' window along with other PC
programs.
Also apparantly available somewhere is a demo version of
'Magic-PC', the PC version of 'Magic-Mac'.
I have no first-hand experience of any of these products but
have read about them, perhaps someone else can provide more
info?

Best Regards,
Brian

m> (understatement) problems with my TTF fonts. The fonts comes from a
m> cheap PC font collection, and they worked fine with NVDI3, but not
m> under v4.
Have you tried turning font checking off? You should have the line
CHECK_FONTS = 0 in your NVDI .inf file.

It's also worth noting that if you rewrite this .inf file with NVDI3 then you
will lose this entry.

Speak to 'ya later!

3273. Oasis newsservers problem (long)

Newsgroup: comp.sys.atari.st
Date: 1996-05-21 00:00:00 UTC
From: 100710.1360@compuserve.com
Message-ID: <832805910_OASIS_@compuserve.com>
Source record: 144852
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

Hello all! As I have a crappy newsserver at Compuserve(*), I always try to find new public servers, and test them... recently I had problems with two different types of servers(a&b):

-a) INN 1.4 unoff3 (and perhaps unoff4): the "NEWNEWS list.of.groups date time GMT" command used by NOS to get a list of messageIDs does not work properly... I recieve a complete list of *all* articles the server has in the requested groups, not only articles recieved after date/time... This is a big problem, because even if I maintain a history file of 2000 IDs, NOS will download very old articles I recieved yet 2-3 weeks ago... maintain a bigger history file (3000 IDs? 4000?) is not a good thing, as it is much slower for NOS to scan duplicates.

Even with 2000 IDs in history, the scanning is very slow when the NEWNEWS gives me 600 or 800 IDs, for in the end only download 50 really new articles... about 20 to 30 minutes for the complete process! And this after having done a nntp session with compuserve, downloading 150 articles in about 3 to 4 minutes...

I dont know why, but sometimes NOS seems to scan history for duplicates very quickly, say 20-30 duplicates per second (in memory?), and sometimes much more slowly (on disk?) at a rate around only 2 duplicates found per second. Someone knows how to force NOS to scan in memory? The strange thing is I would say it's not dependent of the lenght of the lists, but of the number of nntp session already done in the same connexion... I get news from 4 servers each time, the last 2 sessions are always slow.

Thanks God, the batch mode is on, with 24 buffers, so NOS continues to retrieve not duplicates messages while scanning... but when each article comes at 1500-2000 CPS, the whole process gives me an average 100 CPS...

Someone knows if this NEWNEWS command date problem is a known bug in the unoff(icial) versions of the INN server program? Is there a way round? For the moment I call these servers only for 1 or 2 important groups, not for all I want... (if you are curious an exemple of these servers is ns.felk.cvut.cz).

-b) NetManage NNS X 2.07 A. I recently found a french server very good to get my fr.* groups as it has *only* this hierarchy, but with an expire of something like a month, when news.compuserve.com expires fr.* groups after 2 or 3 days (if you are curious it's news.dyadel.net). Great! Oh no... It doesn't work... It gives a "NNTP Error while getting NEWNEWS (response was 500)"... I tried to connect thru telnet on port 119 (telnet news.dyadel.net 119), and typed "help", and this program doesn't have a

NEWNEWS command at all!

Excuse me for this lengthy article, I resume my questions:
1) INN 1.4unoff4: NEWNEWS known bug? way round?
2) how to speed up NOS scanning for duplicates?
3) servers without NEWNEWS command: way round?
4) in Oasis2, is it possible to scan multiple servers for different groups?
5) when will pubnews.demon.co.uk be back to service?
6) is there a reliable public newsserver, using official INN 1.4 or even official INN 1.5 (I don't know if it's released yet?) carying all groups?

Thank you very much if you can help me! bye..

Footnotes:
(*) the compuserve newsserver has many many groups (15139 at 1 May) but looses many many articles in each... a triple problem: bad sync between the 12 or 14 servers (scalable newsserver I think it's called) hidden behind the DNS generic name news.compuserve.com, bad feed organization, and very low expire delay in certain groups...

Source record: 144854

Can't find the manual for my STe right now, so I can't give you the exact pin outs, but Atari implemented a midi thru port on the "spare" pins of the midi in and out ports! So if those pins are tied together you are going to get half of the thru signals stomping on the others! Nice thing is, if you look in your owners manual, you can make a cable that separates out the thru port! Entails chopping 3 midi cable up to make one that has 2 plugs on one end and 3 on the other. Now you know.

Hi. I am about to update my printer to a Canon BJ210. I mostly use an early version of Notator and Le Red.. and a couple of other text and word processors. Does anyone else use this printer with Notator, and is gettting a driver for it easy? Can it be emulated with other drivers. My Notator is old enough not to have any inkjet printer drivers.

Please post. Thankyou.

Also, the Falcon has its DSP and audio matrix system which is PART OF
every Falcon. There is no need to add clumsy and unreliable DSP and
AD/DA cards. However, for those who wish to add for example S/PDIF or
balanced multiple outputs, the DSP has a port at the back for the
connection. Also, the operating system and the audio matrix support
such additions. A Pentium with a DSP card by A, a sound card by B,
graphics card by C, SCSI card by D and perhaps most important, an OS
by E makes for far more probability that these wont fit together in
some way ... and you'll probably spend more time configurating the
system than making music. It's your choice.

> possible to connect the two somehow to transfer files?

It should be possible with GHOSTLINK via the serial port (I do it regularly on my 1040STFM) or the faster modem port (as mentioned earlier in this group, but my news-host discards the messages after 4 days so I don't see it any more).
You have to start the PCSLAVE program in DOS mode and start with a slow connection rate like 4800 baud. After setting the same connection parameters on the ST (with CONTROL.CPX) you can start Ghostlink on the Atari.
If you have a connection, you can increase the baud rate (both sides simultaneously :-).

If you still have no connection try this:
- try a few more times, sometimes the connection is not established right away
- maybe you need a serial fix program on the ATARI side (e.g. HS-MODEM6)
- maybe the WIN95 DOS-box is not compatible, so start in plain DOS (DOS 5.0 and 6.22 work, so WIN95's DOS 7.0 should too)
- maybe your partition is too big (I don't know if this is really a problem because I worked only with partitions < 32MB), so try to install a smaller drive (if you don't want to repartition your drive you might install a small DRiVeSPACE-Volume or try a RAM-Disk)

Hope this helps

I used to use the SpeedoGDOS driver - you just print straight to it and everything works fine (you can even have STraight Fax software detect and send it automatically). I've now got NVDI4, so I assume that I have to use the IMG driver for it (which has an option for 198 dpi ;) but as I recall this will then need to be sent manually. Does anyone know if there is (or if anyone is working on) a Speedo style driver for NVDI so that I can just print to STraight Fax as before?

Cheers,

Xav

>
> Correct me if I'm wrong, anyone!

Okay, you're wrong - sort of. Not about the Linux information, but about MiNT. I use MiNT frequently with my MegaSTE and MiNT itself is not slow - it's the poor Atari attempt at a multitasking GUI under multitos that slows things down. The latest version of MiNT combined with AES4.1 (if you can get it) is fairly useable, and the new AES replacements are trying to get their speed up as much as possible.

Whilst they are still a bit unstable, XaAES and oEASis show what sort of speed an Atari can mutlitask at without having to resort to assembly ;)

I can't remember why the original poster wanted Linux, but there's a hell of a lot of good unix stuff running under MiNT if you want it.

Cheers,

Xav

> in atariland shed some light on this recent bit of info that I just received.
> Thanks.....Ron L

The reasons are severalfold:-

1) Atari wired their MIDI THRU to the "spare" pins on the MIDI OUT socket. It is possible to use a small splitter cable to get a separate THRU and OUT, but most (all?) sequencer software has a THRU function, so you only need the OUT. If the pins are connected you'll get garbled data if anything is coming IN at the same time.

2) Several other manufacturers over the years have used these "spare" pins to implement nasty things that they shouldn't have. The most obvious of these were an abortive attempt at a "double speed" version of MIDI and the system used in a few cases where power supplies are fed through these pins!

Hope this helps.

Cheers,
Xav

Thanks again, this is great news. I'll probably be able to find someone who will let me load up the Control Panel.

Maybe a silly question, but how hard would it be to write a very basic HP Control Panel for the Atari? No fancy icons, just text and options? I'm sure it's a problem that will come up again.

That`s right. AFAIK there is no FPU emulation yet.

> There are some crazies who try to get Linux running on 286 and 8086 CPUs,
> so I think it might be possible to have it on an 68000 as well; but I
> don't think anyone will actually do it, and having seen MiNT's slowness
> on my MegaSTE, I don't think it would mke any sense if they did.

It`s not MinT, that is slow. Actually it is on my Falcon not too much
slower than Solaris on a sun 20. (I don`t have benchmarks, this is my
feeling.) shurely the sun has a quicker processor, but Solaris is one of
the slowest OS I know of... The slow part of it all is the Multitos AES.
just try oAESis, XaAES or N.AES. All of these are said to reach almost
the speed of MagiC (which is very fas as we all know). I could not try
any of the three, but that`s what everybody in the different Newsgroups
say.

> Correct me if I'm wrong, anyone!

That's what I`m doing here.

> 1. There seems to be a hard disk plug in the back, is this SCSI, IDE or some kind of other proprietary
> connector?

It`s calles ACSI and is very much like SCSI. There are Host adapters for SCSI available. As I have a Falcon I don`t remember there names, but ther should be someone around who knows that.

> 2. I don't have an Atari monitor but was wondering if this can be hooked up to a Commodore Amiga 1084 (round
> connector) RGB monitor or a SONY 15sf Multisync(VGA/SVGA)?

The ST doesn`t support VGA screens. There was no VGA when the ST was built. Try the Comodore screen. This should boot up with 640 * 200 with 16 Colours. for the monochrome resolution you will need a Atari monitor.

> 3. Can the ST use an Amiga mouse?

Well... theese mouses are not the same, but they are very similar. I haven`t tried this, but it should work with a simple adapter. I think that it is enough to connect the pins differently.

> 4. Is there anyplace or anybody that I could get the original included software from as I have no idea what
> came with this or what to do.

HM... no Idea. perhaps someone else knows...

Papyrus 4 with NVDI4 should do. These Programms can do Unicode. there are lots of chinese characters in the unicode standard. AFAIK Papyrus comes whith a auto programm to map the keys differently ore something similar. It should be no problem making all chineese characters available through this.

Why were you unable to try them? oAESis and XaAES are freely available...

On my Falcon, GEM-bench 4 gives the modern dialogues something like 120%
of single-TOS speed... other stuff not as high though (multi-tos gives
about 80/90% IIRC). GEM-bench doesn't work with XaAES yet though. :/

That` OK, if it is really just a few files. for more complex problems I would prefere a PPP conection via MinTNet. There are Windows solutions available as well (Winsocks), and other PC OS support that directly. this offers the same functionality of GHOSTLINK with NFS in both directions. Furthermore it is much more flexible as it puts up a compleete TCP-IP Network. so you can do anything inside your small net than one can do in the Internet... (I think that that is enough for most cases) e.g. you can lokk at WWW pages on the PC using CAB on the Atari after you edited them with Everest and stored them using NFS...

Another factor in this equation are those of us who got burned by START and Processor Direct.

The person who was responsible for START stole $120-160 out of my credit card before skipping his office in San Francisco. The Attroney General's Office was less than helpful about that. THose who created Processor Direct (for the Falcon) sent me two issues and quit.

I am not trying to put you in that arena. But I am saying there will be some of us who don't want to try again.

I work in the media department of a further education college in the UK. We have an Atari ST which (apparently) used to run soundtools using a SCSI HD. Unfortunately we seem missing some of the bits to make it work. Not being an Atari or SCSI expert, this is what I know : There's a 19-pin d-type connector on the back of the atari and we have a 1Gb Seagate Hawk SCSI HD. There is no housing box or power supply for the hard drive, and no lead or adaptor to go from the back of the atari to the centurix connector on the SCSI drive. Any ideas on what we need, where we might get what we need (ideally in Europe) or are we wasting our time ?

: Office was less than helpful about that. THose who created Processor
: Direct (for the Falcon) sent me two issues and quit.
: I am not trying to put you in that arena. But I am saying there will be
: some of us who don't want to try again.

....I don't know how many years we suffered lack of confidence for magazines that had gone out of print. Everytime someone would renew, they would say "now your are going to continue publishing aren't you?". Each time we would have to reassure them that indeed we were in it for the long haul. The largest impact was when STart Magazine ceased publication, we had to fend off criticism that was not our fault for several years. Even though we absorbed several magazines and guaranteed subscriptions to those subscribers, we still heard about the failure of the other mag. We absorbed ST Explorer, ST Business, Atari World, etc and continued to satisfy subscription costs to all of their subscribers. We are glad that many of these folks are still with us. I think our secret was that we had planned for the market to shrink and that is why we waided through numerous criticisms for being produced on newsprint. When magazines failed, they were expensively produced and the market could not handle that.

....YES start ups are tough and readers have to have a lot of faith that the content they receive and the advertiser support they get will help the publication survive.

My little list here gives TOS error 6 as "Seek error-track not found"
Possibly the disk has been formatted to too high a capacity
and/ or the drive is out of alignment?
Good Luck

>Thanks.....Ron L

Pins 4 and 5 of the atari MIDI sockets are used as a non-standard 'THRU'.
This means that you can for example control an external module from your
MIDI keyboard without having to start up your sequencer program or rewiring
the MIDI cables (bypassing the ST) just to be able to play around a bit
with that external module/keyboard.

I've made a small box where a switch controls MIDI THRU 'software
controlled (the usual way), or MIDI THRU 'hardware controlled' (by
utilising pins 4 and 5). By the way, the computer has to be switched on for
MIDI to be able to pass through the sockets because of the opto-isolators.

I have an Atart 1040STFM and SM124 monitor (hi-res) monitor for sale. The 1040STFM does have built-in MIDI In/Out, 1 meg of RAM, and comes with software. The software is Cubase 2.0 and Master Tracks Pro. Also, I have a Korg EX/DW8000 visual editor/librarian that I will include. This is a great sequencer, still supported fully in Europe. Groups such as Skinny Puppy and Nitzer Ebb have been known to use it, as well as many others. I am looking for $280 USD OBO + shipping for the entire package (will not seperate).

From: norway@zot.io.org
Message-ID: <4o0bvu$6bm@zot.io.org>
Source record: 144698

Can anyone tell me how I can get the ProFlight Tornado flight
simulator to work on my Falcon? I've tried to use both the Backward
and ST2FALCE programs to run ProFlight in ST-mono mode, but the
plane immediately starts to roll uncontrollably whenever it takes off.
A year ago I wrote to Oregon Research about the problem, and
they sent me a disk containing Backward, insisting that it would work.
After trying a number of times to set up Backward, I gave up.
I'm using a 14Meg falcon with a SVGA monitor. Any help would be
appreciated.

CAUC (Coventry Atari User Club)

At long last, a time and date has been decided for the first meeting
of the Coventry Atari User Club. So if you are looking for a local
club supporting your machine, why not drop in?.

When: Saturday 20th July 1996.

Where: The Old Clarence pub.
(on the corner of Hearsall Common, on Earlsdon Ave North, opposite
the entrance to Broomfield Rd)

12 o'clock mid-day onwards.

As you will no doubt have guessed, this first meeting will be more
of an informal get-together than a meeting. It's hoped than plenty
of you will come along and show your support.

For more information, netmail or Email me...

LLAP.....

>
>Noticed that my provider had .lzh downloading as text not binary.

I found that Lynx causes this problem. It downloads LZH files as text rather
than binary, making them unusable. If you were using lynx, then this is
certainly what caused the problem.

I only wish I could get the problem fixed - it means I cannot download
any lzh files from WWW pages. I tried lynx on my provider's Sun and on my
TT030 - same problem both times :(

Anyhow, I suggest you try getting them with ftp rather than lynx (prehaps
use the toad mirror ftp://www.toad.net/pub/umich) and maybe it will work
then.

Of course if you were not using lynx then the problem must be somewhere else.

Hope that was of some help.

3320. ST mono monitor/VGA?

Newsgroup: comp.sys.atari.st
Date: 1996-05-22 00:00:00 UTC
From: nick@iipmail.demon.co.uk
Message-ID: <832883056_OASIS_@iipmail.demon.co.uk>
Source record: 144705

Two years or so ago I purchased a monochrome VGA, and adapter from Gasteiner (UK)
to use with an ST. This worked fine. However the monitor has since
failed, and so I recently purchased an Elonex mono VGA, thinking it
should also work with the nadaptor. However it boots in med res. with
terrible blurring etc. Anyone know why this is so... do I need to get
a different adaptor, or re-wire the existing one?
Thanks for any replies.

Yeah, but have you got a font with these characters actually in it? The only font that possibly could contain them and which I know of ist Bitstream's Cyberbit. And this one is not published yet. Maybe there are some Chinese TrueType fonts included in the Chinese version of MS Windows or something ...

>AFAIK Papyrus comes whith a auto programm to map the keys differently
>ore something similar.

The auto program is called CKBD. But the current version doesn't support any Unicode.

>It should be no problem making all chineese characters available through
>this.

papyrus' macro function is more usable for this purpose.

CL>
CL> I don't have any exact figures, but it wouldn't surprise me if
CL> the Falcon is the computer with most available D2D software.
CL> We've got Cubase Audio, Logic Audio, WinRec, RecFree, Q-Rec,
CL> AudioTracker, AudioMaster, GemRec, DigiTape, DIGIT-II, Studio
CL> Son and many many more.

When you want to build a HD-recording setup, it's impossible to get a Mac system unless you at least double the Falcon system's price - and that is for comparable systems. I'd definitely go for a Falcon setup again if I would have to choose between the two.
If my Falcon would break down beyond repair I would buy a new one instead of changing platform - even though many of the things in my Falcon can be used with a Mac as well.
If you have questions you need an answer for, please send an e-mail and I'll try to give you understandable answers...
I've been working with my Falcon+Cubase Audio for about 1.5 years now.

Best regards,

Claes

AFAIK Midi file format is pretty standard among most midi programs...
its the other formats that you need to worry about. So saving as a
MID files (Midi file) will allow you to load it into (hopefully) most
Midi programs.

They do indeed fit easily, and for that I thank you, especially for
putting up with low-techs like me who still use only 640pixel widths,
and force people like you with huge screens, to accomodate...
Thank you.

640pixels can be used by anything from and Atari ST up (Med res or
greater). So there are unlikely to be many people who can't read them
!

with windows etc. I suggest 72 chars... then the odd character isn't
chopped off the right.

>
>Oasis2 opens a text window for reading at full width, I have written to
>Phil asking him if it can open to the line length of the message body.
>
Wouldn't this mess up a window for people using lower res... when the
righthand side of the window is at 1024, and you only have 640 pixels
??? :) I presume the window will scroll ???

Also it might be nice if the editor/reader had an option to reformat
??? Not automaticly (this would mess up tables etc.) but at the users
discression... again the only way to do this at present is to reply
and open up your text editor.

I would like to get a removable HD drive (the Syquest EZ135 looks really good), and I was wondering what I need to hook it up to my Mega (soon to be upgraded to an STe Mega, or perhaps to a Falcon). I have an ICD host adapter (which I currently use for my HD) with driver software from ICD as well. What else do I need? Any help will be appreciated.

If this Atari market is to survive and maybe one day grow in some way,
then we all have to continue buying Atari product, magazines, etc...
ST Informer and Current Notes are good all around Atari magazines and
we should all continue subscribing and as Rod would say "Keep on
Keepin' On."

My Current Notes subscription just ended and I am about to renew along with re-subscribing to STI. Lets all keep this ball rolling.

I recently bought an Atari TT used really cheap. Thing is, the TT
isn't recognizing the hard drive. I think the drive is 40 megs or so.
Anyone have a suggestion why the drive isn't being recognized? I've
tried to select drive C.

Also, where could I find manuals on the TT and TOS? The seller didn't
have any manuals and I'm new to the Atari/TOS world.

btw- if anyone has a TT mouse or trackball they want to get rid of, I'm
looking to buy one :)

thanks
-kyle

Got every thing you need right now, if your Hard drive case is one of
those that has a 50 pin centronics scsi out port on it (looks like the
printer end of the printer cable will fit in it). If you don't have one
of these, then you can go the route I did and add one your self! If your
case only has one drive in it at present, then you need to buy enough 50
pin ribbon cable to reach from the ICD host to your present drive, then
to the spot you have picked on the case to add your scsi out port. You'll
need 2 of the 50 pin snap-on drive connectors for the host adapter and
you're present drive (just like the ones on your present cable) and a 50
pin scsi out port (make sure it is the centronics type) that accepts a
50 conductor ribbon cable on the inside part of it! Now the fun part!
Make a little template of the opening you will need and drill a whole lot
of little holes in a "straight" line all the way around the new opening,
Make enough clearance to get a hack saw blade in and cut out the rest,
then file to fit!
Or Buy a Link II, plug it in the asci out port and go to the
nearest computer store and get a 50 pin scsi to 50 pin scsi cable, plug
one end in the Link II and the other in the Syquest 135EZ and enjoy your
unskinned knuckles! It's late now and I can't remember if the 50-50 pin
cable came with mine or not! Sorry!

It was a game in which you were in a 3d wireframe environment (not Mercenary)as a soldier of some kind (ie you had a gun).. I think you went into the buildings and there was a rather odd method of travelling between cities...you'd go to some object in the city and be whisked away to another part of it..anyone know what it is (not Hunter either)?

3340. St midi files to Mac

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: g_boyce@alcor.concordia.ca
Message-ID: <4o1tb7$o65@newsflash.concordia.ca>
Source record: 144723

I am having a great deal of difficulty importing my Cubase files into Finale on Mac. I have followed directions previously posted on this group.

1. Format files either on PC or with PC formating software (tried both)

2. Copy midi files to that disc.

3. insert in Mac that has PC exchange in extension folder.

The results I have had are that Finale won't recognize the files as midi files. When I tried UU encoding them the UU program on MAC could not convert them.

The only method I have managed to work is to upload the files from my atari to the University mainframe then download them to my mac. This is obviously not an ideal method. The midi files are then completely compatible with Finale.

Any ideas what might be the problem here.

Thanks in advance.

3341. Wanted: Reasonable accessory prices (US)

Newsgroup: comp.sys.atari.st

From: dano@falcon.ic.net
Message-ID: <4o23iq$5s7@condor.ic.net>
Source record: 144724

I recently picked up a Mega STE and a couple of monitors. It's a great unit. Anyway, I have a SC1224, SM124, and switchbox. Right now, I can only use the SM124 until I get two montior cables.

Anyway, I call up Toad Computers, and Male to Male monitor cables (one for STE to switchbox, on for switchbox to montior) are $24 apiece! Twenty four bucks for a DIN cable? Granted, it's not a pinout I've seen too many times before, but $24 sounds excessive.

Now, if $24 is the going price, I apologize. I guess I'm just used to PCs where items like these are produced in such quantity that the cost is kept down. But, I'd be quite surprised if the cable sold for as much as a 520ST does now.

Is there a better vendor for Atari stuff, where I can get accessories at more reasonable prices?

-Dan

Mark,
I've been told that the JagLink has a hardware problem, which is why
Doom doesn't work very well. ID says it's Hardware, Atari said it
was software... Does BattleSphere use the JagLink, and does it work?

3344. FS (UK): ST games software - (S)

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: Steph@wuss.demon.co.uk
Message-ID: <832873112.8230.2@wuss.demon.co.uk>
Source record: 144727

I have a pile of ST games I need to part with. All are original, boxed and with manual/inserts. If you want to make me an offer for a few, feel free. We can always haggle.

Ishar I £7
Premier Manager II £7
Shadowlands £7
Zool £7

Heroquest £5
Drakkhen £5
Dragonflight £5
Legend Of Faerghail £5
Elite £5
Weird Dreams £5
Castle Master/CM II £5
GLoC £5
Shadow Dancer £5
The Bard's Tale £5

Klax (2 copies!!!) £3 each
Paladin £3
Demon's Winter £3
Rings Of Zilfin £3
Wizard Warz £3
1st Division Manager £3
James Pond £3
Fantasy Dizzy £3
Impossible Mission II £3
Spherical £3
Tetris (Original & best)£3
Hostages £3
Spellfire The Sorcerer £3
Hard Drivin' £3
APB £3
License To Kill £3
Deja Vu £3
Uninvited £3
Bloodwych Data Disk £3
Backgammon £3

* SPECIAL OFFERS! *

All four £7 games for £20
All ten £5 games for £30

All 21 £3 games for £15

All games above for £50. Go on! Treat the kids!!! If you take all the games,
I'll even cover the postage.

I have some ST related hardware to get rid of. If you want anything, but don't like the price, get in touch & we can discuss it.

1. Atari 1040 STe £150 (150 UK Pounds)

This has 4 Mb of memory installed, TOS 2.06 and a switcher (back to TOS 1.62 to avoid incompatibilities), HD disk drive (1.44 Mb), and the joystick/mouse ports have been moved to the back of the computer (where they should have been to start with!)

2. Link II SCSI connection cable for all STs. £30 (30 UKP)

3. External Cumana DD disk drive (800 Kb) £15 (15 UKP)

4. Forget-Me-Clock II with software £ 5

* SPECIAL OFFER! *

Buy all four together, and I'll part with them for £175 and even cover the postage.

Date: 1996-05-23 00:00:00 UTC
From: Katherine L Ellis <kellis@mtholyoke.edu>
Message-ID: <Pine.ULT.3.91.960523141939.17660A-100000@mhc.mtholyoke.edu>
Source record: 144732

Hi, I would like to run some European software, on the Falcon with my TV.
Most of the software are made for 50hz.
So if I run it the screen is scrolling vertically.
How can you correct that, what software can use? (if there's one..)
Bye..

3350. Re: Source for SCSI enclosures?

Newsgroup: comp.sys.atari.st

Source record: 144733

Actually, if that price estimate is close - it could be the 'better deal'. Largely this will depend on how many items you want the case to hold. I personally bought the 2 FH/4 HH model from Toad and think it cost $179 at the time (8 months ago). Now, the cheapest I've seen the same unit in COmputer Shopper is near $149.

When thinking of trying to piecemeal the parts & build another box, the prices I find in COmputer Shopper comes close to being near what I paid for a finished unit.

However, try calling Computer Gate at 408-730-0673. Ask for the 3 SCSI device case at $84.95 with 150W power supply & internal SCSI cabling.

Maybe that will help.

3351. 64bit Jaguar Atari Workstation?

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: zan660@aol.com
Message-ID: <4o2k04$huc@newsbf02.news.aol.com>
Source record: 144734

Why not put a couple of Jaguar chips on a mother board and build a new Atari, you can get a entire Jaguar for what-$100 (US). Of course you would have to build a new OS which runs on more then one chip like the Be OS which is small and fast but think about it.....a low cost workstation!!! The TT and Falcon do not have enough bang for the buck anymore.

Is a machine planned with the 68060 chip, it would still run all the old software and would be much better then a chip from 1979 (68000) or 1987 (68030)!!!!

You might want to try the following:
B&C Computervision (Stacy LCD screens)
408-986-9960
and ask for Bruce. They have some Atari parts.

The best source is BEST in California, but I can't come up with their address or phone at the moment.

Also try TOAD COpmuters here in Severn, Maryland at 410-544-6943. They have some items for the 400/800 lines but not much.

Source record: 144736

If you want to hook up to a Falcon, all you'd need would be the SCSI-2 cable. Buying the external version of the EZ135 provides you with the case, power supply (maybe a single cartridge as well.

For STe, then make sure the ICD host adapter is indeed a SCSI version such as their ADSCSI Host Adapter. With this you'd need a DMA cable to the host adapter, power source for the board, and a SCSI cable from the board to the EZ135.

Easier for hooking up to the STE, get a LINK II cable from ICD. No need for the host adapter then.

3354. Writing a St emulator for the PC

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: Florian Klaempfl <fnklaemp@cip.ft.uni-erlangen.de>
Message-ID: <4o1jh6$ema@rznews.rrze.uni-erlangen.de>
Source record: 144737

Hello,

is anybody interested to write a ST emulator for the PC?

I did some tests and a P100 is able to intpret (!) 68k code with the speed
of a 68000-8MHz. I write the code with a 32 bit pascal for the PC
(freeware and TP compatible).
For example a BRA 8 bit takes an equivalent of 6 68000-8 cycles, a MOVE.L D0,D0
12 cylces (not so good).

Please mail me:
Florian Klaempfl
fnklaemp@cip.ft.uni-erlangen.de

This should work, as I have often done this with no problems.

> The results I have had are that Finale won't recognize the files as midi
> files. When I tried UU encoding them the UU program on MAC could not
> convert them.

When you say Finale won't recognize the files as midi files, do you mean
that they are so corrupted, that when you load them into Finale, it
objects strongly.

OR, do you mean that you can't double-click on them & get Finale to auto
load the files.

If this is the case, it's because the files are not recognised; set up PC
exchange so that .MID files are 'mapped' as Finale files.
>
> The only method I have managed to work is to upload the files from my

Midi files are binary format, PC exchange should work.

> Bye..

You have to get a RGB monitor to run in both 50Hz and 60Hz. Some games
from Europe automatically go to 50 and American TV's just can't handle
it. I have a small 50/60Hz program that can toggle between the two, I
just typed it from a magazine listing and made it a TOS program. Hope
this helps...

I received this as part of am email from Chris at Computer Direct in Edmonton, Alberta, Canada. Very interesting if I may say so. Read and drool, and note that I am in no way affiliated with Computer Direct and am therefore posting this for your information only.

THeo

--- cut here ---
[...Removed by self...]

We have been busy developing the following...it has used up all our resources and energy...buy we are glad to be able to deliver it 6 months ahead of schedule!

Official Press Release:
May 5, 1996
Edmonton, Alberta, Canada.

New 68060 / 68040 based TT Clones from Computer Direct are now available!

The DirecT40 and the DirecT60 are based on the same motherboard design, simply swapping out the socketed 68040 and plugging in a 68060 results in an instant upgrade!

DirecT40 is a MC68040 33/66 MHz Atari TT clone. DirecT60 is a MC68060 60MHz Atari TT clone. DirecT40/T60 are housed in a PC style tower case which allows for up to 5 - 5.25" devices and 3 - 3.5" internal drives. This means that you will have plenty of room for SyQuest Drives, Tape BackUps, CD Recorders and Players and any other device that would require an open front drive bay plus you would still have room for up to three hard drives!

The open architecture design of the motherboard allows for interfacing with the low cost and readily available PC peripherals such as EIDE hard disks, SCSI hard disks, DD, HD, ED floppy disks, PCI and/or ISA ET4000 or Mach 64 graphics cards, SVGA/VGA Monitors, AT style keyboards and more! Adding memory is as easy as popping in PS/2 SIMMS! 8 memory slots organized in 4 + 1 banks allow for expansion right up to 1 Gigabyte! Hey, who needs a hard drive with a Gigabyte RAM disk!

All DirecT40/T60 enjoy the standard TT external ports, SCSI, Modem 1, Modem 2, LAN, MIDI in and MIDI out. For those who need cartridge port and ACSI (DMA) port we will be offering in the near future the DirecT40/T60 Plus which has a full ST compatible I/O card.

Technical Specifications:

Case:

Full size tower case with 6 - 5.25" open front bays (one is used for floppy), 3 - 3.5" internal bays, 250 Watt power supply, dual fan ventilation system, CSA / UL approved.

Dimensions: 620mm (H) x 190mm (W) x 455mm (D) Weight 2.5 Kg.

Installed Peripherals:

Keyboard: AT 101 key.
Floppy: 1 with DD, HD and ED compatibility.
Hard Drive: Quantum 850 Mb EIDE Hard Drive.
Memory: 4 Mb minimum, expandible to 1 Gigabyte via 8 slots, 72 pin (PS/2) SIMM.
Video: ISA bus ET4000 graphics card with 1 Mb DRAM and NVDI ET4000 driver,
Resolution: 640 x 480 x 16.7 Million Colours, 800 x 600 x 65K, 1024 x 768 x 256 and 1280 x 1024 x 16 colours.
(expandible to PCI bus ATI Mach 64 with up to 4 Mb VRAM.)

DirecT40 Technical data:

Processor: MC68040 33/66MHz
Processing Power: 29.5 MIPS
Comparison: TT030 - 7 MIPS Factor Increase: over 4x's
Falcon030 - 3.74 MIPS Factor Increase: over 7x's
ST - 1 MIP?? Factor Increase: over 29x's

DirecT60 Technical data:

Processor: MC68060 60MHz
Processing Power: 120 MIPS
Comparison: DirecT40 - 29.5 MIPS Factor Increase: over 4x's
TT030 - 7 MIPS Factor Increase: over 17x's
Falcon030 - 3.74 MIPS Factor Increase: over 32x's
ST - 1 MIP?? Factor Increase: over 120x's

MIPS is Millions of Instructions per second and is used to rate processing power and speed.

Internal ports:

4 PCI-bus slots
2 ISA-bus slots
1 VME-bus slot
1 EIDE (enhanced IDE) with max. 10MB/s for 2 devices
1 SCSI with max. 4MB/s for 1-7 devices (TT compatible)
1 floppy (DD/HD/ED) d.h. max 2.88MB

External ports:

Modem 1 (25 pin Dsub-connector) with max. 19,200 baud
Modem 2 (9 pin Dsub-connector) with max. 250,000 baud
Local talk (8 pin Mini Din) with max. 250,000 baud
Printer 25 pin Dsub (TT/Falcon-compatible)
Midi-In/Out
PC keyboard connector (standard)
mouse and joystick (Atari compatible)

Pricing Information:

DirecT40:
The complete system, including medium height tower case, 68040 processor with FPU, 4MB RAM, 850Mb hard drive, floppy drive, graphics card, PC-keyboard and mouse is $3799.99 Cdn. or $2739.99 US. or less**. FOB Edmonton.

DirecT60:
The complete system, including medium height tower case, 68040 processor with FPU, 4MB RAM, 850Mb hard drive, floppy drive, graphics card, PC-keyboard and mouse is $4499.99 Cdn. or $3239.99 US. or less**. FOB Edmonton.

** Please Note, since these machines use standard PC/IBM compatible peripherals, due to market conditions on these parts the actual street price will vary, usually downward as the trends on these parts are following this path currently. Check with us for daily pricing.

Dealer enquiries are welcomed.

Other configurations are available on request! Every DirecT40/T60 is custom built by Computer Direct. This allows us to build the system that you want, not the system somebody wants to sell you!

Compatibility:

DirecT40/T60 is fully compatible with all cleanly written GEM applications that run on a stock TT. Software which accesses hardware directly will not run. Some examples would be Warp 9 (VDI) and Software which requires TT High, cartridge port and ACSI (DMA) port. DirecT40/T60 Plus motherboards will overcome many of these problems due to the integrated ST I/O card which contains the original Atari hardware. DirecT40 and T60 have been tested extensively with the following software:

Please note: Products with known bugs on ST/TT are still listed as Yes, these programs still exhibit these bugs on DirecT40/T60 but are just as useable as on an ST/TT. Comments are added for some problem apps. Comments followed by "*" refer to DirecT40/T60 Plus motherboards with ST I/O card.

3362. Neodesk 4 Problems

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: thoth@gmgate.vircom.com
Message-ID: <4o0s0t$6dp@rcogate.rco.qc.ca>
Source record: 144745

I recently purchased a copy of Neodesk 4 with Geneva.

Since installing this version of Neo, though, I've been plagued by a lot of system crashes. The system now crashes at the end of every download, and programs such as Mountain Reader II won't even load up (two bombs).

Have any bug fixes come out for Neo4, or should I be re-configuring my system? I have a Mega/STE 4 with the following programs in the auto folder: Gbell, Silkmouse, HSModem, Datalite, JarXXX.prg, Neoload.prg, Selectric.

: Is a machine planned with the 68060 chip, it would still run all the
: old software and would be much better then a chip from 1979 (68000) or
: 1987 (68030)!!!!

Medusa Systems offers two 68060 machines that are available from Toad
Computers. Check this out...

TOAD COMPUTERS ANNOUNCES NORTH AMERICAN RELEASE OF HADES AND MEDUSA!!

Medusa Computer Systems of Switzerland was one of the first companies to
produce an Atari "Clone." Their Medusa-T40 was the first Atari-compatible
computer to use a Motorola 68040 processor. The new Medusa T-60 and Hades
computers are the first Atari-compatible computers to use the new Motorola
68060 processors.

Toad Computers is pleased to be the official North American distributor for
the Hades and Medusa. Packed with features and faster than any other Atari
machine out there, the Hades and Medusa are a dream for hackers and
hobbyists -- and for anyone who wants to take advantage of some serious
processing speed!

==========
:: HADES: It's hellishly fast!
==========

Hades is packed with standard features, including:

MOTHERBOARD FEATURES
- 4 PC/Mac Compatible PCI Slots
- 2 PC Compatible ISA Slots
- 1 TT Compatible VME Slot
- 1 Enhanced IDE Port (Up to 2 Devices)
- 1 SCSI (TT Compatible - Up to 7 Devices)
- 1 Floppy Port (DD 720K, HD 1.44MB, ED 2.88MB)
- Modem 1 Port (25 pin, 19200 bps)
- Modem 2 Port (9 pin, 250000 bps)
- Localtalk Port (8 pin, 250000 bps)
- Printer Port (25 pin, ST/TT/Falcon Compatible)
- Midi IN and OUT Ports
- TOS 3.06 (Slightly Modified)
- PC Keyboard Port (Use any PC keyboard!)
- Mouse and Joystick (Atari Compatible)

INCLUDED IN THE BASIC HADES SYSTEM FROM TOAD COMPUTERS
- MC68040 32/64MHz Processor
- 1.44MB Floppy Drive
- PC Keyboard
- Beetle Mouse (choice of color)
- Full Size PC Tower Case
- 1.3GB Enhanced IDE 3.5" 9ms Hard Disk
- PCI 1MB DRAM ET4000 Graphics Card (up to 1280 x 1024)
- NVDI 4 for ET4000 Graphics Cards
- Hard Disk Driver Software
- 4MB RAM

Toad's Basic Hades System w/68040.....$2499.00
Optional MC68060 60MHz CPU.....Add $ 649.00
Optional MC68060 66MHz CPU (avail. Fall '96).....Add $ 749.00
Additional 4MB RAM.....Add $ 99.00
16MB RAM (instead of standard 4MB RAM).....Add $ 250.00
Internal 4X CD-ROM Drive (SCSI).....Add $ 199.00

All you need is the Basic Hades System and a standard VGA monitor and you have a blazingly fast Atari-compatible computer that can run rings around most anything out there. Other options are available! Call us at (410) 544-6943 or (800) 448-8623 for more details!

==========
:: MEDUSA: Three buses, up to 100 MIPS -- how can you go wrong?
==========

Medusa gives you incredible flexibility and performance. Features include:

MOTHERBOARD FEATURES
- 6x main-bus, 32bit data, 32bit address, 32Mhz (85MB/sec)
- 4x ST-bus, 16bit data, 24 address, 8Mhz (4MB/sec)
- 2x RAM-bus, for more than 128MB main memory
- Up to 128MB, with card max. 4GB
- ROM 0.5-2MB, 32Bit data, 100ns

ST I/O DAUGHTERBOARD FEATURES
- Printer Port (centronics-parallel)
- Modem 1 Port (RS232C) up to 115,200 baud
- MIDI In and Out
- ISA-bus 16-bit (internal) for graphic card
- IDE (intern) for ATA-harddrive (max. 2)
- ST-Sound (Yamaha YM2149A Chip)
- DMA (ACSI)
- Serial 1 Port (RS232C), as on TT030
- ST/TT-keyboard connection
- Floppy-bus (internal) for DD, HD, or ED Drives
- Battery Supported Clock

INCLUDED IN THE BASIC MEDUSA SYSTEM FROM TOAD COMPUTERS
- 1.44MB Floppy Drive
- Mega STE Keyboard

- Beetle Mouse (choice of color)
- Full Size PC Tower Case
- 1.3GB Enhanced IDE 3.5" 9ms Hard Disk
- PCI 1MB DRAM ET4000 Graphics Card (up to 1280 x 1024)
- NVDI 4 for ET4000 Graphics Cards
- Hard Disk Driver Software
- 4MB RAM

OPTIONAL COMPONENTS
- SCSI card (TT compatible), 4MB/sec
- VME-bus-card with ROM-port
- Cartridge Port Card

Toad's Basic Medusa System w/68040.....$3499.00
Optional MC68060 50MHz CPU.....Add $ 899.00
Additional 4MB RAM.....Add $ 99.00
16MB RAM (instead of standard 4MB RAM).....Add $ 250.00
SCSI Card (TT Compatible, 4MB/sec).....Add $ 449.00
VME Card (TT Compatible).....Add $ 399.00
ST Cartridge Port Card.....Add $ 149.00

Because of Medusa's unique 3-tiered bus design, it can run faster than Hades (or any other machine out there). Software that's compatible with the TT030 generally works on the Medusa (and the Hades, too).

For more information on the Hades, visit Medusa Computersystem's Homepage at http://www.ee.ethz.ch/~caschwan/medusa.html. Other Medusa/Hades information will also be available this week at http://www.toad.net.

We expect to have stock by 5/30/96 -- place your orders now to insure that you get one from the first shipment!

Thanks! Stay tuned for more ST News soon!!

3364. Re: Source for SCSI enclosures?

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <ZbAtyek.greg_evans@delphi.com>
Source record: 144747

Dan,

I recommend picking up a copy of Computer Shopper. There are several advertisers that specialize in cases, although SCSI cases are rarer than the standard PC case. I'm using a PC mini-tower to house all my SCSI drives hooked up to my Falcon and it works fine. Of course, I have to set IDs with jumpers but it's not too big a deal -- just do it once. I've got a tape drive, Syquest 270, Conner 212, Quantum 1 gig and 2x CD Rom drive all chained together with a ribbon cable and fed by the SCSI 2->SCSI cable from the Falcon. I even have a SCSI splitter to hook up a flatbed scanner.

Greg

3365. Re: St midi files to Mac

You wrote

<....You could set up your Atari as a BBS and then access your files with the MAC. Using STalker, you can install a mini BBS that is usable with command line stuff... should work...>

How would this link up? Can I hook the Mac directly to the Atari serial port to serial port?

3366. Falcon Speed

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <Z5CsSYq.greg_evans@delphi.com>
Source record: 144749

I have version 6.2 of Falcon Speed and am having a problem getting it to recognize my DOS partitions. Apparently, ther problems are twofold:
1) The DOS partitions must be on SCSI id 0.
2) There cannot be any BGM partitions in front of the DOS ones.
My intention was to dedicated a Syquest cartridge (270 mb) to several DOs partitions, but the drive is the last hard drive in my chain. By this method, I can use the Syquest for DOS, TOS or Linux as needed. It doesn't make much sense to make this drive the first in the chain and it also doesn't make sense to me to create severla DOS sized partitions on my first drive. If I made enough to satisfy my DOS needs, TOS wouldn't start until partition I, or so, and I'd run out of partition letters to use.

Is there anyone from Compo or sack that has a patch to let Falcon Speed read beyond drive 0 and past the BGM partitions?

Greg

I just payed $20.00 for a 50 pin to 50 pin Centronics style SCSI cable at
BEST BUY! Believe me when I say that these are a lot higher volume item
than ST monitor cables! I don't think that you will find them at a lower
price anywhere else, at least not new! You could try Best Electronics in
San Jose, CA or any of the 5 or 6 Atari dealers still in existance, or
the only other alternative is right here on usenet or shop the garage
sales and hope!

On 23 May 1996, Dan Mowczan wrote:

Hi,

ROBERT MEEK (robert@absence.demon.co.uk) wrote:
: I work in the media department of a further education college in the
: UK. We have an Atari ST which (apparently) used to run soundtools
: using a SCSI HD. Unfortunately we seem missing some of the bits to
: make it work. Not being an Atari or SCSI expert, this is what I know :
: There's a 19-pin d-type connector on the back of the atari and we have
: a 1Gb Seagate Hawk SCSI HD. There is no housing box or power supply
: for the hard drive, and no lead or adaptor to go from the back of the
: atari to the centurix connector on the SCSI drive. Any ideas on what
: we need, where we might get what we need (ideally in Europe) or are we
: wasting our time ?
Certainly not. All you need is a housing box and power supply, and a
host adaptor to translate the Atari's ACSI interface to SCSI. Such adaptors
should be obtainable at any Atari dealer. To pick one have a look into
some Atari magazine. Sorry I can't be more specific, but you'll hardly
need to order the stuff from Germany, and I don't have any English
addresses. But it's really straightforward. You shouldn't have to pay
more than one hundred pounds for it all, including hard disk driver
software. Probably less.

So long

3371. PC keyboard for ST

Newsgroup: comp.sys.atari.st
Date: 1996-05-23 00:00:00 UTC
From: jmarshal@music.gla.ac.uk
Message-ID: <Drv9B1.60@udcf.gla.ac.uk>
Source record: 144754

Hi there,

Does anyone have any suggestions on how to connect a pc keyboard to my ST.
The keyboard has a PS2 type connector.

I believe that there are some hardware solutions to this (Z-keys or
something) but I don't know where to find these in the UK.

Also is there a software solution that will let me plug the keyboard
directly into the serial port as I've seen this done on a pc before.

Any help would be appreciated.

Jonathan

SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

3374. Re: printer driver needed

Newsgroup: comp.sys.atari.st
Date: 1996-05-24 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk>
Message-ID: <31A5C38B.D9F@sunderland.ac.uk>
Source record: 144557

Hi,

I've been using a BJ-200ex for some time now and have found that the best compatability with the most programs can be achieved by using Epson LQ drivers and setting the dip switches on the printer to Epson emulation. This usually produces a print out just as good a the Canon drivers with those programs that have both. The same is true if you are using NVDI drivers.

The BJ-200ex does have an automatic emulation switching mode, but this has never worked for me :-(

Hope this helps,

Michael

3375. Hades Tt Clone

Message-ID: <832959735.MC9931@mclink.it>
Source record: 144558

If someone is interested in the tecnical specifications of the new
Hades Atari TT Clone, I suggest to visit the Medusa Computer Systems
Web page, where it is also possible to find a list of all compatible
software. Basically all the TT compatible software should run without
problems.
Web URL is http://www.ee.ethz.ch/~caschwan/medusa.html
The specs look the same of those of the Direct 40/60 new TT Clone (from
Computer Direct of Canada).
Are the same computer under different names?

Lodovico

3376. Seeking TurboSynth

Newsgroup: comp.sys.atari.st

Its amazing - I posted requests to other newsgroups and all I get are
other people looking for a copy also. It isn't available new anymore,
so I'd like to beg, borrow, steal, trade or purchase a copy from
someone. That would be TurboSynth for the Atari ST.

Thanks and have fun! - Bob

Message-ID: <4o2uak$c9q@newsflash.concordia.ca>
Source record: 144608

Gerry O'Rourke wrote

<When you say Finale won't recognize the files as midi files, do you mean that they are so corrupted, that when you load them into Finale, it objects strongly.>

I think this is the case. The files are selectable there is an error message that comes up. Recently I have found that even putting the file on the disc which has been PC formatted makes the Mac reject it as unreadable. I don't understand why even text files such as UUE can't be read without corruption. When I loaded the same files into a PC it had no problem reading it.

Is there a special method for saving the midi files on the Atari?

Do I have to do anything with PC exchange other than have it installed.?

I bought a second Jag to have two-player games (e.g., Doom) and got the
JagLink. It didn't work (I couldn't even get one second of play).

I was told that the Catbox would probably work better so until I get
another one (I have one already), my brand new Jag just sits there.

The problem with Doom is probably just buggy code. Maybe I'll consider
hooking the Jag's together later. It's funny... I could do a multi-computer
hook-up with either the PC or the Mac and it's easier to implement than on the
Jag. At least I got Doom, Descent, and Marathon to do multiplayer without a
hitch.

: >Thanks.....Ron L
:
: Pins 4 and 5 of the atari MIDI sockets are used as a non-standard 'THRU'.
: This means that you can for example control an external module from your
: MIDI keyboard without having to start up your sequencer program or rewiring
: the MIDI cables (bypassing the ST) just to be able to play around a bit
: with that external module/keyboard.

I don't know if this matters or not in this so if I am way off topic LET
ME KNOW! I have a MIDI cable that was from parts from Radio Shack and an
old Keyboard cable. My dad had a keyboard that was DEAD and I got the
two ends at Radio Shack. He cut the ends off and then sodered (sp?) the
wires into the sockets. IT WORKS GREAT!

: I've made a small box where a switch controls MIDI THRU 'software
: controlled (the usual way), or MIDI THRU 'hardware controlled' (by
: utilising pins 4 and 5). By the way, the computer has to be switched on for
: MIDI to be able to pass through the sockets because of the opto-isolators.

Hi, I thought a TV was a RGB monitor.
Apparently VROOM030 switch automatically in 50HZ. I did try once an auto
prg that switched between those frequencies, but it was made for ST,
so on the Falcon..... BOMBS AWAY!!!!! (The prg was go5060.prg or
something like that)
What should I do?
Thanks..
Bye.

How did you test that? What were the symptoms?

> I have heard that there was a retrofit ROM (3rd party) that fixed this
> problem, but I have no idea where to find it.

That's the first time I hear this, and I strongly believe it is not true.
I upgraded my SH205 from 20 to 40 MB without any problem, and I know
a lot more people did the same.

The ROMs in the SH205 are from Adaptec and are part of the
Adaptec 4000A hard disk controller which is specified to take just
about any type of MFM drive, according to my original controller
documentation.

>
> That`s right. AFAIK there is no FPU emulation yet.

There is, and I should know because I put it there ;-)

But the publicly available kernels have a bug which
prevents it from being installed.

Look at http://www.esat.kuleuven.ac.be/~coene/files.html
instead.
Linux should provide a good alternative to using
CAB/STiK/WWW130 and all those things on the Falcon/TT
or any Atari with >=68030 processor, with full-featured
ftp, telnet, irc, email,WWW browsing (Mosaic under X,
Lynx, Arena, Chimera)
You'll need a lot of memory for X Windows though.

Paul

3390. MGE Graphics card drivers

Newsgroup: comp.sys.atari.st
Date: 1996-05-24 00:00:00 UTC
From: glassnet@demon.co.uk
Message-ID: <832936710.1629.0@glassnet.demon.co.uk>
Source record: 144621

Hi..

Is anyone using the MGE graphics card in their Mega ST's for large screen display ? I'm in search of the latest drivers (running 1.3 currently) to see whether I can get passed a problem I am having trying to get Cubase 3.1 to run on the large screen. Is there an ftp site with drivers etc available for the ST..?

I've been on to Maxon but unfortunately they have no archives with any MGE drivers around... now hoping that Usenet will save the day !

Looking forward in anticipation,

Thanks chaps..

Clive (chumble@glassnet.com)

YES! Lynx will download a .lzh file as text if you tell it to!
At least on lynx for my VAX, (which is essentially the same)
If you hit right arrow for a file type it doesn't recognize,
it will TRY to download it as a text-file i.e.ASCII, and the result
is GARBAGE. If you use "d", it forces a binary d'load. This
does work! I *believe* that you can change lynx.ini to include
.lzh files as a recognized BINARY file type.

The magic_PC demo is on toad computer's web page. I have tried it and
__IT WORKS__. One truely amzing program. It seemd kind of slow, but I think I
had set the amount of RAM for Magic too high. (I was working on an 8 Mb
machine and windoze 95 has a had time with that to begin with). I will
"GEM Bench" the demo when I get a chance.

Gee an operating system taht gives a consistent interface and software on
THREE differnt hardware platforms. I bet Bill Gates is worried :-^)

Thanks for all the suggestions. I ended calling 1-800-4-HALTED, a surplus company, and getting 5.25" half height enclosures with Centronics connectors, power supply, and ID switch for $24.95 apiece. They were apparently used before, but it's hard to beat that price for a complete case.

Its not the hardware. Doom doesn't have any error recovery routines,
and so as soon as an error occurs (as happens with most networks) then
it just gives up, and says 'Network Failure'. PC Doom of course, relies
on the network drivers on the machines having built in error recovery...

It seems that Atari is not the only company that uses this type of connector for the monitor.While at a Car audio store I saw a familiar cable so I asked to see the cable and sure enough it was the same cable round 15 pin Atari monitor cable or Kenwood CD changer cable.Since it is demand and the supply is great this cable was $12.99.It is also a nicer cable .It has GOLD plated pins and connector and seems to be alittle longer.I am assuming that it is shielded because it is for audio.So check out your local car audio place for a Atari monitor cable.

Try using Supra Hard Disk Utilities to format the drive. Supra lets you designate the number of heads, cylinders, etc. Once you have "pre-formatted" the drive, you can use AHDI 3.x to format and partition it "Atari-style" (NOTE: DO NOT USE earlier versions of AHDI that ask you to specify what type of Atari drive you are using; AHDI 3.x does not ask for this information - it "scans" the drive and formats according to the number of cylinders, heads, sectors, etc. found in the boot partition.)

The only strange thing about this method is that I had "ghost" partitions - the utilities showed I had EIGHT partitions even though I only had FOUR! I think that the SH204 logic chip must have seen one 20 meg "chunk" and then another 20 meg "chunk" of a 40 meg hard disk. All the four partitions were perfectly usable - no problems whatsoever.

I'm trying to create an ATARI ST theme for windows 95 for all those ST users who migrated to the PC but still miss the old GEM!

I would be gratefull if you could mail me with screen shots of the desktop in any resolution (i'd like to get a collection of all resolutions). The version of TOS doesn't really matter!

A screen shot of all the icons (including mouse pointer and busy bee) would also be helpfull.

If you do mail any pictures, please ensure that they are in a PC readable format, preferably GIF's or JPEG's.

Hope you can help!

Gitesh.

Hi there,
I believe the font checking is there for a reason and the better thing to do
would probably be to remove the fonts that cause trouble. Anyway - I did remove
all supposedly bad fonts when I upgraded to NVID4.

Best regards,

Claes

I've found out the hard way, that not all the pins are connected to leads
in the cable (on the Atari monitor cables) and that the pins connected are
different on colour and mono. Perhaps the Kenwood cable is thoroughly
connected, and there would probably be no harm in that.

...
>
>Do you have a version of hardcopy.prg, hardcopy.rsc that uou can
...

Thanks for the offers of Hardcopy; I now have one that works better than
mine, though it still does not write in the Metafile extents.

When I put these in by hand, Timeworks publisher V2 is happy with the Gem files
and I can produce postscript from Timeworks - small thing print fine
large things take forever to print, though Ghostscript is quite quick
to produce images, even on the ST.

mfps still won't accept the Gem files - it starts to produce a
postscript file from the Gem, then crashes.

So, my next question is " does any one know the file formats for :

Cad3D.v2 .3d2 files,
Cad3d.v2 .SIF (sequential image) files
GEM header (first 20 or so integers)

In the Gem header I have deduced that integers [5,6,7,8]
(counting from 1) are the Metafile lower,upper limits.

For the output of Hardcopy I set (16 bit integers)[7,8] to be 20479 32767.
(or in bytes : [13 to 16] set to be 255 79 255 127).

This nicely fills the box in Timeworks when loading the image.

Thanks for the (4) offers,

cheers
beau webber

Toad tends to be way-overpriced even for common items. But if you need
an Atari-unique item, there aren't many other places to go.

>

Hello there,

which version are you using? The early Neodesk4 and Geneva releases
contains many bugs. A lot of then are removed in the release 4 of
Geneva and release 3 of Neodesk 4.
I'm sure you can find these releases on many ftp-sites (maybe
ftp.toad.net) or you can purchased then from Gribnif software for US$5
each.
I haven't any experience with Mountain reader II. I tried the demo
version on my TT and it seems to work (at least it starts without
bombs).
An other possibility is that some acc or autoprg doesn't work very
well with Geneva/Neodesk.
HSmodem6, JarXXX.prg, Neoload.prg and Selectric won't give any
problems. I don't known Gbell, Silkmouse and Datalite.
Also make sure that the fastload flag of the first (not sure of that)
and last acc is set to off. The same goes for the last autofolder prg.

Hi Xav!

m> I used to use the SpeedoGDOS driver - you just print straight to it and
m> everything works fine (you can even have STraight Fax software detect
m> and send it automatically). I've now got NVDI4, so I assume that I have
m> to use the IMG driver for it (which hasn option for 198 dpi ;) but as I
m> recall this will then need to be sent manually. Does anyone know if
m> there is (or if anyone is working on) a Speedo style driver for NVDI so
m> that I can just print to STraight Fax as before?
Err, why not try the Speedo driver with NVDI? Just add the driver into your
Assign.sys file. :)))

Speak to 'ya later!

Newsgroup: comp.sys.atari.st
Date: 1996-05-24 00:00:00 UTC
From: DCroker@mettav.demon.co.uk
Message-ID: <13124_DCroker@mettav.demon.co.uk>
Source record: 144652

Hi Alistair!

A> Maybe a silly question, but how hard would it be to write a very
A> basic HP Control Panel for the Atari? No fancy icons, just text and
A> options? I'm sure it's a problem that will come up again.
The big problem is knowing what the control codes are...

The font and page size etc codes are well known, but not the colour cartridge
alignment ones, you get the picture? (g)

Speak to 'ya later!

Date: 1996-05-24 00:00:00 UTC
From: andy@allatsea.demon.co.uk
Message-ID: <371_andy@allatsea.demon.co.uk>
Source record: 144654

Hiya Phil.....

Your last game of Scrabble mailed this to All.....
p> i)where the item is being sold from
p> ii)where the seller wishes the item to be purchased from
p> iii)what it is that is being sold
p>
[cut]
p> If you disagree with any of the above, please post here.
p>
all this is a good idea!..... but!..... aren't there enough for sale
echos?.....

as far as i can see, selling in here would only be an advantage if you
wanted to sell internationally?..... otherwise use a "local"
echo?.....::-))

this is not a complaint BTW as i don't mind having a flip through FS's to see
what's selling and where, however there must be a lot who do take this echo
who'd rather not see *any for sale messages?.....::-)))

Bye for now.....

Such a machine was rumoured to have been in the works by Atari before
they discontinued development.

> Is a machine planned with the 68060 chip, it would still run all the
> old software and would be much better then a chip from 1979 (68000) or
> 1987 (68030)!!!!

There are a few 060 machines in circulation - the Medusa T60, Hades, and
one other i cannot think of (think up a name from ancient Greek legends
and you might be right on the money namewise)

For anyone else looking for basic SCSI cables and stuff, I have a source called
Rodgers Systems Specialist there web page is
http://www.RogersSystems.com

They have great prices on you cables you need, reciently spent about $50.00 for what would have cost hundreds in the local stores.
for example

6 ft 50 pin SCSI to 50 pin SCSI cable $7.00 each, local price runs from about $15-25 dollars for the same cable..

6 ft Null modem cable for TT (DB9/DB25) $3.00, local price normally about $9.00

THey offer very quick shipping.. I'd recommend them.

Well, I finally got the DeskTopper kit I ordered from Toad Computers... I like it! Finally, I've got my Falcon in a separate case/keyboard. Its very easy to put together--I tend to be very slow and cautious with my computers and yet I was able to do the whole thing in around 35 minutes.

Now, can anyone tell me where I can get the PowerUp kit? Toad says that they've been unable to get it...it would be nice to move the power and reset switch up front...Thanks in advance for any info! :)

Hi,

I am trying yo get in touch with Olaf Meisiek the author of the
excellent resource editor Interface.

I am using the Mydials resource extension routines in OASIS 2 and can't
use the 3D options because the GFA Basic version of the Mydials software was
compiled in such a way that I can't send the 3D on/off flag when Mydials is
initialised.

If yopu are reading this Olaf, or someone knows how I can get in
contact with him PLEASE e-mail me.

Thanks in advance.

The problem is in the hardware as well as a buggy networking code from ID. Networking alone on the Jag is a real bitch as I understand it. BS will support the Catbox for up to 8 jag networking and jaglink for 2 player networking. The guys at 4Play have gone out of their way to make the networking work, and it really works well. Virtually no crashes.

> very easy to put together--I tend to be very slow and cautious with my
> computers and yet I was able to do the whole thing in around 35 minutes.

I've just got my Falcon put into a Desktopper as well, but because I had the audio mods done at the same time, I got an ST engineer to do the lot for me. I also had AT Keys installed, and added a Cherry keyboard, which is a joy to use after the not so good Atari keyboards.

> Now, can anyone tell me where I can get the PowerUp kit? Toad says that
> they've been unable to get it...it would be nice to move the power and
> reset switch up front...Thanks in advance for any info! :)

I got my Power Up kit from System Solutions in the UK. Actually, the stuff supplied in the kit is nothing special, and you should be able to get ALL the bits from any decent electrical store. Sys Sol sell the kit for about GBP 15.00, and I guess they will ship your way for about GBP 8.00 (Which is a bit expensive really).

One thing which I also had done was to move the floppy to one of the slots at the front of the Desktopper. The kit of cables etc for this was about GBP 20.00, and it has made a big difference, as I can put the 'topper up on a shelve and forget about it for most of the time. Again the stuff in the Floppy kit can be easily sourced from any good computer/electrical shop.

Unfortunately the instructions supplied with my Desktopper were totally inadequate, and my engineer (who is one of the UK's leading experts on Ataris) had to refer to other documentation he had for certain aspects of the installation with regard to electrical and cabling connections.

If you want any further info, please let me know and I'll try and help as much as I can.

ATB
Mike

PM> It's unfortnate that we humans have cultural differences
PM> between us.

RT> IDIC. Infinite diversity in infinite combination. Without
RT> it, cultures stagnate and die.

You got me there! The thing that makes us strong, also tears us
apart. But, wrong conference for this thread... :)

RT> AIUI, Thing _will_ be translated - but it hasn't been released
RT> in an English shareware version yet. I imagine that Arno will
RT> reap some significant benefits when it is released.
RT> Meanwhile, I'm _very_ happy with Teradesk - and it's freeware.

I'm more concered about, oh, 100 different software titles I _might_
be interested in, but can't use (well) because I can't read them. I
think this whole thread might possibly turn folks off to translating
anything any more, & that's too bad.

For example, I thank the author of HSModem6 for his efforts to
include some English info on his program. I can't make heads nor
tails of it, but I see some English-speaking folks have figured it
out, & with their help I might be able to use the program. I wish
someone would translate the whole German text files into English, so
that I might understand it myself.

I think all the specifics of Thing have been discussed here.
Whatever. It was the whole negative addittude towards translating
anything that made me :(.

My server supporst Slirp, I don't know if theres any difference,
anyway, no one of the Atari Internet programs work, I have even used
HSmodem, etc. they all seem to try to connect and then nothing else happens.
Is it me or my server? Regards!!

Message-ID: <4o7trm$m4b@laplaza.taos.nm.us>
Source record: 144577

>The BJ-200ex does have an automatic emulation switching mode, but this
>has never worked for me :-(

The BJ-200 will auto-switch modes when it receives an ESCape sequence or imbeded control code for the desired mode (BJ-10 or LQ). Programs that use the printer in a graphics mode, like Calamus or Speedo, don't send control codes.

For example if the printer is set for auto-emulation and it receives the ESCape code ESC,x,0 (dec 27,120,0), it will switch to HS LQ mode. ESC,x,1 (dec 27,120,1) will put it in HQ LQ mode.

When I first got my BJ200 I wrote a DA to switch emulations and change fonts. I uploaded it to GEnie but I don't think I ever put it on the net. If anyone would like a UUE encoded copy emailed to them, let me know.

3447. Is MultiTOS MiNT ???

Newsgroup: comp.sys.atari.st
Date: 1996-05-25 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <833132066_OASIS_@phil4.demon.co.uk>
Source record: 144582

I've got MultiTOS and have been reading about how its not the MiNT
part thats slow, but the AES. This leads me to believe that MultiTOS
includes MiNT. Is this true ???

Also can I use the MiNT part to run Un*x software ??
If so how.

BTW: I'm not interested at the moment in any network software, or web
browsing or stuff, just simple stuff like disk formating, and other
really simple software.

Any suggetions grateful !

ATb.

In article <1996May21.161706.19041@freenet.victoria.bc.ca>
wl712@freenet.Victoria.BC.CA (Ron A. Lukawitski) said:-

>
>Hi
> I.m using Notator SL on my Atari 1040ste.In the manual it says" to avoid
>at all costs a plug whose end pins(called "1" and "3") are soldered
>across to the neighbouring pins("4" and "5").....could anyone out there
>in atariland shed some light on this recent bit of info that I just received.
>
I've just found the following in my Atari manual:

|

Pins are: 3 1
5 4
2

Midi in: 1=Not connected
2=Not connected
3=Not connected
4=IN Recieve Data
5=IN Loop Return

Midi out: 1=THRU Transmit Data
2=Shield Ground
3=THRU Loop Return
4=OUT Transmit data
5=OUT Loop Return

So as long as the midi in lead, doesn't carry any data from the midi
instrument on pins 1 & 3 then no problems.

However if its the midi out lead, then according to the above diagram,
you would have the OUT Transmit connected to the THRU Transmit...

This I would guess would cause the signal to be passed THRU to other
instruments in the midi loop and cause problems (?).

Hope this helps !

ATb.

3449. Re: PC keyboard for ST

Newsgroup: comp.sys.atari.st
Date: 1996-05-25 00:00:00 UTC
From: playback@coconut.demon.co.uk
Message-ID: <833117012_OASIS_@coconut.demon.co.uk>
Source record: 144584

Hi

>Does anyone have any suggestions on how to connect a pc keyboard to my ST.
>The keyboard has a PS2 type connector.
>
>I believe that there are some hardware solutions to this (Z-keys or
>something) but I don't know where to find these in the UK.

AT Keys supplied by System Solutions at GBP 49.95 is what I am using to connect a Cherry PC keyboard to my Falcon. Solutions are on 0181 693 1919 if you want to give them a call. They're not cheap, but the unit does work very well. Only thing is that it doesn't come in a nice little box, as it is really meant for installation into a Desktopper or Tower system, but a cheap Maplin box should suffice. You will also have to remove the keyboard processor from your ST and put it in the socket provided on AT Keys, which also has new mouse and joystick ports as well. There are four wires to be soldered as well!

>Also is there a software solution that will let me plug the keyboard
>directly into the serial port as I've seen this done on a pc before.

Sorry, this is new to me.

>Any help would be appreciated.

Hope I have a bit :-)

First of all, thanks for replying! <g> Since you've already been thru
this let me ask you a couple of questions...I also want to move my
floppy to one of the front 5 1/4 openings...I bought a floppy cable
since the old one wasn't long enough (power supply is though) but when
I looked at where the old cable goes into the Falcons motherboard it
doesn't look like it is removable...or do you have to literally pull
the old cable out of its connector and then re-pin the new one? Also,
do yo know of anyone here Stateside that sells for System Solutions
besides Toad...the PowerUp kit would be very convenient...One more
thing, have you installed an internal CD-ROM? I really want to add one
but I'll have to find a power supply and then the cables to hook to
the SCSI connector on the Falcon...If you've already put one in, any
words of wisdom, caution, or general advice!? <grin> Thanks in advance,
and don't you just love the Falcon in a case with room to breath! :)

3452. Oasis2 - Comment List #34

Newsgroup: comp.sys.atari.st
Date: 1996-05-26 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <77413325_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 144455
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

Oasis Report - D.M.Brewood - Updated: 26/05/96 # 034 (posted to
== testers)

Comment list posted to the following official beta testers:

Colin Bernau (colbee@tyndale.apana.org.au)
David Greenhough (green@spirit.demon.co.uk)
Ron Keen (beta@gaiasys.demon.co.uk)
Neil Martin (Neil@yr-ynys.compulink.co.uk)
Gary Priest (gary@the-gap.demon.co.uk)
Dave Levi (Dave@levihome.demon.co.uk)
Phil Yeadon (Phil@yeadontt.demon.co.uk)

Test Machine: Falcon 030 running MagiC4 with Thing, operating in 1024 x
768 x 16 colours.

This comment list will also be posted in the NeST N.SUP.OASIS_ICE
message echo on a weekly basis.

This data is based on the beta version(s) provided on:

ICE = 17th of May.
OASIS2 = 26th of May.

Package 2.01 is the last release version.
Package 2.02 will be the next release which is in beta test (various
stages).

New in ICE since the first official OASIS2 release:
==

2.01

- More TCP routines in machine code.
- Ftp bug fixed.
- Socket and Directory windows seperated.
- Debug q removed.
- ICE spead increased.
- News can now be sent without downloading news.

2.02

- IGNORE allowed in logon script to allow sending of multiple lines.
- IGNORE/n now supported (sends back a CR).
- ICE online clock disabled it the user runs on an (M)STe/ST-Book.
- IGNORE features expanded.
- Delay system implemented.

- Documentation updated.

New in OASIS2 since the first official OASIS2 release:
===

2.00

- Window re-draw routines completely recoded.

2.01

- More Redraw code modifications.
- Fix of Local Post bug.
- Documentation corrected.

2.02

- Problem with unregistered article headers fixed.
- Edit SIG problem fixed.
- When examining articles ready to post in the Internet window, after the
article is exited (using ESC) the initial window's contents are not
redrawn - fixed.
- When logging onto Demon with an existant HEAD.OUT file you no longer
get an error, the program now appends the data.
- Local Post bug with exit back to desktop may have been cured.
- GEMDOS seek error trapping added when posting a mail mime document
in the external editor.
- Inmail/Outmail flagging bug fixed.
- In the Outbound window the IP name is now shown in the same case as it
appears in the ICE.NET file.
- Redraw recoding completed.
- Postbox only saves when read state of an item changed.
- Table added into the OA_CODER.
- Documentation updated.
- New outgoing mail/news no longer overwrites existant mail/news items.
- More updates to the redraw code.
- Auto-add of user name to yellow page routines recoded.
- Yellow pages problems cured.
- Scrolling selection of user name bugs fixed.
- Errors in detection of 'from name' whilst processing email fixed.

New in ICE_NET since the first official OASIS2 release:
===

2.01

- Changes made to HELP dialogues.

2.02

- Support for additional flags added.

List of possible bugs discovered in ICE so far:
===

- Fix packet CRC problems.
- Fix PPP packet bug where carrier drops.

List of possible bugs discovered in OASIS2:
==========

- When 'New groups' is chosen the new groups are not added to the master listing as the process bombs out. The master listing appers to be lost but is still there as a backed up file.

- When expire mail in post box (marked items) is used sometimes gives two bombs and back to desktop but mail has been correctly deleted when oasis is started again.

- .BAD flaf not reset properly.

To-Do and Suggestion List:
==========

- Implement thread map for emails. [Will be implemented but after initial release]. [Phil]

- Update FROST to include: Use of full user names. [Dave/Daron/Phil]
: Implement ICE mail interface.

- Iconic control system for sending MIME multi-parts. [Phil]

- Implement stand alone Fronds (deamons):

- F.R.O.ST = Fidonet Reworked Operations ST. [Daron, Phil, & Dave]
- N.O.M.A.D = News Operation Moderation And Delivery (Moderation of newsgroups).
- P.A.L.M = Please Add Listed Mailshot (Mailing lists).
- C.A.M.E.L = Count And Manage Electoral Lists (Voting systems).
- = Autopost text file on a certain day each month

- Allow headers/messages to be selected via click and drag.
[Phil - maybe]

- When using the auto-locator when sending email messages it would be useful if a dialogue came up confirming the users name, and if more than one user shares that data (I have 4 Dave's in my yellow pages) then a selection dialogue should appear allowing you which user to select. This should just show the names available, not the full YPG's.
[Phil]

- Wanted: C include files for use with GFA MyDials dated 10/11/92; export.h & import.h [For Phil - obtained by Daron, awaiting feedback]

- Add in function key selection of the user. [Phil]

- Implement use of SHIFT HOME to move cursor to the bottom of the mail and news windows. [Phil]

- Add in skipping of newsgroups with unread mail similar to that used on the news headers. [Phil]

- Can dialogs be added in to OASIS2/ICE to support setting of the
following to allow fine tuning? [Dave]

```
attach asy AUX: 0 ppp sl0 32767 1500 110
ip ttl 64
tcp mss 1460
tcp window 11680
tcp irtt 3000
tcp syndata on
ppp sl0 lcp local mru 1500
ppp sl0 lcp remote mru 1500
ppp sl0 lcp local accm 0x000a0000
```

- Clean exit to Oasis2 - it is bombs trap the error and set the time back
to what it should be.

- In the Outbound window - Window header should change to show 'outbound'.

- With each release made of the program(s) include a HISTORY.TXT file
detailing what has changed since the last release.

- Include sets of working log on examples for different providers in the
package.

- Specifiy more than one pop number so if one pop is busy the next one
on the list is used.

- When collecting e-mail alter status window so we can see who its from
instead of who its to.

- Cursor selection of MIME items.

- Time / Datestamping of files.

- Show newsgroup file size in the Groups window.

- Support provider specific mail sending for those users with more than
one IP account.

- User defined 'quotes' header for news/mail.

Qasis / Ice FAQ's
==========

- Q: Can icons be added to those already used (as seen within the
toolbox)?
A: Yes - the TOOLS_LO.RSC and TOOLS_HI.RSC files may be edited to add
additional icons.

- Q: Can the subject be changed when replying to messages?
A: No, this is not allowed according to the RFC's.

- Q: What causes error OASIS FILE ERROR I:\OASIS2\NEWS\ARTICLES, and how
can it be corrected?
A: Try re-indexing the news group, sometimes the index gets corrupted
by drive fragmentation from a lot of unbatching and expiring. If

this fails, Wipe the group.

- Q: What do OASIS and ICE stand for?
A: OASIS = One Atari System Internet Software.
ICE = Internet Connection Extension.

- Q: How much is the registration fee for Oasis2 and ICE?
A: The registration fee is £30 pounds and gives a lifetimes
registration for OASISx, ICE, ICE_NET, and SPIDER.

- Q: If the email files get corrupted, how can this be fixed?
A: Delete the relevant .MIX file from the mail directory and when post
is selected the email will be reindexed.

- Q: I know that 'X-' reference lines may be added to the top of a
message manually to access things like Anon servers, but how can
these be added if for multi-part binary file transfers? Is it
possible?
A:

- Q: Why does my USR Sporster Vi not respond to the dialer?
A: For some reason the Sportster switches to numeric result codes when
accessed by ICE. Use ATZATV1 as your init string and it will solve
the problem.

- Q: Why does the redialer issue two ATZ's before dialing (giving redial
2,4,6,8 etc)

I don't know if my message of yesterday got out ok, but, due to some stupid cleaning up operations on my system I've lost my internet yellow pages for Oasis2 and therefore have lost the email address's of many friends out there on the net.

Therefore those souls who talk with me regularly can you please send an email through to me so I can get the system to add you back in to my pages.

Tnaks in advance.

3454. Monitor Problems

Newsgroup: comp.sys.atari.st
Date: 1996-05-26 00:00:00 UTC
From: ad329@james.freenet.hamilton.on.ca
Message-ID: <4o8nla$gve@james.freenet.hamilton.on.ca>
Source record: 144457
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Arrrgghhh!!! Just when I thought things were going good for me (I picked up a 1040ST at the local Goodwill for $5 figuring if nothing else I could use it for parts but lucked out because it works perfectly) my darn ST SC1224 colour monitor craps out on me.

When turned on the power indicator LED glows ever so faintly and that is all that happens.

Does anyone know what is likely the cause of this problem and a fix for it? If so, please E-mail me the solution (I don't subscribe to this group).

Thanks!

CRACKERS
(Drat from hell!!!!!!!!!!!)

By chance, are you trying to use SLIRP on BIX? SLIRP is BIX's gateway to direct Internet access. SLIRP supports SLIP, CLSIP and PPP and for the most part is auto-detecting.

I've been using SLIRP on BIX with STiK/CAB for a couple of months now and it works great. AAMOF, I was one of the original beta testers of this new BIX service.

> Hi, I thought a TV was a RGB monitor.

If you plug in just a TV, the Falcon will assume it's RGB and not VGA
from what I have gathered. But again, Atari RGB monitors can handle both
50 and 60Hz while American TV's can only handle 60Hz(European TV's can
only do 50Hz, but on the ST it's possible to remove the top and bottom
borders for games and stuff). IOW, to play all games including from
Europe you need a RGB monitor.

> Apparently VROOM030 switch automatically in 50HZ. I did try once an auto

> so on the Falcon..... BOMBS AWAY!!!!! (The prg was go5060.prg or
> something like that)
> What should I do?

Seems that the Falcon has a different video setup than the ST. To change
the frequencies on the ST, you go down the hardware. Any European demo
coders might offer a more detailed suggestion?

Erm.. if you have the unregistered version then 500 fax lines is
2.5 inches of fax (200 lpi). Don't expect to get to the end of the
first page.

I believe the next version of CoMa will have a workaround for the
page errors given by USR modems.. but for the moment just
set the switch to 'Ignore Page Errors' if you have a USR modem.
(And register ;-)

Martin Byttebier (Martin.Byttebier@ping.be) wrote:

: which version are you using? The early Neodesk4 and Geneva releases
: contains many bugs. A lot of then are removed in the release 4 of
: Geneva and release 3 of Neodesk 4.

According to the message in the "About" section, I'm using Neodesk 4 release 002. I haven't checked on Geneva yet, because I don't want to install it until I'm sure my system won't crash even worse. I believe the diskette label says that it's version 1.01, though. I also have the Release 004 patch diskette.

: I'm sure you can find these releases on many ftp-sites (maybe
: ftp.toad.net) or you can purchased then from Gribnif software for US$5
: each.

I'll look on that site to be sure. Also, someone else gave me the e-mail address for Gribnif, so I'll be in touch with them shortly.

: I haven't any experience with Mountain reader II. I tried the demo
: version on my TT and it seems to work (at least it starts without
: bombs).

I registered MR II about 1.5 years ago. As to the crashing problems, it had none when I was using Neodesk 3.04...

: An other possibility is that some acc or autoprg doesn't work very
: well with Geneva/Neodesk.
: HSmodem6, JarXXX.prg, Neoload.prg and Selectric won't give any
: problems. I don't known Gbell, Silkmouse and Datalite.

Gbell lets you configure sound samples for various functions, a la Mac. It currently works, except for any sounds loaded into registers that Neo is using. Silkmouse is a mouse accelerator, and Datalite an HD doubler.

: Also make sure that the fastload flag of the first (not sure of that)
: and last acc is set to off. The same goes for the last autofolder prg.

That's already more programming knowledge than I have, but I'll give it a look, with the help of a more knowledgable friend.

3472. Using a SCSI drive on old Berkeley Microsystems BMS-100

Newsgroup: comp.sys.atari.st
Date: 1996-05-26 00:00:00 UTC
From: akw <akw@prgone.com>
Message-ID: <31A8B4D9.65A3@prgone.com>
Source record: 144475

Question for any hardware types out there:

Has anyone ever had success with attaching a SCSI drive to the Berkeley Microsystems BMS-100? The orignal BMS-100 kit came with the ACSI-to-SCSI board (presumably the namesake of the BMS-100) and the SCSI-to-MFM Adaptec 4000a board. I would like to bypass the Adaptec and simply drive a SCSI drive directly; but have no software nor the technical know-how to write a driver to do so.

Any ideas?

SLIrP is a SLIP emulator. It emulates a SLIP connection over a shell
account (text only connection). It can be quite hard to set up. What I
have to do is log into my account and then run SLIrP before I can use any
web browsers, ftp, etc. Ummm... there are a lot of FAQ's on the WWW
about fixing up problems with SLIrP/TIA emulators.

The author of SLIrP can be reached at danjo@blitzen.canberra.edu.au
(yes, he goes to the same uni as me!) :)

Hope this helps,

: in the city and be whisked away to another part of it..anyone
: know what it is (not Hunter either)?

Sounds a lot like A.G.E. a vector 3D game with sprite-based enemies/people in the agme. The method of (rapid) travel was achievved by obtaining a transit pass, then goign to the main square of the city and selecting one of the destinations within the arch-ilke structure. That was only for travel within the city however, not between cities. The means of getting to one of the islands was different. It was through the arches too, that you went to meet the Mayor of the city -- a repulsivve, Jabba the Hut type of creature, in the beginning of the game.

: Not a definitive 'best ever' list...just 'old faves'...anyone else
: want to put theirs up....?

1. Alternate Reality (City and Dungeon). My favourite RPG if all time,
ever, on any platform. 8-Bit Atari version was best, however.
Pity the Dungeon was never made on the ST.
2. The Ultima series, to up and including part IV. They went downhill
from there.
3. Fate: Gates of Dawn, an RPG I've been looking for for years, but have
never found; a friend had i once, and I played it and thought it was
just remarkable. Havn't seen it since, and only one person I've ever
talked to before has heard of it, and he didn't hve it, either.
4. Ishar: Legend of the Fortress. Slow, but very detailed.
5. Turrican I and II, classic platform/shooters.
6. Another World. Definitely an innovative game, if a little too easy.
7. Elite and Frontier: Elite II. Just excellent space adventures.
8. Captive and Knightmare. Two more excellent RPGs by Tony Crowther.
9. Pushover and Pushover II: One Step Beyond. Hideously addictive
puzzlers.
10. Legend of Faerghail. Another excellent RPG.

I'd probably be remiss without offering honorable mentions to games like
Dungeon Master, Lemmings, Tiny Skweeks, Millenium and Deuteros,
Corporation (which would have been _much_ better if it had better
controls), Epic, Masterblazer, Magic Pockets, Gods, Metal Masters, No
SEcond Prize, Trex Warrior, D/Generation, Psyborg, Prime Time and Big
Business, Xenomorph, and Day of the Viper.

You got to be kidding.. $2800 for an 040 box and $3200 for an 060 box in 1996!
Does this include a monitor?

Whats so special about outdated ST software? $1899 buys a GateWay Pentium 133
system and PowerComputing PowerCenter PPC604 plus a software bundle..

What ever happened to Power with out the Price?

The best way to connect an EZ135 to your Atari (if it is not a Falcon or TT) is the Link 96 from Hard- und Software Entwicklung! It is a complete SCSI-2 host adaptor with parity and arbitration! It is the best ever made! Together with the newest version of SCSI-Tools (from 11.April 1996), CD-tools (from 13.April 1996), HDDRIVER, you can just connect ANY SCSI component to your Atari!

For more information, contact me!

Jan Dooms (jandooms@tornado.be)

From: Jan Dooms <jandooms@tornado.be>
Message-ID: <4o9ef8$8k5@tornix.tornado.be>
Source record: 144597

Hey!

If you want to boot from the ZIP-drive, that is no problem at all!
It has SCSI ID 5 or 6 but with a little boot-disk in your drive A and a program that initializes your harddisk and than a program that lets you boot from the C it is no problem! I do it like that now, you need that disk in the drive before you start, but thats a small issue!

For more info, contact me!

Jan Dooms (jandooms@tornado.be)

From: hallvart@sn.no
Message-ID: <31a86482c6612@sn.no>
Source record: 144601

Since I've seen several postings here where people have asked "what does
this error message mean..." I've decided to post my TOS error list here.
It's also available by FTP at:

ftp://ftp.sn.no/user/hallvart/atari/info/tos_err.txt (2 Kbytes)

Hallvard

====================== file start ================================

TOS error messages
----

message no. meaning of message
---------- ------------------
1 general error
2 disk drive not ready
3 unknown command
4 CRC error- disk checksum wrong
5 bad request
6 seek error- track not found
7 unknown media- bootsector wrong
8 sector not found
9 out of paper
10 write fault
11 read fault
12 general error 12
13 disk write protected
14 media change detected
15 unknown device
16 bad sector (verify)
17 insert other disk (request)
32 invalid function number
33 file not found
34 path not found
35 too many open files
36 access denied
37 invalid handle
39 out of memory
40 invalid memory block address
46 invalid drive specification
49 no more files
64 GEMDOS range error- seek wrong?
65 GEMDOS internal error
66 invalid executable file format
67 memory block growth failure

BOMBS and what they mean
----

no. of bombs explanation
------------ -----------
1 not applicable
2 bus error (user does something the ST doesn't permit)
3 address error (usually error in program)
4 illegal instruction (two prgs using same memory space)
5 division with zero
6 CHK instructional error
7 TRAPV instructional error (usually ROM error)
8 conflict with a privileged command
9 trace vector error
10 line 1010 instruction- line 'a' error
11 line 1111 instruction- line 'f' error
12 not applicable, reserved
13 not applicable, reserved
14 format error
15 unitialized interrupt vector
16-23 not applicable, reserved
24 vector 24 error (might be 68901 and/or GLUE chip)
25-31 vector 25-31 error
32-47 bomb trap instruction vector error
48-63 not applicable, reserved
64-255 interrupt vector error

PS. a large number of bombs might be the total of several errors

From: Billy D'Augustine <azog@worldnet.att.net>
Message-ID: <31A85F45.14C6@worldnet.att.net>
Source record: 144602

Phil Hough wrote:
>
> I've got MultiTOS and have been reading about how its not the MiNT
> part thats slow, but the AES. This leads me to believe that MultiTOS
> includes MiNT. Is this true ???
>

MultiTOS uses the MiNT kernel, but uses AES.SYS for any AES related function. It's the AES.SYS that makes MultiTOS MultiTOS, and without AES.SYS, you just have plain MiNT.

There are AES replacements for MultiTOS, like XAAES, and I've had mixed success with it...

> Also can I use the MiNT part to run Un*x software ??
> If so how.

You need to compile it, it won't just run. I've successfully compiled several Unix programs, like strings. Make sure the makefile you use is based on BSD (I think!), as that'll give you the best chances of compiling. In any event, you'll probably have to edit header files no matter what...

3489. KickOff2 Players...

Newsgroup: comp.sys.atari.st

> port to serial port?

Yes, it should work.
This is after all how MACs are able to communicate with Bulletin Boards
running on any system(even an Atari :^)
just run terminal software on the Atari and the MAC, with a null modem
cable connecting the two serial ports. Set up one to send, one to
receive.
good luck.bonne chance

Is there anyone who are running SOFTPC who have tried to get any contact
with the modem via the serial ports?

I would be VERY interested in being able to flash my USR Courier modem
from SOFTPC, and not have to move the modem to a PC every time. Anyone
who knows if this would be possible?

Greetz!

>>I think all the specifics of Thing have been discussed here.
>>Whatever. It was the whole negative addittude towards translating
>>_anything_ that made me :(.

I think the problem was not so much with the atual translation, but
the way in which the program was translated and distributed without
the author being even asked.

The question to ask yoursefl is if a program like HSModem 6 comes
along in german, and a lot of english speaking people can't understand
it, and you can. Do you translate the software for yourself, then
contact the author before distributing, or do you contact the author
first ???

I think what we have learnt from this thread so far is that you really
should ask the author first... arguments arising from his answer can

then be dealt with.

In the case of Thing and the author saying No, because its already being translated is pretty silly. The author should have been asked, and the person doing the translation should have told the author that they should get a new translator, because the current one is too slow, and maybe even offered themselves !

As for the argument that a shareware version of Thing existed and that anybody could try it out, even though it was in German I do not think is valid. If you can speak german well enough then fine, use the version, but I think most of the population can't. For them using the German shareware version of Thing is about as easy as using a program where all the menus have no text in them at all.

There is no reason to stop the distribution at all. However numerous emails and letters to the people saying 'we would like a version in english' should have been sent, and a few offers for translation.

If in the future people want to translate software please don't stop, its the only way we will get more atari software, but before you do stop to think and ask the author what they want.... after all it is THEIR software.

ATb.

A.G.E was as I recall quiet an absorbing game...:

didn't you move around in a space ship type thing, following long(ish)
pathways to get to the different parts of the city (one way a church
AFAIR, part of some cult group !).

Also as I recall you had to collect pods for Air, fuel and armour
(coloured Blue, red and green) which were floating around.

I used to have the game before I sold it (after playing it for months
and months), however I never read a review of it anywhere, nor did I
see it for sale in any magazine adverts (remeber the ones in STF and
mags like that, that had tonnes of ST games listed for sale !?)

Hope you find it... it was very good !

These look just like the specs for the Hades and Medusa !!

What about the DSP ???

DSP IMHO is vital to a new computer... after all it will add backward
compatibility with the Falcon, which will become the standard atari
(after all not many people have 3200US$ to spend !!!).

It also allows processor intensive stuff to be done in parallel with
the CPU, even if you have 120MIPS it would save a re-write of software
just so that the CPU can act as a DSP emulator !

Message-ID: <Pine.LNX.3.91.960527124312.15965A-100000@zodiac1>
Source record: 144478

I've just received a mail from my friend who makes and sales those IDE interface for ST's. So last news are as below:

There're two versions of it:
o) only for hard disks, you can connect to it only one hdd or two hdd's the price is 75$,
o) for both hard disks and cd-rom's, you can connect only hdd, only cd-rom, hdd + hdd, or hdd + cd-rom. the price is 85$.
Of course it's without shipping.

How does it work?
Simply: you plug the interface into cartridge port, connect to it hard disk(s) and/or cd-rom(s), install the driver on hdd and that's all.

Important! there's no power supply for devices on this interface /from where?/ So you have to get a feeder for them.

Personally, I've been using cheaper version of the interface /hdd only/ for more than a year. It works without any problems with my Caviar 1210 /WDAC1210-00F/. The transfer is:
about 900kB/sec reading
about 350kB/sec writing /tested with HowFaST/

I received few emails asking about getting only the circuit diagram of the interface. That's not possible - the cartridge is an invention of my friend and he earns on it. And anyways, there're 2 GAL's in this interface programmed by my friend. I don't think many ppl can program GAL's at home. So you have to buy the whole unit.

If anyone is still interested in buying it, please write me an email for details.

Well we have some powermacs here and in actual use (even telnet sessions)
they are way, way, *way* slower than my old ST. Macs must have the most
inefficient OS in existence - even worse than DOS/Windows95. Their number
crunching ability is good, but they also crash as much as my ST - which
couldn't have memory protection as it only has a 68000! Bearing in mind
that you don't have anything useful to say, *get lost* or at least go to
.advocacy!

If you use an Atari ST and Korg M1 keyboard for MIDI recording,
I need your help. I need an Atari sysex dump program and sysex data
for the Korg M1's factory default patches. I deleted my M1's factory
patches by mistake and need to restore them via the sysex utility and
sysex M1 data. Please respond if you have these programs.

I'll be glad to pay you for your trouble.

Thanks,

Jim

I was just browsing using CAB and there is a site which holds the sysex
data you want, at http://www.gate.net/~jsexton. I would have done
it for you but I dont own an M1 and im not sure exactly which files you
need. I downloaded 1 factory preset file in HQX format without any bother
though. Assuming you have CAB you can get them there. I think the program
to extract HQX files is fairly widely available on the net.
Even though you are offering money this information has been bought to you
for free without any strings attached. I'll never get on, you know.

From: aa778@cleveland.Freenet.Edu
Message-ID: <4oclcc$914@madeline.INS.CWRU.Edu>
Source record: 144485

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST.
I am also open to trade offers. E-mail me your list.

HARDWARE

Atari STacy4 $700.00
4 MEG RAM or best offer
52 MEG SCSI internal hard drive
720 3 1/2" floppy
External Power Supply
Corduroy/nylon carrying case with handle and shoulder strap
Has standard ST ports. MIDI, Parallel, Serial, Mouse, Joystick, DMA, Monitor
Has built in track ball, but if you wish you can use a mouse
Has built in backlit LCD 640x400 mono screen.
You can hook up either an external color or mono monitor.

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. $25.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $90.00

MISC

GE Soft Mighty Mic TT/32 4-32 Meg TT RAM Board.
0 RAM Installed Best Offer
TT RAM board that can hold 4-32 Meg of RAM. Board works but
when the machine gets hot the system bombs. With board removed
or system cold, system does not bomb. May be a MMU chip?

Translator ONE by Data Pacific, Inc. This is a hardware box that
connects to the ST to allow the ST to read MAC and IBM floppies directly.
This is a hardware only device, just plug it in and forget about it.
This came out before Specre CGR for the software only MAC emulator for
the ST. $25.00

SOFTWARE

NeoDesk 3.0 by Gribnif Software. This is the replacement desktop for
the ST computer. This is a great program for owners of ST's with versions
lower than TOS 2.06. Allows you many features like background picture,
placement of programs and custom icons on the desktop.
Comes with original books, but not original diskettes. (They got destroyed
by water damage). $10.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $3.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Dragonflight by Thalion. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

Omega by Origin. Complete with box, docs, and disks $10.00

Wayne Gretzky Hockey by Bechesda Software. Complete with
box, docs, and disks $10.00

Crystal Castles by Atari. Disk only $5.00

BOOKS

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00

The Essential Atari by Jerry Willis. A How to use your Atari ST.
Includes Installing and setting up, Selecting and using software,
and Programming with ST BASIC, LOGO, and GEM $5.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

Hi

Does anyone know where I can get hold of ST Games software these days ?
I'm especially looking for Another World and Robocop 3.

3510. Re: 3D Calc + and PFM Plus - still supported?

Newsgroup: comp.sys.atari.st
Date: 1996-05-27 00:00:00 UTC
From: iwb@cix.compulink.co.uk
Message-ID: <Ds2qzB.HFr@cix.compulink.co.uk>
Source record: 144487

3d Calc+ is being supported by the FaST Club in the UK - at least they supply an updated version (v3.20). They can be contacted at: stclub@cix.compulink.co.uk

Hope this helps!

Ian

3511. Oasis 2 registration

Newsgroup: comp.sys.atari.st
Date: 1996-05-27 00:00:00 UTC
From: daveb@mbha.demon.co.uk
Message-ID: <833223760_OASIS_NEWS@mbha.demon.co.uk>
Source record: 144488

I have thought long and hard about posting this but I thought that others may have had the same experiences as myself and keeping quiet doesn't resolve any problems.

I thought it was a good idea. I thought I would support the Oasis team, so I sent off my 20 quid last Monday.

On Saturday I got an email from Phil, enclosing a key file. It didn't work. I sent an email to Phil saying it didn't work, and got a reply back (also on Saturday) saying it was my fault for using several different email addresses (that's what Oasis does isn't it?). He said I should change the Oasis set up to match the name and email address he had built into the key file. Then it would work. I did. It didn't.

So I wrote to Phil (again Saturday), saying that in my view it doesn't make sense to register software to a named user *and* a named email address, since oasis allows several users addresses, and I may want to change providers anyway (I am on 1st June). A fair point I thought, but as I have come to learn about Phil, no answer is a frequent deafening reply.

No answer.

I wrote again today (Monday) politely enquiring what progress on the key file.

No answer again, the (unfortunately) most common result of mails to Phil in my experience. Yes he is busy, yes I expect he gets a lot of mail. But no, this is no excuse for bad manners.

I started off being impressed with the quality of Oasis 2. Having had a chance to use it, I have rapidly got fed up with being logged off arbitrarily, with getting bad packets, and with the mail reader refusing to display any mail with a Mime line in the header, even if it is a bog standard email. Also numerous other bugs and things that don't work.

I have asked Phil for my money back. I will continue to use AtariNos because it just isn't worth the hassle. I am not angry, I have just changed my mind.

Hi, I'm a woman and I can tell you that I really love the games made by=20
Reservoir Gods, such as Tautolgy II, Skyfall, Double Bubble. There's=20
also a new game that will be coming out maybe in the fall, called Willie's=
=20
Adventures. If you want a preview of this last game, there's a demo on=20
the net that can give you a little sneak preview. As for the first three=
=20
games, they are what you call reflection games. I personally hate the=20
shoot-them-ups and the Super Mario types. Tautology II belongs to the=20
Mahjoong type, but nicer tiles and competitive option. Skyfall, a=20
tetris/columns type game, is really worth checking out...there are=20
obstacles and you can turn the columns diagonally. Double Bubble is=20
fun...a little dragon that blows bubbles to kill his enemies...might=20
sound babyish but not as easy as it seems. There's also a pinball game=20
with three different levels that is really well done...it's called=20
Starball. The graphics on all of these games are quite nice and bright, an=
d=20
the games themselves are very addicting. Any more questions, let me=20
know. =20

We want real computers, Peter. . . ones that don't break, ones whose warranties
mean something (unlike Apple), reliable machines (unlike Apple), from people
we can trust (unlike Apple and Gateway). We also don't like being chained
to a single producer of hardware, like Apple effeectively remains.

Power without the price still exists. Unfortunately, the greatest price we
have to pay is putting up with your off-topic blather.

Guess you got tired of the Amiga groups beating you up and came back for the
same treatment here, eh?

Keith can you give the exact procedure for this, as I've been trying to do the
same for use with Thing, all seems well, that is the picture is correctly
shown within IC4, but on loading into Thing it changes the palette.

I'm looking for coders for the Atari Mega/ST/e. If anyone is interested.
The name of the group is Synalogue. We are composed of four members
currently, David Toews, Ryan Goolevitch, <myself>, and Eric Hennessy.

Trideja, for the moment (a MOD group, Dave, Ryan and myself), makes up
the better part of the group. You may visit our WebSite (Netscape 2.0)..
http://www.wimsey.com/~johng/trideja.html

Please email or for details/credentials, if interested.

Thanx!

You WONT need a SCSI 2 cable, the EZ135 uses an old fashioned (SCSI 1) 50
pin Centronics connector, not a new MINI 50 SCSI 2. All you need for the
Falcon or TT (which have a built in SCSI interface) is a 25 pin to Centronics 50
cable.

By the way, the EZ135 is an IDEAL hard drive for the ST/TT/Falcon.

I have TWO of them.

Gustavo Comezana <comezana@math.psu.edu> writes:

>Another question about the SyQuest EZ135: is it fast enough to use
>with Cubase audio?

I would think the EZ135 is marginal. It has something like a 10 or 12 ms access speed, but you can get hard drives down to 7 or 8 ms now. The EZ135 could be a tad too small for direct to disk recording too. It should be fine for MIDI files, but digital recording takes lots of disk space.

George

You can use an Amiga mouse that has no switch, if you are willing to take
it apart and swap two of the wires in of the cable. I can't remember which two,
but maybe someone else can help there.

Just a warning here.
Diamond Edge, while being an excellent program(I've used it for years) does not work with HD
Driver. So if you will be moving to that driver, for its own reasons or because you will be using Outside, be advised that Diamond Edge will not work. Correct, supplied with HD Driver,
will work.

Anybody know what Georg is up to on the fix for the EMS driver for the FX? I want my 14 (16) megs back!

Dan

3530. UK: For Sale.

Newsgroup: comp.sys.atari.st
Date: 1996-05-28 00:00:00 UTC
From: Spencer@mettav.demon.co.uk
Message-ID: <13253_Spencer@mettav.demon.co.uk>
Source record: 144415

The following items are for sale:

VideoMaster digitiser and colour splitter for the Falcon. 60 UKP

Tape Streamer. 512Mb QIC mechanism with 11 150+250Mb tapes. 120 UKP.

MagiCMac 1.23, turn any Mac (68030 or better, or a PowerMac!) into an
Atari compatible mean machine. 70 UKP

Calligrapher Gold. WYSIWYG wordprocessor. 25 UKP.

EIZO 6500 Flexscan monitor. 21" multiscan monitor, suitable for use
on TT or any VGA type output (does TT high or SVGA, but monochrome
only). 300 UKP, buyer collects.

Proflight flight simulator (for STFM, STe or TT, doesn't work on the Falcon
:-(10 UKP

STWorld magazines, issues 24 - 26, 29 - 32 and 34 - 53.

Vidi-ST video digitiser, this is only the digitising cartridge and no
colour splitter so £20 is the suggested price (inc. P+P)

View II, file viewing program. Designed for integration into the desktop.
Handles many file types (SEQ, pictures, samples, text, etc.) 8 UKP

Timeworks 2 plus two manuals on Desktop Publishing with it. 20 UKP
(inc. P+P).

Epson FX80 emulation cartridge for DeskJet, Deskjet+ and Deskjet 500.
20 UKP.

Printer Port buffer module, made by Paul Rossiter for HP Deskjet
owners. 10 UKP (inc P+P).

Star LC10 Dot Matrix printer. Nothing, but buyer collects!

STFM 512k RAM expansion. Postage and packing only.

E-Mail me with any offers for items you may want.

Spencer

Neodesk has had two patched updates since then. You'll need both to upgrade
from release 003 to release 005. I've found them in the CIX support area for
the new distributor (Titan Designs) but I don't know where they'd be
available for ftp - sorry.

MB> Run and Malloc from STRAM
MB> Ref: TT + Fast RAM + FPU, ST High
MB> ==

Can I make a request from all people who post Gembench results. Whatever you think of benchmarks in general, the figures it dishes out are compared to the *bare* machines *without* NVDI unless user sets are used. Unless you are benchmarking NVDI itself, any results shown that include NVDI are rigged to make the results worthless for the application you're testing. If it's possible to produce results referenced to an NVDI'd setup it wouldn't be so bad, but can we please all use Gembench properly so that we can understand the results without reinterpretation?

MB> RAM Access: 1.905 68%
MB> ROM Access: 1.985 71%

What on earth's happening here? NVDI might reduce these figures by 1 or 2% so the rest is down to N.AES ?

Thanks for posting. Concerning access speed, I did know what the
access speed of the EZ135 was; the question aimed more at what access
speed you *need* to run Cubase Audio satisfactorily. Also, about size:
form what I understand, a 135 Mb cartridge should be able to hold
about 5 minutes of 4-track, 50 MHz audio; is this correct? And while
we are on the subject of system requirements, will Cubase Audio run on
a Falcon with an SM124 monitor, or do you need a VGA for it?

Yes, you need that cable. The cable you've got with the drive is 50 pin (SCSI-1)
to centronics 50 (SCSI-1) pin.
I have a tower falcon and therefore I have taken the EZ out of it's box and
put it into my falc into one 3.5" space.

> By the way, the EZ135 is an IDEAL hard drive for the ST/TT/Falcon.

Yes. I have only tested playing up from the EZ.
It can at least manage 8-tracks.
I mean I have a 2 minutes samples which I, with CAF, played 8-tracks simultaneosly
without any problems.

Best regards

I'm sorry. I have to retract the last statement. peter's conduct indicates
that he is unlikely to use either toilet paper or toothpaste!
Reflecting on his chosen name, "sinclap" one ponders:
sin - short for sinus
clap - a venereal disease
Does this indicate peter spends time with his dick up his nose? Possibly he
couldn't fit it in his mouth? There was probably too much crap in there to
fit!!

Hi

It takes approx 12 meg per minute in stereo (6 meg mono 50 kHz).
So with 5 min, 4-tracks is approx 120 meg.

50 Khz not 50 Mhz!!

You can happily run CAF with SM124. It's even better because it's
going faster when you run in monochrome.

3540. Monkey Island I disk unreadable

Newsgroup: comp.sys.atari.st
Date: 1996-05-28 00:00:00 UTC
From: Nicholas Bales <bales@garonne.stortek.com>
Message-ID: <31AAC542.6847@garonne.stortek.com>
Source record: 144425

Help!

I've been playing Monkey Island for a while and it seems like I'm nearly finished. The problem is after all these years the 3rd disk seems to have become unreadable just at the point when I get to meet with LeChuck...

The problem file is called DISK3.LEC and is 707Kb large.

Could somebody please mail me this file somehow? Otherwise I'm going to have to shoot my brains out on the deck of LeChuck's ship

I have the original box, manual, disks, with the codewheel and everything, so this is not piracy.

Thanks a lot,

Nick

3541. Upgrading a 4 Meg ST with new ROMS

Newsgroup: comp.sys.atari.st
Date: 1996-05-28 00:00:00 UTC
From: andre@ice.cb.hva.nl
Message-ID: <4oefpv$1tc@ice.cb.hva.nl>

> COURAGE and JUSTICE
>
> Z soldiers
>

I have also been trying to find an equivalant, on the Atari platform,
to the Chineese word processors/translators that are available for the
IBM and MAC platforms.

The best thing I have found is "Chindex", a translation aid written by
Hartmut Bohn, PhD, in Bonn, Germany.

I contacted Hartmut and got a full version of the program last fall.
Unfortunately, I ran out of time and haven't worked with it for a
while, so I don't remember as much as I'd like about the research I
did on it (and other programs, docs, pubs and such I found at the
IFCSS site).

If I remember correctly, it uses either the Big Five or GB format, i.e.,
two 7-bit ascii characters (ascii 0-128) are used to point to a bit map
in an array (a Chineese character or other "picture") which is then
printed to the screen and can be sent to your printer. This is a
"standard" method to encode Chineese for electronic transmission; I
think you can even get several daily or weekly net-newspapers out of
Hong Kong which Chindex (or another "decoder") will then render to
screen in proper Chineese Characters.

I was able to find a "dictionary" document at ifcss, which I then
organized into sort of a hard-copy code book. That is, the ascii pairs
were ordered in logical, ascending order (like, aa,ab,ac,
...az...etc.). Each pair represents a particular character.

Although there are thousands of Chineese characters which are represented by the "code", it is not limited to Chineese, exclusively. The first part of my ascii-pair sequence "code-book" printed out characters in Kanji, Russian, English, and something similar to the "dingbats" font- uh, that is, hearts, stars and stuff- as well as lines and patterns that can be used to contruct graphics.

I don't have Hartmut's current e-mail address, he moved to Bonn in December from Trier, but I'm hoping to contact him this summer. Or, please, try contacting him yourself! ;^)

Ifcss should,at least be a good place to start your search.

A demo of the program is available
at:

ftp.ifcss.org

Full and partial ftp mirrors of this directory:
[send email to cyl@ifcss.org to be on this list]

CHINA, Beijing: info.bta.net.cn:/pub/software [partial]
Guangdong: info.gz.gdpta.net.cn:/pub/mirror/chnsoftware [partial]
ShaanXi: ftp.xanet.edu.cn:/pub/chinese-soft [partial]
Taiwan: ftp.edu.tw:/Chinese/ifcss/software [full]
ftp.ntu.edu.tw:/Chinese/ifcss/software [full]
iiiafs.iii.org.tw:/Chinese/ifcss/software [full]
HONG KONG,: ftp.cuhk.hk:/pub/chinese/ifcss/software [full]
JAPAN: ftp.fedu.uec.ac.jp:/pub/china/software/IFCSS [full]
SINGAPORE,: ftp.technet.sg:/pub/chinese [full]
USA, California: cnd.org:/pub/software [full]
New Mexico: phaiakon.nmsu.edu:/pub/software [full]

If you are like me, you neither speak, read, nor understand Chineese... but you still have a use for it, and would REALLY like a program that could translate English into Chineese and vice-versa. Or, alternatively, something that would allow you to "construct" Chineese characters by assigning a "brush-stroke" to each of the keyboard characters; use the brush-strokes to create a character; then move on to the next character with the "tab" key (or some such other key stroke).

I haven't found anything like that for Atari. I was just trying to help out my next-door neighbors (Chineese immigrants). We can now use the code book to look up each character they need to print out; I can then create a document of the ascii-pairs that stand in for the Chineese characters in the document they wish to print; and, finally, Chindex can convert the ascii-pairs back to Chineese characters and print the document.

Not the most efficient or desirable system, but it can be done. Please,if you find something better, let me know!! As I said, my explorations and research into this problem were cut short, but the problem is still there.

Hope this helps a bit.

Bob

Not really sure exactly what you mean by 'full distribution'.

MiNT is usually distributed as source , although there are some binaries around.
MiNT on it's own is not much use, you need lots more tools & utilitites.

I would reccommend you get a hold of Knarf's German MiNT Distribution, as
it's the most current distribution of a complete MiNT package (AFAIK).

I'm not sure where this can be found (somebody else jump in here), but it
contains all of the tools & utilities that you should ever need.

The setup scripts are in German, but follow the indtructions & you should
get a fully set up MiNT in about I hour. Lots of documentation included
(English).

As a rough idea, the complete package is split up into several sub
packages; you can D/L what you want. Full package includes GCC compiler,
MiNT + Networking, & X11 .

: Reservoir Gods, such as Tautolgy II, Skyfall, Double Bubble. There's
: also a new game that will be coming out maybe in the fall, called Willie's
: Adventures.

Anyone interested in the game "Willie's Adventures" should take a look at
our (New Beat Development) home page for more information. You will also
be able to find all new updates of it on the home page first.

A new version of the game is on the way and will possible be released at
the NAS convention in Gothenburg in June. Until then, take a look at the
preview from February, available on the New Beat Development Home Page:

http://www.kuai.se/~dhedberg/

Take care...

Hi

Due to Rod McCall graduating this year I am taking over the running of the
Falcon Support Pages (though I don't have a Falcon!!). There is a link to
it from my homepage (URL on .sig). A couple of requests are for

1) Updates to the Falcon Developers List
2) Updates to the Falcon Games list

Please email responses to me.
All other comments & suggestions most welcome :-)

Davy

> DON'T GIVE A DAMN!!! POQ!!!

s > If you don't give a damn, why did you respond?

'Cause you're a weenie with no life?

This forum was actually pretty quiet since Roger The Sad
Sheppard was read the riot act by the New Zealand government for his
net abuse in comp.sys.atari.st. Please refrain from bringing back
the type of non-objective, abusive, "my computer is better than your
computer = I do so have a bigger one than you do" that Roger was
wont to wibble on about - it's not welcome here, and does nothing to
further the lot of Atari users, who are just simply trying to get on
in an admittedly Micro$oft/Bi66 6ates-driven world, and need to help
each other out in any way we can.

It may come as a surprise to you, Sinclap, that some of us
PREFER to stick to this platform. And why not? To us, we can get a
lot done on a system that DOESN'T require excessive hardware
overhead, including your beloved Macs (no slur meant to Macintosh,
as it's my second choice of platform). The fact is, there's still
computers being made, there's STILL software support, and there's
STILL people using the computers already out there. You wouldn't
believe it here in Canada, where used Ataris are actively sought out
by first-time computer buyers because of their reputation as a
non-hyped, no-nonsense computer platform that gets things done.

We're here - and we're not going to dry up and blow away, as
you're eventually going to when you discover that you're screaming
in a vacuum here. You are a virtual joke, Sinclap - go away.

Ha ha ha ha ha ha ha ha. Apple's warranty is hell alot better than the one by
the ST clone maker such as on site repairs.. Oh, you have must been
moonlighting recently considering there is more than two producers of the Mac
OS.

3552. WTB: Old Infocom games

Newsgroup: comp.sys.atari.st
Date: 1996-05-28 00:00:00 UTC
From: a00121@alumni.laurentian.ca
Message-ID: <1996May28.100820@alumni.laurentian.ca>
Source record: 144437

Hi,

I'm looking for some of the old Infocom text adventure games in
their original game packages circa 1982-1984. The titles I'm looking for
in particular are the ones that often came in a fairly large folder
(sometimes contained within a box). Two of the games were released in
unusual "boxes" which featured a recessed white face mask on one and the
other in the shape of a flying saucer

The games I'm looking for:

Deadline (folder)
Starcross (flying saucer box
Suspended (recessed white face mask box
The Witness (folder
Planetfall (folder)
Infidel (folder)
Enchanter (folder)
Sorcerer (folder)
Seastalker (folder)

I'd prefer if the games' contents were complete but will still
purchase if incomplete so long as you still possess the folder or box.
Software for any computer system will do whether it still works or not. :)

Thanks,
Dave
a00121@alumni.laurentian.ca

3553. Atari 1040ST for sale

Newsgroup: comp.sys.atari.st
Date: 1996-05-28 00:00:00 UTC
From: John Klassa <klassa@ivc.com>
Message-ID: <31AAF777.3742@ivc.com>
Source record: 144438
Cross-posted to: triangle.forsale,comp.sys.atari.st

I've got an Atari 1040ST for sale. It was in good working
condition last time I used it. It's got a meg of RAM, an
internal floppy drive (720KB) and both kinds of monitors
(color and mono). I'd rather not ship this thing (it's more
trouble than it's worth), so if you're willing to come get
it (Raleigh, NC area) you can probably just about have it
(give me a gift certificate to the Outback steakhouse & we'll
call it even :-)).

(For those who don't know, it's *not* IBM compatible.)

All offers considered... I'd really just like to make room
in my attic.

Thanks-
John

So why doesn't one port the Atari OS to the PowerPC. LERP should be released to the clone firms in September that will provide for high power boxes using off the shelf parts by early '97' that can run more than one OS at a significant reduction in cost. If you have a browser read the latest at MacWeek.com/

I have asked Mr Sinclair-Day if he is an educator. I would like to help him with some of the educational issues that he has raised from the propective of a parent. He has not responded as yet. I have only three or four hours each week set aside to work on computer projects. I can't understand how a person can spend so much time on computer issues that don't directly involve using their computer at home or the one issued them at work. He does not appear to be an educator because there is a lack of didaticism is his arguments. Teachers and those in associated fields usually have a very good grasp of this tool as they have to deal with the occasional recalcitrant student. He is decidedly NOT a computer person as he does not use the power of computer or manual word processing (grammer, syntax and spelling) and the tools associated with pine or the other e-mail processors. I know several educators who would take great umbrage at his remarks about the profession of education. This is simply not done within such an adversarial context. That alone would indicate that he in not an educator. I almost have to believe that he happened upon these Usenet newsgroups, replied or posted a few hasty observations and now is "caught up" in the heat that he has created and can't find his way out of the kitchen. Maybe we should lighted up on him a little and gently show him a way out of this electronic morass that he has created for himself. I know that most people are basically "good" (whatever that means!) and he would (at the very least) agree with that observation. Agreeing with this, he might graciously accept a helping hand from fellow computer users. This would be all that I could offer at this point. Mr. Sinclair-Day?

If you dont't get a more productive response than this, all I can say is try it and see what happens :) Ive never had a computer blow up on my by trying more/less memory :)

It also depends if that extra 512K will jump a barrier to allow another resolution, you may be stuck with resolutions that require either 2 or 4 megs or higher, and no intermediates like 2.5..

Source record: 144449

Well, I've got my Falcon now...equipped with a DeskTopper, TT-Touch kit for the keyboard, 810 meg hard drive, and I'm having problems with Oasis. I was using Oasis v1.35 on my TOS 1.4, AdSpeed equipped, Mega 4 ST with no problems at all...so I copied the entire folder (via floppy) to my Falcons hard drive...guess what? It won't work! I'm using a slower modem but I changed that in STARTUP.NOS and DIAL.TXT so I don't know...I then started with a fresh Oasis archive and did everything from scratch with the same results...I'm using HS_Modem v6 to take care of the serial port. Here is what it does:

ATZ (no problem-it returns the "okay" from the modem)
ATDT 8866086 (PROBLEM! It returns "no carrier")

and yes, I've got a phone line with a carrier...I use CoNnect v2.46 with no problems at all to call anywhere I want...

I tried playing with STARTUP.NOS and DIAL.TXT for over 7 hours last night adding and shortening delays here, there, everywhere...but I can't get it to go past the point where the modem goes off-hook (you hear the dial tone!) before it says "No carrier" It never dials the number...then it loops and does the same thing again...In STARTUP.NOS, do I have to change the part where it sets up the port, buffer, devs, ect,..? Please help! :)

As I have said before all new versions should be available from my web page as soon as they are released.. (some are actually released on my web page)
As Far as I know no new versions of Cab/cab.ovl and Antmail have been released as of yet past Cab 1.2b cab.ovl 1.12 and antmail 0.7.6 although there are beta versions higher than this and they will be released soon.

Nick.

There's another one which has now been reported by at least two different people, so I'm rather surprised to find it isn't listed here. ICE won't talk to my modem at all - it sends what I assume is supposed to be the init string, but nothing happens and I end up having to reboot. After a bit of experimentation involving a PC and a null modem, I've managed to create a log file which will be sent to Phil pronto. Basically, the first character ICE sends to the modem is a null. This is bad.

"For some reason"?! There's no earthly reason why this should happen, unless there really is some problem with ICE. (Which there is.)

You should just be able to connect the SCSI output of the BMS host
adapter to a SCSI drive and use the existing software. If you've
tried & failed, let me know what kind of error you're getting.

PETER SINCLAIR-DAY (sinclap2954@cobra.uni.edu) wrote:

: GREETINGS..

I have asked Mr Sinclair-Day if he is an educator. I would like to help him with some of the educational issues that he has raised from the propective of a parent. He has not responded as yet. I have only three or four hours each week set aside to work on computer projects. I can't understand how a person can spend so much time on computer issues that don't directly involve using their computer at home or the one issued them at work. He does not appear to be an educator because there is a lack of didaticism is his arguments. Teachers and those in associated fields usually have a very good grasp of this tool as they have to deal with the occasional recalcitrant student. He is decidedly NOT a computer person as he does not use the power of computer or manual word processing (grammer, syntax and spelling) and the tools associated with pine or the other e-mail processors. I know several educators who would take great umbrage at his remarks about the profession of education. This is simply not done within such an adversarial context. That alone would indicate that he in not an educator. I almost have to believe that he happened upon these Usenet newsgroups, replied or posted a few hasty observations and now is "caught up" in the heat that he has created and can't find his way out of the kitchen. Maybe we should lighted up on him a little and gently show him a way out of this electronic morass that he has created for himself. I know that most people are basically "good" (whatever that means!) and he would (at the very least) agree with that observation. Agreeing with this, he might graciously accept a helping hand from fellow computer users.

: You got to be kidding.. $2800 for an 040 box and $3200 for an 060 box in 1996!
: Does this include a monitor?

: Whats so special about outdated ST software? $1899 buys a GateWay Pentium 133
: system and PowerComputing PowerCenter PPC604 plus a software bundle..

: What ever happened to Power with out the Price?

Clearly it never occurred to you that an 040 based TOS machine will certainly run circles around an 040 based Mac. I've used an 040 Mac, and it wasn't pretty - in fact, it was about as quick as a 512k TOS 1.0 520ST in actual use.

I suppose that you'll never know the experience of an operating system that is free from excessive size and processing power overhead. Macs and PCs are "memory-hoggin', disk-accessing fools". Funny how the hard disk on my Atari computer is only accessed when I tell it to (i.e. loading a program or saving a file) when PCs and Macs rely so heavily on virtual memory and disk based operating systems that performance goes to hell.

I like Macs, but until the OS goes on a serious diet, I'll stick to a system that responds quickly, my Atari, that is. Otherwise, I'll wager that a MedusaT60 or DirecT60 performs in ways that you simply cannot comprehend.

Keep your short-sightedness to yourself, eh? I imagine there are few in the Atari newsgroups that benefit from your attitude.

No problem about replying, I just wish I could help a bit more. From what I
remember of the cable (I never really examined it) it seemed to be a
plug-in job, and I would guess that the new cable may well have just been
jointed to the existing cable.

> do yo know of anyone here Stateside that sells for System Solutions
> besides Toad...the PowerUp kit would be very convenient...

Sorry, I really have no idea about anyone other than Toad.

> thing, have you installed an internal CD-ROM? I really want to add one

> the SCSI connector on the Falcon...If you've already put one in, any
> words of wisdom, caution, or general advice!? <grin> Thanks in advance,
> and don't you just love the Falcon in a case with room to breath! :)

I have actually made a concious decision to keep my CD Rom as a separate
unit, so that I can use it with my STFM should the Falcon ever fail or have
to go away for mods or whatever. Again System Solutions sell a complete kit
of parts for a SCSI set up. This includes a new power supply, cables for
two drives and the SCSI 2 cable for the price of GBP 90.00.

Again not cheap, and you could get all the parts cheaper from compuer and
electronic stores I am sure. The big problem is that you would need some
instructions, and although System Solutions instructions are pretty crap
most of the time, they are better than nothing.

I really wish I could help some more, but I just don't have the knowledge
or indeed the experience in this particular matter. About the only thing I
have done with the 'topper, is move the floppy into a more forward position
from where the engineer had put it. This was very easy, but I never really
looked at anything else whilst the box was apart! I was in too much of a

hurry to get the Falcon back together and working again!

Anyone else reading this thread who might know a bit more, please chip in
with your advice :-)

ATB
Mike

Source record: 144506

>My impressions as a Registered user is so far so so!
>Some of the problems i've had so far :
>1) NVDI 3.02 doesn't work with it

Works okay with NVDI4 . A brief look basis opinion only here but it did
seem to be able to deal with non-st res a bit better and display corruption
was better than v1.xx , however I am no fan of the non standard implimentation
of Window gadgets and AES stuff in general ,sorry guys its awkward and lacks
functionality :-(

>4) You can't list your modem speed as a default like in 1.35

I thought this was just me beeing stupid but I spend quite a while searching
for options to set port ,port speed ,mtu ,mru etc ...

>5) On my Falcon if I logged in with Fpatch 2 it would loggin at 9600
> but if I used Hsmodem6 it logged in alright .

mmm , I always use hsmodem so didn't see 1st problem however I never managd
to get a working connection at all even with hsmodem ... CRC checksum problems
and connects only a 19200 suggesting to me it was connections through modem1 port
and not modem2 , I have been told that using modem.cpx might help but that seems a
bit messy to me :-(

Those problems aside (and the fact that it blanks out the underlying windows when run
under magic and mint along with redraw problems with both and some illegal AES functions
I think its a marked improvement in implimentation over v1 . Still think they could
do with throwing away whatever GEM libs they are using myself.

He's not an educator. He's a librarian at the illustrious
University of Northern Iowa where he majored in corn-plucking and has
been unable to find a real job.

I have seen a number of his posts and he has never contributed
anything productive to any newsgroup. He is living proof that even the
Internet has hemorrhoids!

I had a similar problem once.
You have downloaded a corrupt disk1.zoo probably from hensa?
You need to download from the umich archive.
Well, the problem is that you are missing the passwd file in the etc folder.
Try creating your own passwd file (if you know how) else just download the
full version of disk1.zoo from umich.
The error arises because the program is trying to access a file that isn't there.

The current version AFAIK v1.04.
I don't have the changes/additions/improvements handy for the moment,
but I recomment strongly to get a update. The latest release I have (I
don't use it offen) is far more stable than the older version which
contains lots of bugs. The same goes for the early Neodesk4 releases.
If you want a list of the fixed bugs and changes just mail me. I'll
search for it.
Regards
Martin

>
>
Hello Jeff,

First of all I want to say that you certainly must go for the latest
release. The older ones contains to many bugs. That's why I've changed
to another desktop. The latest release looks more stable but again I
don't use it offen. At least I can use now my Internet prog (Oasis)
and my CD-ROM. With the first release it's was impossible to use these
things.

The fastload flag can easily be set with Neodesk. Just click once to
the desired prg or acc, then go to the "file menu/show information".
Now you'll see the different flag that can be changed.
Empty box=flag off
crossed box= flag on

In order to see the sequence of which the auto-prg's and acc are
loaded in the memory click on the "sort menu" and then on the "no
sort" item. Now you'll see the order of the files as they are on the
harddisk. To reorder click on the "reorder items" item, then place
the file you want to reorder above the file where you want it to.
That's all.

I hope you understand my broken English. I'm not used to write in
English. :-(

I am having trouble compiling STonX 0.6.5 under Solaris 2.5 using gcc
version 2.6.3. Make dies on the first function cpu.c:

```
gcc -fomit-frame-pointer -I/usr/openwin/include -DSTATFS_USE_STATVFS -DINLINE=inline -O3
-c cpu.c -o cpu.o
cpu.c: In function `execute':
cpu.c:634: `jumptab' undeclared (first use this function)
cpu.c:634: (Each undeclared identifier is reported only once
cpu.c:634: for each function it appears in.)
*** Error code 1
```

What's to do?

3592. Re: Cad3D - gem2ps converter

Newsgroup: comp.sys.atari.st
Date: 1996-05-29 00:00:00 UTC
From: J.B.W.Webber@ukc.ac.uk
Message-ID: <1555@kiwi.ukc.ac.uk>
Source record: 144364
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

If any one is interested, I have written a program to generate
postscript from the Gem files produced by hardcopy.prg for Cad3D
sequential image files.

You see the problem was that hardcopy produces shading by defining
a new fill pattern for each polygon - Ghostscript previews this
no problem - just a few minutes on the ST even for a 40KByte Gem file,
but an Apple Laserwriter was spending hours to produce a picture.

I have written a short Apl program that reads the Gem file and produces
a postscript file that uses greyscale half toning (it just counts the
dots in the fill pattern). The same picture prints in 30 seconds.

If you have an interest in the program, I will translate it to C.

cheers,
beau webber

> What's to do?

After poking around in the depths of my homespace, I found this file
which I wrote when I was trying to get STonX to compile, I'm afraid that
I don't know how relevant it is any more, but it might give you some ideas.

configure --x-includes=/usr/openwin/include --x-libraries=/usr/openwin/lib
copied config/sparc.h to config.h
added #define SOLARIS to config.h

BTW I have tried getting STonX to work on my Linux (PC boohoo) box, and
although I have managed to get the fonts out of my ROMS, all I get is a
busy bee on the screen! I have TOS 1.06 and I had to change something in
the tosfonts.c file to get it to find the right address for the fonts.
Has anyone got STonX to work on TOS 1.06 (or even 1.62?)

In the dial.scr add a
FIND= Session from
RESP= $GET_IP

Sould work fine.. to check look at the stik acc on the other stuff
menu then ip address this should be the number you have been given.

I want to buy either a Notator or Cubase package for the ST. I figured I'd whip out my MegaSTe and do some MIDI work with it and use it as a second midi station. I'm willing to pay a reasonable amount for it... so if you have either program and haven't been using it, I'll take it off your hands.

I'm looking for a complete package, w/ original disks and hardware dongles...

Thanks.

As far as I know, the bunch at Wizz. are the only Stateside repair
option for Falcons...Toad doesn't do them, which surprized me when
Ray told me...I've heard that they are quite good but keep in mind
that they do (or at least, did) charge $85.00 just to look at your
machine...then that will go towards whatever it costs to fix it..

It's been awhile since I talked to them, so you might want to get the
facts straight from them... :)

Hope this helps:

I'm not familiar with the Mega and it's fan, but .....

I doubt the drive itself is that noisy when it's not being accessed, the
fan is probably 90% of your noise. Try disconnecting the fan (for a short
time only) and see what you think.

Jameco Electronics (1-800-831-4242) has a variety of fans.
My favorite 12v (3.15 x 3.15 x 1) is the Panflo (#109081) 30 CMF
at a sweet 21.5 dba. ($7.95)

You can cut the speed (and noise) of a 12v fan considerably by
inserting a 47 ohm 1 watt resistor in one of the fan leads.
(2 Radio Shack 100 ohm, 1w metal oxides in parallel works too)
I have had this setup on my ICD FA-ST drive with a switch for full
speed (never use it). It's very quiet.

It makes me crazy to sit in front of one of those clones with the fans
screaming right in your face, how do people do it!

You're asking a lot to do any multitasking in 512K, and even 1 meg is a bit tight. If you're looking to do it for free, your best solution is MiNT and (IMHO) oAESis, a free multitasking AES which is very speedy. You may be able to run it off floppies, even, although I haven't tried, nor would I want too :) And TeraDesk should run (i.e., it worked on my TT for a while) under this setup.

I got a Supra 20 Meg. Plenty of room for MIDI, as long as I keep my sample
files on floppy. It chirps when accessed (but that's before or after the
really intense creative part, isn't it?) Other than that, it's pretty
quiet.

Yea those memory hogging OS's do more and costs less..If you want to be stuck with an OS that has not progressed in a decade you don't need anything higher than the 040!

It's sad that a 24 meg PPC 604 PowerMac is still below the the price of the 040 TOS buckle. So the memory issue is moot.

Is Java and other internet tools being integrated into TOS? If not, a serious competitive disadvantage and the consumers will turn thier nose..

The easiest option is to break out half of the plastic bars
across the fan output. This reduces noise and increases airflow. Then
you can also put a resistor in the power lead to slow the fan down slightly.

Check for the voltage drop in the fan leads after the resistor.
It might occur that the fan doesn't start (due to lack of initial current
impulse or some dust on it), if so you'll fry your power supply. I wouldn't
mess with the fan. Ragards!

I have been using Cubase Score on my Falcon for a very long time now,
and when I first tried Cubase Audio Falcon, it felt _much_ slower.
Why? Could this have anything to do with my setup, or is Cubase Audio
Falcon slower than Cubase Score?

s>
s> I currently have a terradesk setup, can I use this with a multitasking
s> OS? If not, are there any freeware/shareware preferebly (or very
s> cheap) desktop replacements around?

Simon, I have tried oAESis and xaAES and both of them have many things to recommend them. xaAES is definitely better-looking, but they're both faster than MultiTOS and both freeware. You'll need MiNT, the latest version you can get, and LOTS of memory (theoretically, you can do it in 2 megs, but that leaves very little for applications).

Teradesk probably works - I haven't gotten my MiNT setup right yet so I'm not really sure.

Hi,

s> The Mac is plenty expandable. Which model are you referring to? My
s> solid like a tank, thank you. Outdated software? HA HA HA HA! It's quite
s> when many of the Apple II apps are more useful than the ST ones..Thats what
s> call pathetic. And no future OS development? Ha ha ha ha, you must be out
s> the loop. Opendoc, cyberdog and quicktime vr...

I don't want to interupt your intelligent discussion here, but just
for a second. Ask yourself 'WHAT'S A COMPUTER?'. If you're clever
enough (which I don't doubt) you'll probably come up with something
similar to 'A COMPUTER IS A TOOL', rather than 'A COMPUTER IS A TOY'.
Right?

Personally, I use my computer to write music, do some wordprocessing,
and stay in touch with my pals on the internet. In my case, I have a
wealth of highly useable software (in fact more than I actually need)
to solve my needs. My Atari helps me beeing productive. That's it. I
know that the Mac also have excellent software, but I and many many
others are quite satisfied with what we've got.

What I want to say is, that these discussions are nothing but
worthless. You won't buy an Atari, and I won't buy a Mac. I don't
care, and you don't care.

I don't care what kind of computer people use. It's WHAT they are used
for, that's important.

The SCSI id does not necessarily indicate the devices place in the chain.
Try changing the device on id 0 to one that is free (eg 4) and make your
Syquest id 0. Everything _should_ still work without problems.

I think there is a Korg editor on Hensa. I'd personally approach Korg for
the presets 8).

3637. Mega ST fan, noisy HD's, etc.

Newsgroup: comp.sys.atari.st
Date: 1996-05-29 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4ogj24$39c@dodgson.math.psu.edu>
Source record: 144528

Hi!
Months ago I posted an article that initiated a discussion of possible strategies to reduce the noise made by the fan in a Mega. I saved those articles, but now that I have finally decided to try out some of the suggestions, god only knows where I put those files. I use my computer primarily for music applications, for which the constant whirring of the fan is quite distracting. So, if you have any palliatives that you know of, why don't you take a few minutes to post them? Your help will be greatly appreciated.

Also, and while we are on the subject of various noises, how about suggesting brands and models of really quiet HDs? I have a 210 Mb Maxtor that is rather annoying. I would consider replacing it with something quieter, so again, comments in this regard will be appreciated.

Gustavo

3638. is there a FAQ?

Newsgroup: comp.sys.atari.st
Date: 1996-05-29 00:00:00 UTC
From: walds@sasknet.sk.ca
Message-ID: <4ogra2$k3e@mongol.sasknet.sk.ca>
Source record: 144529

Please excuse my ignorance, but is there a FAQ for this group? I checked rtfm.mit.edu but couldn't find one. If there is one, or any good resource on earlier STs, please let me know where.

thanks
scott.walde@sasknet.sk.ca

: Any comments greatly appreciated.

: James

It's not Falcon specific, but Pacman on E's is good. Also the Ishar
games are good. I agree that the Reservoir Gods games are addictive.

For myself, I use Backwards and play a lot of ST games, like Civilization.

Hi!

I am just wondering if with the Link II and the HD Driver software from Toad Computers to use the Syquest EZ135 or the ZIP Drive 100 SCSI on the Atari STe. I don't care if it is an autoboot or not, but will it work okay. I already have a 100 meg drive and I may want to use it to transfer from computer to computer. Any information would be helpful. Thanks

Richard Wegner - richardw@dma.org

You raise a good point actually !

The FAQ used to be posted (in parts) on the comp.sources.atari.ST & comp.binaries.atari.ST newsgroups, but these groups are no longer available.

Who is the current FAQ maintainer, & where is it located ?

You got to "findstring" either the "from" or the "to" (depending on which
one is your IP address), thus consuming all the characters up to your
address, and do the GET_IP then.

Cheers Peter

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
####################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##########################################################################################
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
########################################
226 Transfer complete.
ftp>
```
---

* you can also use a 'wildcard' to get hold of single files or a specified selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this file or not, you can use the command 'prompt'. FTP will then proceed to get all the files that match your wildcard without asking if you want them.

Example:

```
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
```

_____

[4] Ending your FTP session

```
close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
```

Example:

```
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
```
---

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
```
--------------------------------------
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
--------------------------------------
```

* When doing a 'close' and re-entering a new FTP site you won't have to set up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then restart FTP.

>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
==========
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
==========
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands

! escape to the shell
$ execute macro
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file

```
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
```

```
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

>includes MiNT. Is this true ???

Yes, you will find in your folder either MINT.PRG or MINTNP.PRG [NP stands for No Protection - prevents using memory protection on 030 CPU's] which is the MiNT kernal.

If you still have your original files from MultiTOS, then it might be wise to upgrade the version of MiNT used [MultiTOS's AES will still work] to version 1.12, which provides more facilities than the 1.04 supplied with MultiTOS [external file-systems, and networking all need newer versions of MiNT]

>Also can I use the MiNT part to run Un*x software ??
>If so how.

MiNT provides simular system calls to Unix, and so it can be fairly trivial to port Unix software over to MiNT. Of course, the programs will be mainly text-based, unless you install the X-Windows port, or you spend a while and give them a nice GEM front end...

>BTW: I'm not interested at the moment in any network software, or web
>browsing or stuff, just simple stuff like disk formating, and other
>really simple software.

All the little unix utilities have been done, so you can have a shell which feels very unixy...

Most of the other stuff is networking stuff [in combination with Mint-net.]

The St's use a subset of SCSI called ACSI. You need an interface of some
kind.

>a 1Gb Seagate Hawk SCSI HD. There is no housing box or power supply
>for the hard drive, and no lead or adaptor to go from the back of the
>atari to the centurix connector on the SCSI drive. Any ideas on what
>we need, where we might get what we need (ideally in Europe) or are we

You should end up with a decent machine as all you need is a housing and
power supply to go with the adaptor. Try emailing
ssolutions@cix.compulink.co.uk or look at their site at
www.ssolutions.com. They're based in the Windsor area and have an
excellent reputation.

Ah ha, this I was not aware of, and it indeed could be related to the problem
I have with the Sportster. Have you tried the ATV1 tip so see if that makes
any difference?

>"For some reason"?! There's no earthly reason why this should happen,
>unless there really is some problem with ICE. (Which there is.)

Could be related to the above.

BTW ICE is Dave's baby so the log file should be sent through to him not Phil.

3656. Atari TT/JAZ drive combo?

Newsgroup: comp.sys.atari.st
Date: 1996-05-29 00:00:00 UTC
From: tking@emr1.emr.ca
Message-ID: <Ds6BnC.Bor@emr1.emr.ca>
Source record: 144547

I am running a project studio and have an Atari TT030 running Cubase Audio for the CBX-D5. I have a Quantum 2.1 Gig hard drive and I have purchased an Iomega 1 Gig JAZ drive with removable cartidges. The Company (Iomega) doesn't really want to hear the word Atari from what I could gather in my lone phone call to them. They are only interested in PC/Mac questions. Too bad. At any rate I have tried the ICD SCSI utilities and when I boot with them the computer sees the JAZ but the format utility will not format the cartridge for use. If anyone has any ideas I am interested. If anyone at ICD sees this post(assuming they can read) a reply would be nice! ICD is totally committed to electronic telephone gadgets and it's a shame that Mr. Orwell was so on the money with some of his writings. At any rate thanks for listening and "Hope someone finds this message in the bottle".

Yes, Atari "simplified" the board layout to reduce costs.

> I'm getting REAL tired of being told that what happened to me didn't
> happen, or that I'm a liar. If no one can offer USEFUL, HELPFUL comments,
> why not just shut the Hell up and forget about it?

I didn't say you're a liar, and I did not want to imply that with
anything I said. If it sounded like that, it's probably my bad
English. Sorry for that.

Anyway, it's a fact that a lot of people never had problems upgrading
their SH205 hard disks, and that I am one of those people. I recommended
this upgrade in my book on hard disks for the Atari, and I never heard
about problems from my readers.

It's also a fact that Adaptec's controller documentation does not mention
any kind of limitation for the size of the hard disk. (Well, you can
probably not have much more than 1024 cylinders or so, and only a limited
number of heads, but that's about it.)

I see only two possibilities here:
- You have a somehow different SH205.
- Something went wrong when you upgraded or partitioned the SH205.

From what you wrote and what I've seen in the past, I think the latter
is more likely.

> Simple. I formatted the first time with AHDI and it agreed that I had 44

> repartitioned to 16/16/8 and filled up the drive as far as possible. Sure
> enough, when I had copied about 5 megs onto the D: partition, I started
> getting "Drive Full" messages.

That's interesting. If you actually got the desktop's "drive full"
(or whatever it may be phrased like) message, it means that the partition
actually was only approximately 5 MB in size. If it had been the ROMs
that were somehow different or buggy, you wouldn't get such a nice,
clean and precise error message, but rather a diffuse "data corrupt"
message since the ROMs do not and cannot know anything about partitions.

So I suspect that partition D: actually had been created with a size
much smaller than the 16 MB that you specified in your partitioning
program, i.e. it didn't do what it should have done.

> ICD host adapter on the ACSI chain and formatted with ICD's drivers,
> partitioned 5/16/16 and whatever the leftover was. No joy, so I

"No joy" - what exactly happened when you tried that?

> Simple. I formatted the first time with AHDI and it agreed that I had 44
> megs, but would not allow me to partition beyond 20 megs; so I hooked up my

How did the WINCAP entry look like? In the WINCAP file, you can associate
a default partitioning scheme with a given hard disk. Maybe you used
a 20 MB default partitioning scheme? What exactly did HDX do when you tried
to partition beyond 20 megs? Did you get an error message? What were the
partition sizes? What are the physical characteristics of the drive
(cylinders, heads)?

================================================================== =

====== Computer Virus Catalog 1.2: Freeze Virus (31-January-1991) ====
Entry..............: "Freeze" Virus
Alias..............: ---
Strain.............: ---
Detected when.......: October 1988
where......: Helmond (Netherlands)
Clssification.......: System (bootsector) virus, overwriting
Length of virus.....: 512 Bytes
-----------------------Preconditions---------------------------------
Operating System(s).: Atari TOS
Version\Release.....: All versions
Computer models.....: All Atari ST
------------------------Attributes-----------------------------------
Easy identification.: The words : $487A,$0010 can be found in the boot
sector at Positon $100, or in memory at
:phystop-$300+$100 (all: hex).
Type of infection...: Executable bootsectors are not infected.
Infection Trigger...: Execution of BIOS disk functions.
Media affected......: The virus infects drive A and B.
Interrupts hooked...: Timer interrupt installed for damage; hdv_bpb
changed to infect bootsector of new disk.
Damage..............: Every second the timer-routine increases a delay
counter by 1 and then counting it down to
zero; this will slowdown the system.
Damage trigger......: When the virus is booted.
Particularities.....: If harddisk SH204 is connected, the virus
causes an address error and will not be
installed.
Similarities........: The same installation routine as MAD virus; only
different damage action and damage trigger.
----------------------------------------------------------------------
Countermeasures.....: Make sure that virus is not in memory; modify
last byte in bootsector to another value.
Standard means......: Clear all bytes in bootsector beginning at
offset 30 (decimal).
-----------------------Acknowledgements-------------------------------
Location............: Virus Test Center, University of Hamburg FRG
Classification by...: Thomas Piehl
Documentation by....: George R. Woodside
Date................: 31-January-1991
===================== End of FREEZE Virus ============================

=== Computer Virus Catalog 1.2: "Gauweiler" Virus (31-January-1991) ==
Entry..............: "Gauweiler" Virus
```

```
Alias(es)...........: ---
Virus Strain........: ---
Virus detected when.: November 1990 (?origin)
where.: Kassel, FRG (?)
(when/from where VTC received the sirus code)
Classification......: Bootsector virus
Length of Virus.....: 510 Bytes
--------------------- Preconditions ---------------------------------
Operating System(s).: Atari-TOS
Version/Release.....: 1.0, 1.2 ,1.4
Computer model(s)...: All types of the Atari ST series
--------------------- Attributes ------------------------------------
Identification......: At the end of the boot sector, following text
"AIDS" and "Gauweilers Rache V 3.0 4.7.88";
at the begin of bootsector: $52F6498A (hex).
Remark: Dr. Gauweiler is a Bavarian politician
well known for his resentments against people
seeking asylum in Bavaria.
Type of infection...: Infects bootsector of the disk A, if it is
regarded to be uninfected, or if an old
version of this virus is on bootsector (V2.0).
Infection Trigger...: Check if bootsector is executable.
Media affected......: Infection of disk in drive A.
Interrupts hooked...: BIOS-trap used and changed by this virus.
Damage..............: Infects the bootsector of the disk, if it is
regarded to be uninfected; clears first
9 sectors of track 0 with the FAT.
Damage Trigger......: If counter at start of virus + 6 modulo 32=0;
value depends on number of infections.
Particularities.....: ---
Similarities........: ---
--------------------- Agents ----------------------------------------
Countermeasures.....: Programs that calculate bootsector's checksum
and modify it, if = $1234. Then, the sector
is regarded as not executable. The suspected
more dangerous second part of the virus might
not be recognized because it does not need
to have the correct checksum.
Countermeasures successful: ---
Standard means......: Write-protect the disk; write an easily
identifiable bootsector; "manually" change
the checksum to a value other than $1234.
--------------------- Acknowledgement -------------------------------
Location............: Virus Test Center, University Hamburg, FRG
Classification by...: Ralf Stegen
Documentation by....: Ralf Stegen
Date................: 31-January-1991

== 6 Atari-Viruses (ATARIVIR.A89: this document) ==
================================================================== ===
= This document contains the classifications of the following viruses: =
== 1) Anthrax = Milzbrand Virus =+=
== 2) c't Virus ==
== 3) Emil 1A Virus = "Virus 1A" ==
== 4) Emil 2A Virus = "Virus 2A" = mad Virus ==
== 5) Mouse (Inverter) Virus =U=
== 6) Zimmermann-Virus ==
================================================================== ===
== Remark: updates or additions sind last edition (July 31st, 1989) ==
== are marked =U= or =+= in column 72. We have problems to get ==
== viruses, since many users wish to exchange their viruses (like ==
== stamps) against our's, which we principally refuse: the Virus Test ==
== Center's ethical standard is, that we do not spread viruses! ==
================================================================== ===

================================================================== ===

========================================================================= ===
== Critical and constructive comments as well as additions are ==
== appreciated. Especially, descriptions of recently detected viruses =
== will be of general interest. To receive the Virus Catalog Format, ==
== please contact the above address. ==
========================================================================= ===

== Computer Virus Catalog 1.2: Milzbrand=Anthrax Virus (Nov.9, 1989) ===
Entry..............: Milzbrand Virus
Alias(es)..........: Anthrax
Virus Strain.......: ---
Virus detected when.: April 1987
where.: C'T (a german computermagazin)
Classification.....: Program Virus (Extending V.)
Length of Virus.....: 1222 Bytes
--------------------- Preconditions ----------------------------------
Operating System(s).: ATARI-TOS
Version/Release.....: All Versions of ATARI TOS
Computer model(s)...: All Atari ST models
--------------------- Attributes -------------------------------------
Wasy Identification.: if killing the FAT it shows six 'Viruses' on screen
the Virus body (readable with HexDump-facilities)
include the text : 'DIES IST EIN VIRUS'
(=`This is a Virus')
Type of infection...: Executable File infection(.PRG) extending
Infection Trigger...: all programs>1000 Bytes
Storage media affected: Infects programs on disks and hard disks
(in the actuell path)
Interrupts hooked...: ---
Damage..............: overwriting bootblock and FAT on disks A and B
Damage Trigger......: year=1987
Particularities.....: shows six 'Viruses' on screen
Similarities........: ---
--------------------- Agents -----------------------------------------
Countermeasures.....: Category 1.1 Monitoring Files: program which
monitors (attempted) changes of
files
Category 2: Alteration Detection: a program which
detects changes of given files
Category 3: Eradication: a program which erases
specific virus code from files
```

```
Countermeasures successful: ---
Standard means......: Write protect the disk
-------------------- Acknowledgement --------------------------------
Location............: Virus Test Center, University Hamburg, FRG
Classification by...: ---
Documentation by....: Ralf Stegen
Date................: Nov.9 1989
Information Source..: C'T April 1987
==================== End of MILZBRAND Virus ==========================
```

===== Computer Virus Catalog 1.2: c't-Virus (July 30, 1989) ============
Entry.....: c't Virus
Alias(es).....: ---
Virus Strain.....: ---
Virus detected when.: ---
where.: ---
Classification.....: System (=BootSector) Virus, Reset-resident.
Length of Virus.....: 512 Byte
---------- Preconditions ----------
Operating System(s).: ATARI-TOS
Version/Release.....: 1.0 (06.02.86), 1.2 (TOS 1.4 not tested)
Computer model(s)...: All types of the Atari ST Series
---------- Attributes ----------
Identification.....: ---
Type of infection...: The virus tests two longwords near the top of the
available memory at locations (memtop)-$200 and
(memtop)-$200+$A.
The first longword is checked for $12123456, the
second one for $07A31CDF. If one of these doesnot
match, the virus is installed.
The virus is reset-resident.
1st: Virus is copied to a new location in memory;
2nd: Virus's age is increased by 1.
Infection Trigger...: Each time a diskette is changed, the new one
will be infected.
Storage media affected: Infects only diskettes. Damages Hard disks.
Interrupts hooked...: No interupts used.hdv_bpb and hdv_mediach vectors
are changed for installation in the system.
Damage.....: Transient/Permanent damage:
A damage can occur only if a harddisk is connected
to the system. Because of an error in the virus,
the partition information will be destroyed, if
the virus tries to write to the harddisk.
Otherwise, the following message is displayed on
the screen after every 20th infection:
"ARRRGGGHHH Diskvirus hat wieder zugeschlagen"
Damage Trigger.....: Value of infection counter: every 20th infection.
Particularities.....: ---
Similarities.....: ---
---------- Agents ----------

Countermeasures.....: Programs that calculate the checksum and change
it, if it is $1234; the sector is then regarded as
not executable. (Category 1.3)
Countermeasures successful: ---
Standard means......: Write-protect the disk. Write a well-known program
to the boot sector; 'manually' change the check-
sum to a value other than $1234 .
---------- Acknowledgement ----------
Location.....: Virus Test Center, University Hamburg, FRG
Classification by...:
Documentation by....: Michael Gaudlitz
Translated by.......: Bert K�hler
Date.....: July 30, 1989
Information Source..: c't (Computer Magazine)
========== End of c't Virus ==========

===== Computer Virus Catalog 1.2: Emil 1A Virus (July 30, 1989) ========
Entry.....: Emil 1A Virus
Alias(es).....: "Virus 1A"
Virus Strain.....: ---
Virus detected when.: 1987?
where.: FR Germany
Classification.....: System (Boot Sector) Virus
Length of Virus.....: 512 Byte
---------- Preconditions ----------
Operating System(s).: Atari-TOS
Version/Release.....: 1.0, 1.2 (1.4 not tested)
Computer model(s)...: All types of the Atari ST Series
---------- Attributes ----------
Easy Identification.: Boot sector will not be infected, if first word
is $6038.
Type of infection...: Infects the boot sector of the disk, if it is
regarded as not infected.
Infection Trigger...: Each time a floppy disk is changed, the new
disk will be infected.
Storage media affected: Floppy disks.
Interrupts hooked...: No interrupts used; diskvector hdv_bpb changed.
Damage.....: Infects the boot sector of the disk, if it is
regarded to be non-infected.
If the memory resident virus finds a fitting
key on a boot sector (first longword = $60381092),
then that sector is loaded and executed, regard-
less of the checksum. (Normally, the checksum
should be $1234 to indicate that this boot sector
is executable).
Damage Trigger.....: Keyword ($60381092) in other Boot sectors.
Particularities.....: ---
Similarities.....: See Emil 2A Virus.
---------- Agents ----------

Countermeasures.....: Programs that calculate the checksum and
change it, if it is $1234; then, the sector
is regarded as not executable. The suspicious
(dangerous) second part of the virus might
not be recognized because it does not need
to have the proper checksum (see: Damage).
Countermeasures successful: ---
Standard means......: Write protect the disk.
Write a well-known program to the boot sector;
'manually' change the checksum to a value other
than $1234 .
---------- Acknowledgement ----------
Location.....: Virus Test Center, University Hamburg, FRG
Classification by...: Thomas Piehl/ Michael Nagel
Documentation by....: Bert K<unk>hler
Translated by.......: Bert K<unk>hler/Paul Drake (Racal-Milgo/TEMEX)/
Date.....: July 30, 1989
Information Source..: ---
========== End of Emil 1A Virus ==========

===== Computer Virus Catalog 1.2: Emil 2A Virus (July 30, 1989) ========
Entry.....: Emil 2A Virus
Alias(es).....: "Virus 2A" = mad Virus
Virus Strain.....: ---
Virus detected when.: 1987?
where.: FR Germany
Classification.....: System (Boot Sector) Virus
Length of Virus.....: 512 Byte
---------- Preconditions ----------
Operating System(s).: ATARI-TOS
Version/Release.....: 1.0, 1.2 (TOS 1.4 not tested)
Computer model(s)...: All ATARI ST Computer models
---------- Attributes ----------
Easy Identification.. First byte in infected boot sector is $60.
Type of infection.... Infects the boot sector of a disk, if it is
regarded as not yet infected (value other than
$60 in first byte) and increments a variable.
Infection Trigger...: Every access to non-infected floppy disk.
Storage media affected: Floppy disks.
Interrupts hooked...: No Interrupts used;
hdv_rw vector changed to infect new disks.
Damage..... Permanent Damage: overwrites Boot sectors.
Transient damage: After each 5th infection, the
screen is randomly shifted (upside down) or
inverted, together with a beep.
Damage Trigger.....: Random.
Particularities.....: Evidently, this is a "Demo Virus"; but it may
easily be changed to a dangerous one with only
moderate programming experiences.

Similarities.....: See Emil 1A Virus.
---------- Agents ----------
Countermeasures.....: Programs that calculate the checksum and change
it, if it is $1234; then, the sector is regarded
as not executable.
Countermeasures successful: ---
Standard means.....: Write protect the disk.
Write a well-known program to the boot sector;
'manually' change the checksum to a value other
than $1234.
Reboot the system with a 'clean' disk.
---------- Acknowledgement ----------
Location.....: Virus Test Center, University Hamburg, FRG
Classification by...: Ralf Stegen
Documentation by....: Ralf Stegen
Translation by.....: Bert K&#65533;hler
Date.....: July 30, 1989
Information Source..: ---
========== End of Emil 2A Virus ==========

```
== Computer Virus Catalog 1.2: Mouse (Inverter) Virus (Nov.11 1989) ==
Entry.............: Mouse (Inverter) Virus
Alias(es)..........: Ghost
Virus Strain........: ---
Virus detected when.: ---
where.: ---
Classification......: System (BootSector) Virus, Reset-resident,
Overwriting
Length of Virus.....: 512 Byte
-------------------- Preconditions ---------------------------------
Operating System(s).: ATARI-TOS
Version/Release.....: All Version of TOS
Computer model(s)...: All types of the Atari ST Series
-------------------- Attributes ------------------------------------
Easy Identification.: ---
Type of infection...: Self-Identification: The Virus tests adresse $140
for the first Virus instruction; virus installs
itself reset- and RAMresident if virus code does
not match.
Infection Trigger...: Each time a new diskette is inserted, the virus
will infect the new diskette.
Storage media affected: The virus infect drive A,B!
Interrupts hooked...: No Interrupts used.
Resetvector for installation changed.
hdv_bpb changed to infect Bootsector of new Disk.
Damage.............: Permanent Damage: Overwriting Bootsectors.
Transient Damage: Inverting Mouse Up-Down Moving-
direction.
Damage Trigger......: Damage Action after 10 infections. Always after
5 new infections,the Mouse Movingdirection is
```

again inverted.
Particularities.....: ---
Similarities........: ---
--------------------- Agents ---
Countermeasures.....: Programm that checks hdv_bpb-, Reset-vector if
adresse is not lower $400(Exception vectors)
(Category 1.2).
Programs that calculate the checksum and change
it, if it is $1234; the sector is then regarded
as not executable. Reboot the system with a
'clean' disk! (Category 1.3).
Countermeasures successful: Poke instruction 'move.l #$D6,d3' to
adresse $140 (this excludes Virus' installation).
Standard means......: Write-protect the disk.
Write a well-known program to the boot sector;
'manually' change the checksum to a value other
than $1234.
---------------------- Acknowledgement --------------------------------
Location............: Virus Test Center, University Hamburg, FRG
Classification by...: Thomas Piehl
Documentation by....: Thomas Piehl
Date................: Nov. 11,1989
Information Source..: ---
====================== End of Mouse (Inverter) Virus ====================

===== Computer Virus Catalog 1.2: Zimmermann-Virus (July 30, 1989) =====
Entry...............: Zimmermann-Virus
Alias(es)...........: ---
Virus Strain........: ---
Virus detected when.: 1988?
where.: FR Germany
Classification......: Program Virus (Extending V.)
Length of Virus.....: 1414 Byte
--------------------- Preconditions ----------------------------------
Operating System(s).: ATARI-TOS
Version/Release.....: All versions
Computer model(s)...: All types of the Atari ST Series
--------------------- Attributes -------------------------------------
Easy Identification.: Infected System: The virus checks if the Trap 1-
vector points to a certain byte-sequence. Infected
programs are recognized by enlargement of the file
length and by typical virus specific code.
Type of infection...: Program virus: the virus code is appended at the
end of the program; the loader table is adjusted.
Infection Trigger...: Every time when a program is executed.
Storage media affected: Floppy disks only.
Interupts hooked....: VBL-Interupt for time control.
Trap #1 to control program start.
Damage..............: Permanent Damage: the virus only infects files
with extensions PRG, TTP and TOS in the current

directory on drives A and B. The program's
startup-time is considerably increased.
Damage Trigger......: ---
Particularities.....: After installation in the system, the virus is
distributed every time a program is started from
